Real-Time AI Monitoring & Early Detection of Immune-Related Adverse Events: AI in Immuno-oncology
Thursday, May 2, 2024, 12–1 p.m. ET

About the Webinar
AI is being investigated for real-time monitoring of patients receiving immunotherapy for immune-related adverse events (irAE). Earlier and more accurate detection of toxicities can vastly improve patient outcomes. The first webinar in our series will educate participants on the current application of AI in irAE monitoring and detection, as well as discuss future applications of these technologies across the field.
