AI in Personalized Immunotherapies: AI in Immuno-oncology
Wednesday, May 15, 2024, 12–1 p.m. ET

About the Webinar
The vision of personalized medicine based on tumor-specific biomarkers comes closer to reality with each new scientific discovery. With the advent of AI, researchers now have a novel and expansive tool that can better analyze large-scale data sets for actionable markers that can fuel immunotherapy development and discovery. Attend this webinar to learn more about the novel application of AI in immunotherapy target discovery and how these advances could rapidly enhance clinical care.

Faculty:
Rachel Karchin, PhD
Johns Hopkins School of Medicine

Moderator:
Carsten Krieg, PhD
Medical University of South Carolina
