Opportunities and Implications for IO Using AI and Digital Pathology: AI in Immuno-oncology
Thursday, June 20, 2024, 12:30–1:30 p.m. ET

About the Webinar
Digital pathology is becoming an increasingly important technique for immunotherapy drug development and clinical care. As AI becomes further entrenched across the field of immunotherapy, researchers have begun considering how AI and digital may coexist for enhanced pathologic analyses as well as scientific and clinical decision making. The focus of this webinar will be to better understand the benefits and caveats of mixing AI and digital pathologic analyses across the field of immunotherapy.
