Social Determinants of Health with Large/Moderate Language Models on EHR Data: AI in Immuno-oncology
Tuesday, July 30, 2024, 1:30–2:30 p.m. ET

About the Webinar
Social determinants of health are becoming increasingly understood as having significant impact in immunotherapy patient care. Many of these determinants are captured in the electronic health record (EHR), but very few methods can effectively analyze these data to better determine correlations between determinants and immunotherapy outcomes. This webinar will focus on new, prospective methods to analyze health record data for social determinant indicators that could help enhance immunotherapy administration and access.
