Retraction Watch Co-Founder Ivan Oransky to Present AAPS Webinar, “Retractions Are On The Rise, But Not Enough”

Arlington, VA—Retraction Watch co-founder Ivan Oransky, M.D., will present the webinar, “Retractions are on the Rise, But Not Enough,” April 18 at 12:30 p.m. EST.

Oransky will discuss the significant increase in retractions over the past two decades, and why he thinks science is still not holding its publications accountable often enough. In 2000, there were 40 retractions within scientific literature. In 2022, there were almost 5,000 retractions.

In this webinar, Dr. Oransky explains the reasons for this substantial increase and why this number should be higher.

"Whether it is paper mills, faked data, or other misconduct that evades detection during peer review, publishers have come to realize that there is a growing problem in their midst," he said. "Retractions are a critical antidote for bad science, but they can also lead to mistrust. I look forward to sharing the lessons of more than a decade spent reporting at Retraction Watch."

The webinar is free and requires AAPS registration to access. The recording will be available for 90 days following the webinar; AAPS members can access it after this period.
