

ACCA QI HVAC Install versus Average HVAC Install

What's the difference between an HVAC system that comes with an ACCA Quality Installation (QI) certificate and the average HVAC installation?

Your Average HVAC Installation:

“Fingers crossed” quality

Did you know that studies have shown **70-90% of all AC systems suffer from compromised performance**, either due to installation issues or lack of maintenance? Unfortunately, the average HVAC system was likely not installed as well as it could have been!

Oversized systems that waste electricity and don't deliver home comfort

If your equipment isn't sized and installed correctly, it can short cycle or run inefficiently, wasting energy, money, and leading to uneven indoor temperatures.

Calling your contractor back to fix the job they did

It's frustrating to have to call an HVAC company back to your home days, weeks, or months after a new installation because something isn't working right. But this isn't uncommon for many contractors—even those who think they did a good job!

A significant investment without a guarantee of quality

HVAC systems are expensive, and for the amount of money on the line, wouldn't you want more than just favorable Google review or a “gut feeling” to help put your mind at ease about the work being done?

HVAC Installation with ACCA QI Certificate:

Tested and confirmed quality

The QI certificate process means you have third-party confirmation that your new HVAC equipment is performing to a high level. You'll know on the day of the install that your contractor did the work right.

Higher comfort, lower energy bills

Air conditioners that are installed correctly keep your home more comfortable while using less energy, saving you money on monthly electric bills and extending the lifespan of your equipment!

HVAC installations done right the first time

With a QI certificate, both you and your contractor will know the installation job was done correctly from Day 1, drastically reducing the likelihood of installation-related issues down the road.

Long-lasting ROI and added value for your home

Having an ACCA QI certificate is excellent proof that your home has a high performance HVAC system in it. The certificate can even be shared with home buyers and realtors if you decide to sell your home down the road.

Hot & Cold is a participating contractor in the ACCA Quality Installation certificate program because we believe that doing high quality work matters. Issuing ACCA QI certificates with new AC installs is just one of the ways we show it!
