Revision History

The following table lists the revisions of this document.

Table 1: *Revision History*

Revision	Change Description
Revision 01	Initial release.

This User Guide describes the features supported by Aruba Instant On 1.3.0 and provides detailed instructions for setting up and configuring the Instant On network.

Intended Audience

This guide is intended for administrators who configure and use Instant On APs.

The Instant On Solution is a simple, fast, and secure solution designed for small business networks. It is an affordable to own and easy-to-use solution that is ideal for the businesses with simple technology requirements and setups that do not have IT staff. The product offers the very latest Wi-Fi technology so that your business can have fast experience even in a busy office or store.

Instant On mobile app and web application in the Instant On Solution suite enables provisioning, monitoring, and managing your networks. Instant On offers the following benefits:

- Mobile app and web application based quick setup and faster network bring-up
- Ease of use and right-sized feature set
- Simple statistics to view the network health and usage
- Remote monitoring capabilities
- Simple troubleshooting

Key Features

The key features introduced as part of the Aruba Instant On app are:

- [Monitoring Site Health](#)
- [Configuring Networks](#)
- [Analyzing Application Usage](#)
- [Managing Clients](#)
- [Managing Sites Remotely](#)

Supported Devices

Aruba Instant On currently supports the following APs:

Indoor Instant On APs

- AP 11
- AP11D
- AP12
- AP15

Outdoor Instant On APs

- AP17

Whats New in this Release

This section lists the new features, enhancements, or hardware platforms introduced in Aruba Instant On 1.3.0.

New Features and Hardware Platforms

Table 3: *New Features in 1.3.0*

Feature	Description
Configuring an Instant On Device in Router Mode	An Instant On device can be deployed as a Wi-Fi router to the Internet when it connects directly to a modem.
Support for two new languages	The Aruba Instant On mobile app and web application are now available in two new languages— Korean and Traditional Chinese .
Blocking Application Access	Use the Instant On mobile app or web application to block specific application categories on a network.
Enhancements to Application Categories	The Instant On mobile app and web application provide enhanced visibility into the various application categories.
Enhancements to the Guest Portal	The Guest portal page now provides additional options to configure an External Captive Portal Page and a Facebook Wi-Fi login.
Enhancements to the AP Details Page	The AP Details Page now includes additional visibility and monitoring information over devices connectivity and Ethernet port activity.
Enhancements to the Initial Setup Workflow	The Instant On mobile app now includes additional help and troubleshooting information during the initial setup of a site.
BLE Troubleshooting	BLE troubleshooting happens automatically during the auto-detection of APs in the initial setup. If an error is detected you will see a message in the mobile App that helps you to troubleshoot any network or device related issues and complete the network setup successfully.
AP Hostname Included in DHCP Requests	Instant On APs add their names in DHCP requests, allowing easier management of the network infrastructure.
Visibility into Device Ports	You can now view the details associated with the ports used to connect the Instant On devices to the network.

This chapter describes the following procedures:

- [Downloading the Mobile App](#)
- [Setting up your network](#)
- [AP Configuration Modes](#)
- [Discovering Available Devices](#)
- [Accessing Aruba Instant On Application](#)
- [Managing Sites Remotely](#)

Downloading the Mobile App

The Aruba Instant On mobile app enables you to provision, manage, and monitor your network on the go.

To start using the Instant On mobile app, perform the following actions:

1. Download the app on your smartphone
 - To install the app on iPhone, go to [Apple App Store](#) and search for Aruba Instant On.
 - To install the app on Android phones, go to [Google Play Store](#) and search for Aruba Instant On.
2. Launch the Instant On application and follow the on-screen instructions to complete the setup.

Alternatively, you may choose to complete the setup on a web browser using the Instant On web application. For more information, see [Accessing Aruba Instant On Application](#).

Setting up your network

The Instant On Solution requires you to connect the Aruba Instant On APs to your wired network that provides internet connectivity.

Provisioning the Instant On Network

To provision your network, follow these steps:

Table 4: *Instant On Network Provisioning*

SL No	Steps	Illustration
1.	<p>Private Network Mode—Power on the Aruba Instant On AP using the power adapter or using a Power over Ethernet (PoE) port on a PoE capable switch. Ensure that the AP is connected to your network using an Ethernet cable (included in the box).</p> <p>Router Mode—Connect the E0/PT or ENET port of the Instant On device acting as a primary Wi-Fi router to the ISP provided modem using an Ethernet cable.</p>	
2.	Verify the LED indicators, to check if the AP is successfully connected to your provisioning network and is ready for you to configure, the LED indicator starts blinking alternatively between green and amber.	
3.	Download the mobile app on your Android or iOS device. For more information, see Downloading the Mobile App . As an alternative, you may choose to configure the Instant On AP using the web application. For more information, see Accessing Aruba Instant On Application .	
4.	Launch the Instant On application and follow the on-screen instructions to complete the setup.	

AP Configuration Modes

Before you begin to add devices to a site during the initial setup, you must decide the mode in which the APs should be deployed in the network. Aruba Instant On currently supports the following modes in which your Instant On access points can be deployed:

- **Private Network Mode**—The Instant On devices will be part of a private network behind a gateway or a firewall before reaching the internet. Use this mode if you already have a local network infrastructure in place that includes a DHCP server as well as a gateway or a firewall to the Internet.

Private Network Mode

The Instant On devices will be part of a private network behind a gateway or a firewall before reaching the internet. Use this mode if you already have a local network infrastructure in place that includes a DHCP server as well as a gateway or a firewall to the Internet.

Pre-Requisites

Before you begin to provision your Instant On AP, ensure that the following pre-requisites are adhered to:

- A working internet connection.
- A switch that is connected to the Internet gateway or modem.
- A DHCP server to provide IP addresses to the clients connecting to the Wi-Fi network. The DHCP server may be offered by the switch or the Internet gateway. This does not apply if you are configuring the network in NAT mode.
- TCP ports 80 and 443 and UDP port 123 should not be blocked by a firewall.
- The Instant On APs must be powered on and have access to the internet.

Configuring Your Instant On Devices in Private Network Mode

Follow these steps to add your Instant On devices to the network in private mode:

1. Connect the E0/PT or ENET port of the Instant On devices to your local network using an Ethernet cable.
2. Power on the Instant On devices. Alternatively, you can power on the devices using a Power over Ethernet (PoE) switch or a power adapter.
3. Observe the LED lights on the Instant On devices. It may take up to 10 minutes for new devices to upgrade their firmware and boot up. The devices will be ready to be discovered on the Instant On mobile app when the LED lights are alternating between green and amber.
4. Enable location and bluetooth services and set the Aruba Instant On app permissions to use location and bluetooth services in order to automatically discover nearby Instant On devices.
5. Review and add the devices to your network.

Router Mode

In the Router mode, an Instant On device will be connected directly to a modem supplied by your Internet Service Provider (ISP) and it will be your primary Wi-Fi router in the network. In this mode, the Instant On device will offer DHCP, gateway, and basic firewall services for your network.

Pre-Requisites

Before you begin to provision your Instant On AP as a primary Wi-Fi router, ensure that the following pre-requisites are adhered to:

- A working internet connection provided by your Internet Service Provider (ISP).
- TCP ports 80 and 443 and UDP port 123 should not be blocked by a firewall.
- The Instant On AP must be directly connected to the internet modem with no other device in between. It must therefore be the only AP connected to the internet. Other APs have to be powered down initially and added later through mesh using the extend network capability.

Configuring Your Instant On Device in Router Mode

Follow these steps to add your Instant On devices to the network in router mode:

1. Connect the E0/PT or ENET port of the Instant On device acting as a primary Wi-Fi router to your modem using an Ethernet cable.

2. Power on the primary Wi-Fi router.
3. Observe the LED lights on the primary Wi-Fi router. It may take up to 10 minutes for new devices to upgrade their firmware and boot up. The router will be ready to be discovered on the Instant On mobile app when the LED lights are alternating between green and amber.
4. Enable location and bluetooth services on your mobile device and set the Aruba Instant On app permissions to use location and bluetooth services in order to automatically discover nearby Instant On devices.
5. Tap **Find my Device** on the Instant On mobile app to begin searching the network for nearby devices.

NOTE: After the end of the search, if the mobile app detects more than one primary Wi-Fi router in the area, tap the **Resolve** tab to choose the preferred device as the primary router.

In the Router mode, the network can only be extended over-the-air. For more information, see [Extend over-the-air \(Mesh\)](#).

Discovering Available Devices

There are multiple ways to add an Instant On AP to a site during the initial setup. You may choose any of the following methods to add devices for the first time and complete setting up your network:

- BLE Scanning—The Instant On mobile app or web application scans for nearby devices through BLE and displays the APs discovered, on the screen. Tap or click the **Add devices** button to add the devices discovered to the site. Alternatively, click **Search again** if there are more devices to be displayed. If the BLE scanning fails to discover any devices in the vicinity, tap the **Add devices manually** tab and choose to add devices to your network by entering the serial number or by scanning the barcode of the AP.
- Serial Number— Enter the serial number located at the back of your Instant On AP and click **Add device**.
- Barcode Scanning—As an alternative to manually entering the serial number to add devices, tap the barcode scan icon on the mobile app and scan the barcode at the back of your Instant On AP.

BLE Troubleshooting

BLE troubleshooting happens automatically during the auto-detection of APs in the initial setup. If an error is detected you will see a message in the mobile App that helps you to troubleshoot any network or device related issues and complete the network setup successfully.

Multiple Sites

When you login to the Aruba Instant On mobile app using your administrator account credentials, the **My Sites** page is displayed if multiple Aruba Instant On sites are registered to your account. To view or manage the settings of a particular site, click on any of the registered sites listed on this page.

Account Management

To navigate to the **Account Management** page:

1. Click the **Account management** icon in the homepage of the Instant On mobile app or web application.

NOTE: The alphabet in the icon will appear based on the first letter of your registered email account.

2. Select **Account management** from the list to view the account settings. For more information, refer to [Managing Your Account](#).

Setup a new site

The Instant On application prompts you to set up a new site when you sign on to the app for the first time. The site must have at least one network which would be used as the main network. You can configure up to a maximum of 8 networks in a site.

1. To register a new Instant On site to your account:
 - In the mobile app—Tap the advanced menu (☰) icon and select **Setup a new site**. You will be redirected to the initial setup page.
 - In the web application—Click ⚙️ **Setup a new site** from the drop-down list. You will be redirected to the initial setup page.
2. Follow the instructions given in [Setting up your network](#) to add a new Instant On site.
3. If you already have more than one site configured, and would like to setup a new site under your registered account:
 - In the mobile app—Tap the advanced menu (⋮) icon in the **My Sites** screen.
 - In the web application—Click ⚙️ **Setup a new site** and select **Continue**.

Sign Out

Click on this field to sign out from your Aruba Instant On account.

Help & Support

Takes you to the **Contact support** page. Following are the available technical support options:

- **Help center**—Opens the Aruba Instant On documentation portal. For more information, see <https://www.ArubaInstantOn.com/docs>.
- **Support center**—Opens the Aruba Instant On Support Portal, which provides information on warranty and support policy for the product you selected and also the on-call technical support. For more information, see <https://community.arubainstanton.com/t5/Support/ct-p/Support>.

Support resources—Allows you to generate a support ID by clicking on the **Generate Support ID** button. The ID is then shared with Aruba Support personnel to run a diagnosis on your device.

Accessing Aruba Instant On Application

Ensure that your system meets the following device OS and browser requirements to access the Instant On mobile app or web application.

Mobile OS Requirements

The following mobile OS versions support the Aruba Instant On mobile app:

- Android 7 or later versions
- iOS 11 or later versions

Browser Requirements

The following versions of the web browsers support the Instant On web application:

- Google Chrome
- Mozilla Firefox
- Microsoft Edge
- Apple Safari

Create an Instant On Account

Follow these steps to create an Instant On account:

1. Launch the Instant On mobile app or web application.
2. Click **Create an account** to create a new Instant On account.
3. Enter an email ID in the **Email** field. The email ID should not be associated with another Instant On account.
4. Enter a password in the **Password** field.
5. Select the **End User License Agreement and Data Privacy Policy and Security Agreement** checkbox.
6. Click **Create Account**.
7. A verification email is sent to your email account. Follow the instructions in the email to activate your Instant On account.

NOTE: The email notification with the verification link might sometimes end up in the junk email folder instead of your inbox.

8. Once the above steps complete, click **Continue** on the mobile app or web application. You have now successfully registered an Instant On account.

You can use the same account credentials to sign in to the mobile app, web application, community site, or support site.

Logging in to Instant On

To log in to the Instant On application, launch the Aruba Instant On mobile app or web application.

In the Mobile app

If you are signing in for the first time, enter the registered email ID and password in the **Email** and **Password** boxes respectively, and then click **Log in**. For all future logins, the Instant On app stores the credentials and attempts to validate the same, every time the app is launched. Hence, for all future logins, the Instant On mobile app or web application displays the home page directly.

In the Web Application

1. Open a browser.
2. Type **https://portal.arubainstanton.com** in the address bar and press the **Enter** key.
3. If you are signing in for the first time, enter the registered email ID and password in the **Email** and **Password** boxes respectively, and then click **Log in**. For all future logins, the credentials are saved based on the web browser settings.

NOTE: The home page is displayed based on the number of sites associated with your account. For multiple sites associated with your account, you have the option to choose a site from the list before you are taken to the respective home page.

Follow the onscreen instructions to complete the access point setup, if the Instant On mobile app or web interface is launched for the first time.

Resetting Your Account Password

To reset your Instant On login password, follow these steps:

1. Click **Forgot your password?** on the login screen.
2. Enter the email address associated with your Aruba Instant On account in the space provided.
3. Click **Reset password**. The instructions to create a new password will be sent to your email address.

4. Open the link provided in the email. The change password page is displayed.
5. To change the password of your Instant On account, confirm your email address and enter a new password.
6. Click **Change Password**. An acknowledgment message that your password has been changed successfully is displayed on the screen.

NOTE: The email notification with the Reset password link may sometimes end up in the junk email folder instead of your inbox.

Managing Sites Remotely

Remote access allows you to configure, monitor, and troubleshoot Aruba Instant On deployments in remote sites.

- When an Instant On site is deployed and configured, it establishes a connection to the Instant On cloud, which allows you to access and manage sites remotely. The site information and account credentials associated with the site are registered and stored in the cloud. After the Instant On site is registered, it can be accessed and managed remotely through the Instant On application.

NOTE: The remote site must have access to the Internet in order to connect to the Instant On cloud. If the site loses Internet connectivity and fails to establish a connection to the cloud, you will not be able to access the site remotely.

- When you log in to the Instant On application, the entire list of sites associated with your account is displayed. Select a site from the list for which you want to initiate a remote access session. When the remote access session is established, you can begin managing the site remotely.

NOTE: The list of sites is only displayed if your account is associated with multiple sites. If your account is only associated with one site, the Instant On application connects directly to that site.

Username and Password Management

You can change your account username or password at any point in time remotely. The Instant On application automatically communicates with the Instant On cloud to update the credentials for all sites associated with the account.

Aruba Instant On User Interface

The Aruba Instant On user interface allows you to create, modify, and monitor network components from a central location. The user interface is designed to offer ease-of-use through an intuitive layout and simple navigation model.

The Instant On user interface comprises of a header, and the Instant On modules.

Figure 1 Web Application User Interface Overview

Figure 2 Mobile App User Interface Overview

Configuring Menu Items in the Header

The header includes the following menu items:

Table 5: Menu Items in the Header

Header Content	Description	Mobile App	Web Application
Alert Notification (🔔)	Displays the alerts that are triggered by the system when an unusual activity is observed on the network. See Alerts for more information.	Yes	Yes

Configuring Settings in the Modules

Modules allow you to configure and monitor network components such as application usage and system alerts.

The Instant On user interface consists of the following modules:

- **Site Health:** Provides the health status of devices connected to the network. See [Monitoring Site Health](#) for more information on the **Site Health** module.
- **Networks:** Provides a summary of the networks that are available for primary and guest users. See [Configuring Networks](#) for more information on the **Networks** module.
- **Clients:** Provides connection information for the clients in your network. See [Managing Clients](#) for more information on the **Clients** module.
- **Applications:** Provides daily usage data for the different types of applications and websites accessed by clients in the network. See [Analyzing Application Usage](#) for more information on the **Applications** module.
- **Inventory:** Specifies the number of devices on the site that are UP. This page also allows you to add a new device or remove an existing device. See [Viewing and Updating Inventory](#) for more information on the devices on the site.

Opening a Module

To open a module, click one of the following module tiles on the Instant On home page:

Table 6: *Module Tiles*

Module	Tile
Site Health	
Networks	
Clients	
Applications	
Inventory	

After opening a module, you can switch to another module by clicking one of the module tiles at the bottom of the page.

Closing a Module

In the Web Application—To close a module and return to the Instant On home page in the web application, do one of the following:

- Click **X** at the top-right corner of the module.
- Click the Aruba Instant On logo at the top-left corner of the page.

In the Mobile App—Click the back arrow (←) on the title bar of the mobile app to exit the module.

Site management

The **Site Management** page displays the following user settings that can be modified in the Aruba Instant On application:

- Administration
- Time zone
- Guest portal (for web application only)
- Software update

Viewing Site Management Settings

To view the **Site Management** page, follow these steps:

- In the web application—Click the settings menu () icon on the Aruba Instant On header and select **Site management** from the drop-down menu. The **Site Management** page is displayed.
- In the mobile app—Tap the advanced menu () icon on the Aruba Instant On home screen. Select **Site management** from the menu.

Administration

The **Administration** page allows you to modify administrator information, including your Aruba Instant On site name and account credentials. You can also add a secondary administrator account to manage the site. See [Administration Settings](#) for more details on the **Administration** page.

Time zone

The **Time Zone** page allows you to set the local time zone, date, and time for your Aruba Instant On site. See [Time Zone Settings](#) for more details on the **Time Zone** page.

Guest portal (for web application only)

The Captive Portal page on the Instant On web application provides you with a Captive Portal Editor to design and customize a welcome page as you see fit. This is used in Guest networks without the need for a secured password for authentication. See [Enabling Guest Portal](#), for more information.

Software update

You can now manage your software updates by creating schedules using the Instant On mobile app and web application. For more information, see [Updating the Software Image on an Instant On Site](#).

Administration Settings

The **Administration** page allows you to modify administrator information, including your Aruba Instant On site name and account credentials. You can also add a secondary administrator account to manage the site. Both accounts will have full privileges to the Instant On site configuration and status.

Modifying the Aruba Instant On Site Name

To modify the Aruba Instant On site name, follow these steps:

1. Go to the **Administration** page in the Aruba Instant On application.
 - In the web application—Click the settings menu () icon on the Aruba Instant On header and select **Site management** from the drop-down menu. The **Administration** page is displayed by default.
 - In the mobile app—Tap the advanced menu () icon, and then select **Site management**. The **Site Management** screen displays the account administration settings.
2. Enter a new name for the Aruba Instant On site under **Site name**.

NOTE: The site name must be between 1 and 20 alphanumeric characters in length.

Adding a Secondary Account

Each Aruba Instant On site can be managed by two different administrator accounts. To add a secondary administrator account to your site, follow these steps:

1. Go to the **Administration** page in the Aruba Instant On application.
 - In the web application—Click the settings menu (

 icon on the Aruba Instant On header and select **Site management** from the drop-down menu.

The **Administration** page is displayed by default.

- In the mobile app—Tap the advanced menu () icon, and then select **Site management**. The **Site management** screen displays the account administration settings.
- 2. To add a secondary administrator account.
- In the mobile app—Click () next to **Assign another account**, to add a secondary account.
- In the web application—Click () next to **Account managing this site**, to add a secondary account.
- 3. Enter a valid email ID in the **Email** field and click **Assign account** to save the changes.

Transferring Account Ownership

Aruba Instant On allows you to transfer ownership from one administrator account to another. To transfer ownership of an Aruba Instant On site to another administrator account, follow these steps:

In the Web Application

1. Click the settings menu () icon on the Aruba Instant On header and select **Site management** from the drop-down menu. The **Administration** page is displayed by default.
2. Under **Account(s) managing this site**, click **Transfer ownership**. The **Transfer Ownership** page opens.
3. Enter the new email ID under **Email**.
4. Click **Transfer ownership** to transfer ownership of the site to the new administrator account.

After your account is removed, you are logged out of the site. A confirmation message is displayed, stating that ownership has been transferred successfully.

In the Mobile App

1. Tap the advanced menu () icon on the Aruba Instant On home screen.
2. Select **Site management** to view the administrator account settings.
3. Under **Account(s) managing this site**, tap the settings () icon and select **Transfer ownership**.
4. Enter the new email ID under **Email**.
5. Click **Transfer ownership** to transfer ownership of the site to the new administrator account.

After your account is removed, you are logged out of the site. A confirmation message is displayed, stating that ownership has been transferred successfully.

Time Zone Settings

The time zone is set automatically when the device is configured for the first time. However, if you wish to change the time zone settings, the **Time Zone** page allows you to set the local time zone, date, and time for your Aruba Instant On site. This information is used for the following Aruba Instant On features:

- Displaying daily statistics for your network.
- Enforcing network availability schedules.
- Performing daily image checks on the Aruba Instant On image server.

Setting a Local Time Zone

To set the local time zone for your Aruba Instant On site, follow these steps:

1. Go to the **Time Zone** page in the Aruba Instant On application.

- In the web application—Click the advanced settings menu (⚙️) icon on the Aruba Instant On header and select **Site management** from the drop-down menu. The **Site management** page is displayed. From the **Site Management** page, click **Time zone** to open the **Time Zone** page.
 - In the mobile app—Tap the advanced menu (☰) icon on the Aruba Instant On home screen. Select **Site management** from the menu. From the **Site Management** screen, tap **Time zone** to open the **Time Zone** screen.
2. Select a time zone from the **Site local time zone** drop-down list.

After the local time zone is set, Aruba Instant On automatically updates the local date and time under **Site local date & time**.

About

The **About** page provides information about the software currently installed on the cluster and the mobile application. This page allows you to upgrade the software when new software versions are available.

To view the information in the **About** page, follow these steps:

- In the mobile app—Tap the advanced menu icon Click the advanced menu (☰) icon from the title bar and select **About** from the drop-down menu.
- In the web application—Click the help (❓) icon from the page header and select **About** from the drop-down menu.

In the **About** page, you can view the version of the Aruba Instant On software currently running on the cluster and the mobile application.

This chapter describes the following features and tasks:

- [Monitoring Site Health](#)
- [Configuring Networks](#)
- [Analyzing Application Usage](#)
- [Managing Clients](#)

Monitoring Site Health

The **Site Health** page provides a summary of the health status of the Instant On devices connected to the network. It shows a consolidated list of alerts that are triggered from the devices provisioned at the site.

It also displays the inventory details of the connected devices and real-time data of active client connections on an hourly basis with the cumulative transfer speed of all the devices.

Viewing and Updating Inventory

The Inventory displays a list of devices in the network along with the devices' current operational status.

To view the **Inventory** page, follow these steps:

1. Click the **Inventory** () tile on the Instant On mobile app or web application home page or click the **Site Health** banner and then click on **Show inventory**.
2. The **Inventory** page lists the APs added in the network and their operational status. Click an AP to view the details of the device.

The following table lists icons and their corresponding status:

Table 7: *Device Status*

Status	Icon	Condition
Up		Device is reachable.
Down		Device is not reachable.
Warning		Reachable device with a major alert reported by the device.
Minor warning		Reachable device with a minor alert reported by the device.

Adding a Device

To add a device to the inventory list, follow these steps:

1. Click the **Inventory**  tile on the Instant On mobile app or web application home page or click the **Site Health** banner and then click on **Show inventory**. The **Inventory** page is displayed.
2. Navigate to the **Add a new device** page.
 - In the mobile app—Click add () at the bottom right corner of the page.
 - In the web application—Click **Add devices**.
3. Place your Instant On device in its destination area and make sure it is powered on. Now select **Search for my device**. It usually takes around 4-5 minutes for the Instant On devices to be detected. Alternatively, you can choose to extend your network by clicking on **How to extend my network**. For more information, see [Extending your Network](#).
4. Review the device(s) discovered and add them to your site.
5. If you still cannot find your device, tap the **I don't see my device** button to view the troubleshooting options.

Extending your Network

The **How to Extend your Network** page provides instructions on two different ways by which you can add more devices to your network.

- Extend using a cable
- Extend over-the-air (Mesh)

Extend using a cable

This option is available to you on the UI only if you have chosen to configure the Instant On devices in private network mode. To extend your network using a cable, follow these steps in the mobile app or web application:

Table 8: Steps to Extend Your Network Using a Cable

Step No	Steps	Mobile App	Web Application
1.	In the How to Extend your Network page, choose Extend using a cable .	Yes	Yes
2.	To ensure optimal performance, connect your additional Instant On APs to the same switch as the first AP, using network cables. Power on the AP using Power over Ethernet (PoE) or DC power adapter (if you have ordered for it with the installation kit).	Yes	Yes
3.	Wait for the LED lights on the additional Instant On AP(s) to blink alternatively between green and amber.	Yes	Yes
4.	Select Search for my device to make the Aruba Instant On scan for both wired and wireless devices. The AP should show up in the list of devices detected in the network.	Yes	Yes
5.	Review the device(s) discovered and add them to your site.	Yes	Yes
6.	If you still cannot find your device, click I don't see my device to view the troubleshooting options.	Yes	Yes

Extend over the air

To extend your network over the air, follow these steps in the mobile app or web application:

Table 9: Steps to Extend Your Network Over-the-Air

Step No	Steps	Mobile App	Web Application
1.	In the How to Extend your Network page, choose Extend over-the-air .	Yes	Yes
2.	Connect at least one Instant On AP to a local wired switch or a router and ensure that the initial setup is complete.	Yes	Yes
3.	Place a wireless Instant On AP in a location within the Wi-Fi range and power it on. For more information, see Instant On AP Wireless Access Point Placement Guidelines . NOTE: Ensure the wireless AP is in its factory default state and is not connected to a network using an Ethernet cable.	Yes	Yes
4.	Wait for the LED lights on the wireless Instant On AP(s) to blink alternatively between green and amber.	Yes	Yes
5.	Select Search for my device to make the Aruba Instant On scan for both wired and wireless devices. The AP should show up in the list of devices detected in the network.	Yes	Yes
6.	Review the device(s) discovered and add them to your site.	Yes	Yes
7.	If you still cannot find your device, click I don't see my device to view the troubleshooting options.	Yes	Yes

Instant On AP Wireless Access Point Placement Guidelines

Consider the following guidelines when installing additional APs in the wireless network:

- **Interfering sources or obstacles**—Check for interfering sources or obstacles and install the APs on a ceiling or a wall.
- **Line of sight**—If you can clearly see the wired AP from where you stand, it is likely that the AP will offer a strong signal and good coverage.
- **No line of sight**—When line of sight is not possible, the APs should be placed in a close range to each other. The number of obstacles and type of materials heavily influence and attenuate the RF signal. In this scenario, a minimum distance of 16 feet (5 meters) and a maximum distance of 60 feet (18.25 meters) is recommended between the APs.
- **Wireless APs are placed on different floors**—If you place the APs on different floors, try to align them along a vertical line.

NOTE: These are general guidelines and you may need to experiment with the placement of your Instant On APs before settling down on a permanent location.

Access Point Details

The **Access Point Details** page provides details of the selected AP, which includes the AP name, IP address, MAC address, serial number, radio, ports, and model type of the AP. This page also provides a summary of the wireless radios including the number of clients that are currently connected. This page is displayed as **Router Details** in the mobile app, if your device is configured as a router.

Viewing AP/Router Details

To view the **Access Point Details / Router Details** page, follow these steps:

1. Click the **Inventory** () tile on the Aruba Instant On home page or click the **Site Health** () banner and then click on **Show inventory**.
2. View the AP/Router details such as the AP name, IP address of the AP, MAC address, Serial number, AP type, radio, and the number of the clients connected on each radio channel.
 - In the mobile app—Tap any of the APs listed in the **Inventory** list. The **Access Point Details** page is displayed with details. The **Router Details** page is displayed if the device you selected is configured as a router.
 - In the web application—Click the (>) arrow next to an AP in the **Inventory** list. The AP details is listed under the **Properties** tab.

Viewing Details of Ports

Every network requires the E0/PT or ENET port of the AP or Router to be connected to the gateway or switch using an Ethernet cable. Each Instant On AP has a single port, except for the AP11D devices which have an additional 3 LAN ports—E1, E2, and E3 respectively. These ports can be used to connect additional APs in the network. To view the details of the ports and the uplink status, follow these steps:

1. Navigate to the device details page.
 - In the mobile app—Tap any of the APs listed in the **Inventory** list. The **Access Point Details** page is displayed with details. The **Router Details** page is displayed if the device you selected is configured as a router.
 - In the web application—Click the (>) arrow next to an AP in the **Inventory** list. The AP details is listed under the **Properties** tab.
2. Under the **Ports** section of the **Access Points Details / Router Details** page, view the details of the ports that are connected, the uplink status, and the upload and download throughput rates.

NOTE: The port details will not be displayed if the AP is connected as a mesh point in the network.

Restarting Your Device

To restart the device, follow these steps:

- In the mobile app—Click the advanced menu () icon in the title bar of the **Access Points Details / Router Details** page and select **More actions** from the drop-down menu. The appropriate assistant page is displayed. Click **Restart Device**.
- In the web application—Click the troubleshooting () icon, and click **Restart**.

Removing an AP from the Inventory

Follow these steps to remove an AP which is still online:

- In the mobile app—Click the advanced menu () icon in the title bar of the **Access Points Details / Router details** page and select **More actions** from the drop-down menu. The appropriate assistant page is displayed. Click **Remove from inventory**.
- In the web application—Navigate to **Inventory**. Select the AP you want to remove from the inventory by clicking the (>) arrow next to the AP name. In the **Properties** screen, click the troubleshooting () icon, and click **Remove from inventory**.

Follow these steps to remove an AP which is offline:

On the **Access Point Details / Router Details** page, a rectangular bar appears below the device name when an alert is triggered. The color of the rectangular alert bar will appear according to the alert type.

1. Click **Show details**. You will be directed to the **Alert Details** page which provides more information about the unusual activity.

NOTE: The **Advanced** menu does not appear on the title bar when the status is down.

2. To remove the access point from the inventory, follow these steps:
 - a. If the Instant On device is removed from the network, you can choose to remove the device from the inventory by clicking **Remove from inventory** in the **Access Point Details / Router Details** page. A pop-up box appears on the screen requesting your confirmation.
 - b. Click **Remove** to delete the device from the inventory.

Configuring LAN Settings on an Instant On Device

You can either configure Instant On devices to automatically receive an IP address from an external DHCP server running on the LAN or manually configure a Static IP address.

1. Navigate to the **LAN Parameters** configuration page:
 - In the mobile app—Under the **Connectivity** section of the **Access Point Details / Router Details** page, tap **Advanced LAN parameters**.
 - In the web application—Click the (>) arrow next to an AP or router in the **Inventory** list and then click **Advanced**.
2. Choose one of the following:
 - **Automatic (default):** This is the default setting for all APs. The Instant On device will request an IP address from a DHCP service running on the LAN. This option is visible only in the mobile app.
 - **Static:** To specify a fixed IP address on the LAN for your Instant On device, select the **Static** radio button in the mobile app or slide the toggle switch () beside **Static IP address** in the Advanced tab of the web application and configure the following parameters:
 - **LAN IP**—Enter a Static IP address.
 - **Subnet mask**—Enter the subnet mask.
 - **Default gateway**—Enter the IP address of the Default Gateway.
 - **DNS server**—Enter the IP address of the DNS server.
3. Save the settings.
 - In the mobile app—Tap **DONE**.
 - In the web application—Click **Save**.

Alerts

Alerts are triggered by the system when an unusual activity is observed with the network devices on the site.

To view the **Alerts** page, click the **Site Health** banner () and tap **Show alert history**.

Types of alerts

The alerts are classified based on the severity. The [Alerts](#) page in the Instant On mobile app and web application prioritizes the alert that requires immediate attention by placing it at the top of the list. The alerts are classified as follows:

- Major active alert () — The alerts classified as major are considered as the most severe by the system and prompt the user to take an immediate action. These alerts are triggered when there is a definite downtime of a device, synchronization failure, or when the Internet connectivity is down.
- Minor active alert () — The alerts are classified as minor when a degradation in performance is observed, but without any downtime. These alerts are triggered when a system or device is overloaded, or a device MAC address is unauthorized.

Viewing Pending Alerts

The **Alert** () icon appears on the title bar of the mobile app or web application when there is a pending alert. The number of alerts in the system is displayed as a colored badge on top of the **Alert** () icon. The color of the badge determines the severity of the alert present in the system. When there are no alerts present in the system or all the alerts have been acknowledged, the **Alert** () icon will not appear in any of the title bars on the app or the application.

To view the Alert history, follow these steps:

1. Click the **Site Health** banner () on the Instant On home page.
2. On the Site Health main page, you will see the details of the latest alert. Click **Show alert history**. The **Alerts** page displays a list of all the alerts received by the app, including the active alerts and the ones that have been cleared.
3. Choose the alert you want to acknowledge and view the **Probable causes** and **Recommended actions** you can take to clear the alert.
 - In the mobile app—Tap the alert you want to acknowledge. The **Alert Details** page is displayed with the details.
 - In the web application—Click the arrow () next to the alert. The details of the alert is displayed.

NOTE: When there are multiple active alerts received by the application, the summary box in the **Site Health** page displays the active alerts with the highest severity in the system along with their color codes. For example: Major active alert takes the highest priority and is displayed in a red summary box. The **Alerts** page displays the list of active alerts in descending order of their severity and the order by which they should be acknowledged.

Configuring Networks

The Aruba Instant On mobile app or web application provides a summary of the networks that are available for employee and guest users.

Viewing the Network Summary

To view the **Networks** page, click **Networks** on the Aruba Instant On home page :

Table 10: Network Information

Parameter	Description	Mobile App	Web Application
Network Name	Identifies the Instant On network used to connect computers, tablets, or phones together. The network name is also used as the Wi-Fi identifier.	Yes	Yes
Network type	Indicates if the network is a employee or guest network.	Yes	Yes
Status	Shows the status of the network. Guest networks can be set to Active () or Inactive () by changing the status manually or by creating a network schedule to change the status at a specific day and time. See Guest Network for more details on setting network schedules.	Yes	Yes
Security	Shows the security option set for the network: Network password (PSK) —Secured using a shared password (PSK). Provides the following security options. <ul style="list-style-type: none"> ■ WPA2 Personal—This is the default setting. ■ WPA2+WPA3 Personal NOTE: The Authentication server (RADIUS) option is displayed only when you click on Use authentication server (RADIUS) instead?. Authentication server (RADIUS) —You must have a RADIUS server available to use this option. Secured using a higher encryption RADIUS authentication server. This option is available only for Employee networks. The following options are available. <ul style="list-style-type: none"> ■ WPA2 Enterprise—This is the default setting. ■ WPA2+WPA3 Enterprise ■ Welcome page—No security. Any user can connect to this network without entering a username or password. This option is available only for guest networks. This network requires Captive Portal to be configured. 	Yes	Yes
Clients	Shows the number of clients currently connected to the network. Click the number listed under Clients to view the details of the client selected. See Managing Clients for more information about the Clients page.	Yes	Yes
Transferred	Shows the volume of data, in bytes, transferred in the network throughout the day.	Yes	Yes

Viewing Network Configuration Details

For more details about a specific network, select a network from the **Networks** page. The **Employee Network Details** or **Guest Network Details** page opens. See [Employee Network](#) for more information about the **Employee Network Details** page, or [Guest Network](#) for more information about the **Guest**

Network Details page.

Employee Network

An Employee network is a classic Wi-Fi network. This network type is used by the employees in an organization and it supports passphrase-based (PSK) or 802.1X-based authentication methods. Employees may access the protected data of an enterprise through the employee network after successful authentication. The employee network is selected by default during a network profile configuration.

NOTE: The very first employee network you create for the site cannot be deleted unless you choose to delete the site entirely from your account.

Configuring an Employee Network

To configure an employee network:

1. Select **Employee** as the Network Type.
2. Enter a **Network name** for the employee network. This will also be broadcast as the SSID for the WLAN network.
3. Choose a **Security** level for the network and update the required fields.
 - **Network password (PSK)**—Secures the network using a shared password (PSK). Create a password of your choosing in the **Network password** field. The following options can be configured.
 - **WPA2 Personal**
 - **WPA2+WPA3 Personal**

If you want to use a RADIUS authentication server, click **Use authentication server (RADIUS) instead?**.

NOTE: You must configure the RADIUS server to allow APs individually or set a rule to allow the entire subnet.

- **Authentication server (RADIUS)**—A RADIUS server must be available to use this option. Secures the network using a higher encryption RADIUS authentication server. Update the following fields:
 - **WPA2 Enterprise**
 - **WPA2 + WPA3 Enterprise**

Primary RADIUS Server—Configure the following parameters for the **Primary RADIUS Server**.

- **Server IP address**—Enter the IP address of the RADIUS server.
- **Shared secret**—Enter a shared key for communicating with the external RADIUS server.
- **Server timeout**—Specify a timeout value in seconds. The value determines the timeout for a RADIUS request. The Instant On AP attempts to send the request several times (as configured in the **Retry count**) before the user gets disconnected. For example, if the Timeout is 5 seconds, Retry counter is 3, user is disconnected after 20 seconds. The default value is 5 seconds.
- **Retry count**—Specify a number between 1 and 5. Retry count indicates the maximum number of authentication requests that are sent to the server group, and the default value is 3 requests.
- **Authentication port**—Enter the authentication port number of the external RADIUS server within the range of 1–65535. The default port number is 1812.
- **NAS IP address**—Enter an arbitrary IP address to be used as RADIUS attribute 4, NAS IP Address, without changing source IP Address in the IP header of the RADIUS packet.
- **NAS identifier**—Enter a string value for RADIUS attribute 32, NAS Identifier, to be sent with RADIUS requests to the RADIUS server.

4. To configure a **Secondary RADIUS Server**, slide the toggle switch to the right () and update the required fields.
5. To **Send RADIUS Accounting** requests, slide the toggle switch to the right ().
6. Click **Save**.

NOTE: After you configure an Employee network and save its settings for the first time, a toggle switch appears in the Employee Details page indicating the network is currently **Active** (). Use this switch to enable or disable the employee network.

Modifying Employee Network Details

In the Instant On mobile app or web application, the **Employee Details** page includes the following tabs to provide additional information about the network:

- **Identification:** Provides general identification and login information for the network. For more information, see [Modifying the Employee Network Name and Password](#).
- **Options:** Allows you configure a bandwidth limit on the internet usage and IP and VLAN assignment for clients on employee networks, For more information, see [Options](#).
- **Statistics:** Provides client and application usage statistics for the network. For more information, see [Statistics](#)
- **Schedule:** Allows you to create a schedule during which the network is to be made available to users. For more information, see [Schedule](#)

Modifying the Employee Network Name and Password

To modify the network name or password of the employee network in the Aruba Instant On mobile app or web application, follow these steps:

Table 11: *Steps to Modify the Employee Network Name and Password*

No of Steps	Steps	Mobile app	Web application
Step 1	Click Networks on the Instant On home screen. The Networks screen is displayed.	Yes	Yes
Step 2	Select the employee network from the Networks list to view the Employee Network Details screen.	Yes	Yes
Step 3	Click Identification tab.	No	Yes
Step 4	Enter a new name under Network name to change the main network name or a new password under Network password to change the main network password. A warning message appears, indicating that changes to the network settings will disconnect all clients currently accessing the network.	Yes	Yes
Step 5	Click Save .	Yes	Yes

Statistics

The **Statistics** tab in the Aruba Instant On mobile app or web application provides an overview of the client and application usage statistics for the employee network. To view the statistics displaying the application usage data for the last 24 hours:

- In the mobile app—Under the employee network, tap the pie chart displaying the data transferred (in MB).
- In the web application—Select the employee network and then click on the **Statistics** tab.

Viewing Client Count

The **Statistics** page in the Aruba Instant On mobile app or web application displays the client count, which is the total number of clients currently connected to the network. Click on the number listed under **Clients** to view the total number of clients connected to the network. The **Connected Clients** page provides connection information for clients in the network. See [Viewing Details of Active Clients](#) for more information about the **Clients** page.

Viewing Applications Chart Data

The **Applications** chart in Aruba Instant On mobile app or web application provides data for the top five application categories, based on usage. Data is presented in both bytes and percentage.

Figure 3 Applications Chart

Viewing Total Data Transferred

The **Statistics** page in the Aruba Instant On mobile app or web application displays the total amount of data (in MB), transferred in the network throughout the day.

Schedule

Aruba Instant On allows you to enable or disable a network for users at a particular time of the day. You can now create a time range schedule specific to the employee network, during which access to the Internet or network is restricted. This feature is particularly useful if you want the Wi-Fi network to be available to users only during a specific time, for example, only when your business is open.

Creating an Access Schedule on an Employee Network

To create a network access schedule for an employee network, follow these steps:

Table 12: Steps to Configure an Employee Network Access Schedule

Steps	Mobile App	Web Application
1. Select an employee network from the Networks list.	Tap Networks () tile on the Instant On home page and select an employee network from the list. The Employee Details page is displayed.	Tap Networks () tile on the Instant On home page. The Networks page is displayed. Click the () arrow next to the employee network to view the configuration parameters.
2. Navigate to the Network Schedule page.	Under More options , tap Add a network access schedule . The Network Schedule page is displayed.	Click the Schedule tab.
3. Enable the Schedule .	Slide the toggle switch beside No schedule () to the right to enable the network schedule. The Ruled by a schedule setting is set to enabled ()	Slide the toggle switch beside No schedule () to the right to enable the network schedule. The Ruled by a schedule setting is set to enabled ()
4. Configure a network schedule for the employee network.	Under Days of the week , select the day(s) during which the network will be active.	Under Days of the week , select the day(s) during which the network will be active.
5. Select the time period during which the network should stay active.	Select one of the following options under Active hours during the day : <ul style="list-style-type: none"> ■ All day: The network is active throughout the day. ■ Active between: The network is only active between the designated Start Time and End Time. 	Select one of the following options under Active hours during the day : <ul style="list-style-type: none"> ■ All day: The network is active throughout the day. ■ Active between: The network is only active between the designated Start Time and End Time.
6. Save the configuration	Tap the back arrow () to return to the Employee Details page. Tap DONE .	The changes are auto saved.

Options

The **More options** tab in the Aruba Instant On mobile app or the **Options** tab in the web application allows you to configure the bandwidth limit on the internet usage along with IP and VLAN assignment for clients on employee or guest networks. To configure these options:

- In the mobile app—Select the employee network or guest network and tap the **More options** drop-down.
- In the web application—Select the employee network or guest network and then click the **Options** tab.

IP and VLAN Assignment

The **IP and VLAN** setting in the Aruba Instant On mobile app and web application allows you to configure internal/external DHCP and NAT for clients on employee networks or guest networks. You can configure one of the following settings on your device:

- **Same as local network (default)**—This setting is referred to as **Bridged mode**. Clients will receive an IP address provided by a DHCP service on your local network. This option is enabled by default for employee networks. To configure a VLAN on the employee network, slide the toggle switch beside **Assign a VLAN to your network** to the right () and enter a **VLAN ID**.
- **Specific to this network**—This setting is referred to as **NAT mode**. Clients will receive an IP address provided by your Instant On devices. Enter the **Base IP address** of the Instant On AP and select the client threshold from the **Subnet mask** drop-down list. This option is enabled by default for guest networks.

NOTE: The **Assign a VLAN to your network** toggle switch does not appear if the Instant On AP is configured as a Router in your network.

Restrict Network Bandwidth

The bandwidth consumption for an employee or guest network can be limited based on the client MAC address. The configured limit will be maintained even when the client roams from one AP to another within the network.

To configure a bandwidth limit, follow these steps:

Table 13: *Steps to Configure Bandwidth Usage*

Steps	Mobile App	Web Application
1. Navigate to the Options page.	Select the employee or guest network and tap the More options drop-down.	Select the employee or guest network and then click on the Options tab.

Table 13: Steps to Configure Bandwidth Usage

Steps	Mobile App	Web Application
2. Set the bandwidth usage limit.	Tap Bandwidth Usage and move the slider to set the speed limit for the employee or guest network. The limit is set to Unlimited by default. The available speed limits are: <ul style="list-style-type: none"> ■ 1 Mbps—Good for emails, VoIP, web surfing, music, and social media. ■ 5 Mbps—Good for online gaming, video conferences and streaming videos. ■ 10 Mbps—Good for HD video streaming. ■ 25 Mbps—Good for 4K video streaming. ■ Unlimited—There is no limit for internet usage per client. 	Under Bandwidth Usage move the slider to set the speed limit for the employee or guest network. The limit is set to Unlimited by default. The available speed limits are: <ul style="list-style-type: none"> ■ 1 Mbps—Good for emails, VoIP, web surfing, music, and social media. ■ 5 Mbps—Good for online gaming, video conferences and streaming videos. ■ 10 Mbps—Good for HD video streaming. ■ 25 Mbps—Good for 4K video streaming. ■ Unlimited—There is no limit for internet usage per client.
3. Save the configuration	The changes are auto saved. Tap the back arrow (←) to return to the employee/guest network details page.	Click Save .

The **Show network** toggle switch is enabled by default () to broadcast the employee network or guest in the list of available Wi-Fi networks. Slide the toggle switch to the left () if you want to disable the selected network.

Guest Network

A Guest Network is configured to provide access to non-enterprise users who require temporary access to the Internet.

Creating a Guest Network

To create a Guest Network, follow these steps:

1. Choose the **Guest** network option in the **Networks** page.
 - In the mobile app—Click add () and select the **Guest** radio button.
 - In the web application—Click **+ Add** and select the **Guest** radio button.
2. Enter a **Network name**.
3. Select one of the following security levels:
 - a. **Use a network password (PSK) instead?**—Secures the network using a shared password (PSK) by using either WPA2 Personal or WPA2 + WPA3 Personal encryption. Enter a password of your choice in the **Network password** field.

b. **Use a guest portal instead?**—If you do not wish to secure the network with a password or if you want to redirect users to your Captive Portal page before being able to access the network. This option is visible only when you click on the **Use a network password (PSK) instead?** option and vice versa. For more information, see [Enabling Guest Portal](#).

4. To configure additional settings for your guest network, see [Options](#).

Changing the Guest Network Status Manually

To set the guest network status to **Inactive**, follow these steps:

Table 14: Steps to Deactivate the Guest Network

Steps	Mobile App	Web Application
1. Navigate to the Guest Details page.	Tap Networks () tile on the Instant On home page. Tap on the guest network you want to deactivate. The Guest Details page is displayed.	Tap Networks () tile on the Instant On home page. The Networks page is displayed. Click the (>) arrow next to the guest network.
2. Deactivate the guest network.	Slide the Active toggle switch () to the left to set the network to Inactive ().	Slide the Active toggle switch () to the left to set the network to Inactive ().
3. Save the changes	Click DONE . The network is marked as Inactive , and all network settings are hidden.	Click Save . The network is marked as Inactive , and all network settings are hidden.

To set the guest network status to **Active**, follow these steps:

Table 15: Steps to Activate the Guest Network

Steps	Mobile App	Web Application
1. Navigate to the Guest Details page.	Tap Networks () tile on the Instant On home page. Tap ACTIVATE NETWORK on the guest network you want to activate. The Guest Details page is displayed.	Tap Networks () tile on the Instant On home page. The Networks page is displayed. Click the (>) arrow next to the guest network.
2. Activate the guest network.	Slide the Inactive toggle switch () to the right set the network to Active ().	Under the Identification tab, slide the Inactive toggle switch () to the right set the network to Active ().
3. Save the changes	Click DONE . The network is marked as Active , and all network settings are made visible.	Click Save . The network is marked as Active , and all network settings are made visible.

Creating an Access Schedule on a Guest Network

To create a network access schedule for a guest network, follow these steps:

Table 16: Steps to Configure a Guest Network Access Schedule

Steps	Mobile App	Web Application
1. Select a guest network from the list of Networks .	Tap Networks (📶) tile on the Instant On home page and select a guest network from the list. The Guest Details page is displayed.	Click the Networks (📶) tile on the Instant On home page. The Networks page is displayed. Click the (➤) arrow next to the guest network to view the configuration parameters.
2. Navigate to the Network Schedule page.	Under More options , tap Add a network access schedule . The Network Schedule page is displayed.	Click the Schedule tab.
3. Enable the Schedule .	Slide the toggle switch beside No schedule (🔴) to the right to enable the network schedule. The Ruled by a schedule setting is set to enabled (🟡).	Slide the toggle switch beside No schedule (🔴) to the right to enable the network schedule. The Ruled by a schedule setting is set to enabled (🟡).
4. Configure a network schedule for the guest network.	Under Days of the week , select the day(s) during which the network will be active.	Under Days of the week , select the day(s) during which the network will be active.
5. Select the time period during which the network should stay active.	Select one of the following options under Active hours during the day : <ul style="list-style-type: none"> ■ All day: The network is active throughout the day. ■ Active between: The network is only active between the designated Start Time and End Time. 	Select one of the following options under Active hours during the day : <ul style="list-style-type: none"> ■ All day: The network is active throughout the day. ■ Active between: The network is only active between the designated Start Time and End Time.
6. Save the configuration	Tap the back arrow (⬅️) to return to the guest network details page. Tap DONE .	The changes are auto saved.

Enabling Guest Portal

Guest portal can be accessed using a web browser. It is available to newly connected users in a Wi-Fi network, before they are granted broader access to network resources. Guest portals are commonly used to present a landing or login page which may require the guest to accept your terms and policies before connecting to the Internet. You can also use the Guest portal to add details about your business and advertise special deals. Aruba Instant On offers you the ability to customize Guest Portal with your business logo, pictures, legal terms and other details. To configure Guest portal service on the Aruba Instant On mobile app or web application, follow these steps:

In the Mobile App

1. Click **Networks** from the Aruba Instant On home page.
2. Select an active Guest Network connection.
3. Under **Security**, tap the **Use a guest portal instead?** link.

4. Tap the (✎) **Customize guest portal** link to modify the captive portal or splash page. The **Guest Portal** page is displayed.
5. Tap the drop-down arrow at the top-right hand corner of the screen and select either **Internal**, **External**, or **Facebook** settings.
6. Tap **Ok**.
7. Based on your selection, enter values in the required fields. For more information, see:
 - [Configuring Internal Captive Portal](#)
 - [Configuring External Captive Portal](#)
 - [Facebook Wi-Fi](#)
8. The changes are autosaved.

In the Web Application

1. Click **Networks** from the Aruba Instant On home page.
2. Select one of the active Guest Network connections.
3. Under **Security** in the **Identification** tab, click **Use a guest portal instead?** link.
4. Click the (✎) **customize guest portal** link to modify the captive portal or splash page. The Guest Portal page is displayed.
5. Select either **Internal**, **External**, or **Facebook** settings.
6. Based on your selection, enter values in the required fields. For more information, see:
 - [Configuring Internal Captive Portal](#)
 - [Configuring External Captive Portal](#)
 - [Facebook Wi-Fi](#)
7. Click **Apply changes**.

Configuring Internal Captive Portal

You can configure an internal captive portal splash page when adding or editing a guest network created for your Instant On site. Following are the internal captive portal configuration parameters:

Table 17: *Internal Captive Portal Configuration*

Parameter	Description	Mobile App	Web Application
Background	Tap the box to view the color palette and choose a color for the background of the internal captive portal page.	Yes	Yes
Welcome Message	Design the welcome message by updating the following fields: Text —Enter the text for the welcome message. Example: Welcome to Guest Network. Font size —Drag the slider to set the size of the font. Font color —Tap the box to view the color palette and choose a color for the font. Font family —Choose a font type from the drop-down list.	Yes	Yes

Table 17: *Internal Captive Portal Configuration*

Parameter	Description	Mobile App	Web Application
Logo / Image	Tap the image icon to browse and upload an image from your device.	Yes	Yes
Terms and Conditions	Design the terms and conditions section by updating the following fields: Title text —Enter the title text. Example: Please read the Terms and Conditions before using the Guest Network. Font size —Drag the slider to set the size of the font. Font color —Tap the box to view the color palette and choose a color for the font. Font family —Choose a font type from the drop-down list. Terms content —Enter or paste your terms and conditions in the text box. Agree text —Enter a comment in the text box. For example: I agree to the terms and conditions. <ul style="list-style-type: none"> ■ Font color—Tap the box to view the color palette and choose a color for the font. ■ Font family—Choose a font type from the drop-down list. 	Yes	Yes
Accept Button	Design the Accept Button by updating the following fields: Text —Enter the text for the accept button. Example: I agree to the terms and conditions. Border radius —Drag the slider to set the border radius of the accept button. Background color —Tap the box to view the color palette and choose a color for the background. Font color —Tap the box to view the color palette and choose a color for the font. Font family —Choose a font type from the drop-down list.	Yes	Yes

Configuring External Captive Portal

You can design an external captive portal splash page for your guest network and also configure RADIUS authentication and accounting parameters. Following are the external captive portal configuration parameters:

Table 18: *External Captive Portal Configuration*

Parameter	Description	Mobile App	Web Application
Server URL	Enter the URL for the external captive portal server.	Yes	Yes
Redirect URL	Specify a redirect URL if you want to redirect the users to another URL.	Yes	Yes

Table 18: *External Captive Portal Configuration*

Parameter	Description	Mobile App	Web Application
Whitelisted domains	Specify the domain names of the sites that should be automatically whitelisted for unauthenticated users and click (+).	Yes	Yes
Send RADIUS Accounting	Slide the toggle switch to enabled () to ensure the Instant On AP sends a status-server request to determine the actual state of the accounting server before marking the server as unavailable.	Yes	Yes
Primary RADIUS Server	<p>Configure a primary RADIUS server for authentication by updating the following fields:</p> <p>Server IP address—Enter the IP address of the external RADIUS server.</p> <p>Shared secret—Enter a shared key for communicating with the external RADIUS server.</p> <p>Click the More RADIUS parameters link to configure the following parameters:</p> <p>Server timeout—Specify a timeout value in seconds. The value determines the timeout for one RADIUS request. The Instant On AP retries to send the request several times (as configured in the Retry count) before the user gets disconnected.</p> <p>Retry count—Specify a number between 1 and 5. Indicates the maximum number of authentication requests that are sent to the server group, and the default value is 3 requests.</p> <p>Authentication port—Enter the authorization port number of the external RADIUS server within the range of 1–65,535. The default port number is 1812.</p> <p>Accounting port—Enter the accounting port number within the range of 1–65,535. This port is used for sending accounting records to the RADIUS server. The default port number is 1813.</p> <p>NAS IP address—Allows you to configure an arbitrary IP address to be used as RADIUS attribute 4, NAS IP Address, without changing source IP Address in the IP header of the RADIUS packet.</p> <p>NAS identifier—Allows you to configure strings for RADIUS attribute 32, NAS Identifier, to be sent with RADIUS requests to the RADIUS server.</p>	Yes	Yes
Secondary RADIUS Server	<p>To configure a Secondary RADIUS Server, slide the toggle switch to the right ().</p> <p>NOTE: The configuration parameters for the Secondary RADIUS Server and the Primary RADIUS Server are the same.</p>	Yes	Yes

Facebook Wi-Fi

Facebook Wi-Fi service is only relevant to the guest network. It offers the possibility to create a captive portal page that draws traffic to the business. The business information would appear in the person's feed when using the service and can be automatically seen by friends, thus attracting more people towards the business.

Configuring the Facebook Wi-Fi Service

To configure Facebook Wi-Fi service on the Aruba Instant On mobile app or web application, follow these steps:

In the Mobile App

1. Click **Networks** from the Aruba Instant On home page.
2. Select an active Guest Network connection.
3. Under **Security Level**, tap the **Use a guest portal instead?** link.
4. Click the (✎) **Customize guest portal** link. The **Guest Portal** page is displayed.
5. Tap the drop-down arrow at the right hand corner of the screen and select **Facebook** from the menu.
6. Tap the (✎) **configure Facebook Wi-Fi** link. You will be redirected to the Facebook page of the business.
7. Log in using your Facebook account and access the internet.

In the Web Application

1. Click **Networks** from the Aruba Instant On home page.
2. Select one of the active Guest Network connections.
3. Under the **Identification** page, click the **Use a guest portal instead?** link.
4. Click the (✎) **Customize guest portal** link. The **Guest Portal** page is displayed.
5. Select **Facebook** from the drop-down list.
6. Click **Apply changes**.
7. Click the (✎) **Configure Facebook Wi-Fi** You will be redirected to the Facebook page of the business.
8. Log in using your Facebook account and access the internet.

NOTE: The Facebook Wi-Fi setting will appear on the screen only when the **No Security** option is selected.

Statistics

The **Statistics** tab in the Aruba Instant On provides an overview of the client and application usage statistics for the employee network. To view the statistics displaying the application usage data for the last 24 hours:

- In the mobile app—Under the guest network, tap the pie chart displaying the data transferred (in MB).
- In the web application—Select the guest network and then click on the **Statistics** tab.

Viewing Client Count

The **Statistics** page in the Aruba Instant On displays the client count, which is the total number of clients currently connected to the network. Click the client number under the **Clients** icon to open the **Clients** page. The **Clients** page provides connection information for clients in the network. See [Viewing Details of Active Clients](#) for more information about the **Clients** page.

Viewing Applications Chart Data

The **Applications** chart in the Aruba Instant On provides data for the top five application categories, by usage. Data is presented in both bytes and percentage.

Figure 4 Applications Chart

The above data is also categorized as a list. For more information, see [Applications List](#).

Viewing Total Data Transferred

The **Statistics** page in the Aruba Instant On displays the total volume of data, in bytes, transferred in the network throughout the day.

Analyzing Application Usage

Aruba Instant On provides daily usage data for the different types of applications and websites accessed by clients in the network.

Viewing Application Information

The **Applications** page provides the following information about types of applications accessed by clients in your network:

Table 19: Application Information

Parameter	Description	Mobile App	Web Application
Name	Shows the name of the application category. See Analyzing Application Usage for the complete list of application categories.	Yes	Yes
Total Usage	Shows the total usage for a given application category, in bytes.	Yes	Yes
Total Usage %	Shows the total usage for a given application category, in percentage (%).	Yes	Yes

Filtering Application Information in the Web Application

To filter the information that is displayed on the **Applications** page of the Instant On web application, follow these steps:

1. Click **Applications** on the Instant On home page. The **Applications** page opens.
2. Click the tool (⌵) button at the top-right corner of the **Applications** list to open the parameter drop-down list.
3. Select the parameters that you want to display or hide from the **Applications** page.
 - Parameters with an orange check mark are displayed on the **Applications** page.
 - Parameters without an orange check mark are not displayed on the **Applications** page.

Analyzing Application Usage Data by Category

After you have filtered out the **Total Usage** data based on different application categories, you can view the data usage on each employee or guest network at the site.

To view the application data based on its category, follow these steps:

- In the mobile app—Tap the Applications (📱) tile on the Instant On home page. The **Total Usage** data is displayed in the **Applications** page. Tap on any of the web categories to view the usage data.
- In the web application—Click the Applications (📱) tile on the Instant On home page. The **Applications** page displays the web categories and their **Total Usage** data on the network. Click the (>) arrow beside the **Name** of any of the web categories to view the usage data.

The following data is displayed for each category:

- **Websites and applications most visited**—Displays the data for the top five application categories (by usage).
- **Activity for the last 24 hours**—Displays the data for the last 24 hours on the Instant On network.
 - **Network**—Displays the list of employee and guest networks active for the last 24 hours.
 - **Type**—Denotes if the network is an employee or a guest network
 - **Legend**—Includes the color codes to different each network. The color codes in the legend are used to display the donut chart.
 - **Allow use**—Allows you to block the traffic from the selected application category.
 - **Data Transferred**—Denotes the data transferred on the network specific to the selected web category, during the last 24 hours.

Sorting Application Information in the Web Application

Application data can be sorted in the Instant On web application to help you locate the information you need efficiently. For example, application data can be sorted in alphabetical order based on the application category name. Click one of the parameters at the top of the **Applications** list to sort the information based on your needs.

Applications Chart

Data for the top five application categories (by usage) is displayed in a donut chart. If more than five application categories have been accessed throughout the day, the fifth section of the **Applications** chart is represented as **Other**. Any applications that do not fall under the top four application categories are grouped into **Other**.

Applications List

Data for every application category is displayed in a list, which is organized in descending order by usage.

Table 20: *Application Categories and their Webroot Classification*

Application Category	Icon	Instant On Classification
<p>Productivity—Sites and tools that help you stay productive and take control of your tasks like enterprise applications, antivirus, project management tools, collaborative software, reference and research, search engine, translation and web conferencing software.</p>		<ul style="list-style-type: none"> ■ Application Software
<p>Utilities—Sites about tools and services that ease internet usage and navigation, such as search engines, cloud storage, and file transfer.</p>		<ul style="list-style-type: none"> ■ Computer and Internet Security ■ Computer and Internet Information ■ Translation ■ Reference and Research ■ Personal Storage ■ Search Engines ■ Pay-to-Surf ■ Internet Portals ■ Internet Communications ■ Web-based email ■ Shareware and Freeware ■ Dynamically Generated Content ■ Training and Tools ■ Web Hosting
<p>Lifestyle—Sites that cover beauty and fashion trends, dining, entertainment and arts, maps and navigation, religion, society and travel.</p>		<ul style="list-style-type: none"> ■ Entertainment ■ Leisure ■ Travel ■ Location ■ Fashion
<p>Web—Sites and tools containing computer and internet information and security, internet software, proxies and tunnels, routing protocols, web advertisements, etc.</p>		<ul style="list-style-type: none"> ■ Website Content ■ Internet Software ■ Online Advertisement
<p>Streaming—Sites usually based on heavy video streaming or intensive network usage where a high throughput is needed, such as video, music, or movie streaming.</p>		<ul style="list-style-type: none"> ■ Streaming Media ■ Web Advertisements ■ Content Delivery Networks ■ Image and Video Search
<p>Instant Messaging & Email—Websites and applications where users can send and receive messages and emails.</p>		<ul style="list-style-type: none"> ■ Email ■ Short Message Service ■ Messenger
<p>Business & Economy—Sites about finance and economy news and information and professional services useful in a working environment, such as financial services and transactions, real estate, legal, stock market, stock advice and tools, etc.</p>		<ul style="list-style-type: none"> ■ Financial Services ■ Business and Economy ■ Job Search ■ Philosophy and Political Advocacy ■ Educational Institutions ■ Health and Medicine ■ Legal ■ Real Estate

Application Category	Icon	Instant On Classification
<p>News & Media—Sites containing local and world news, breaking news, online newspapers, crowdsourced news, general information, and weather.</p>		<ul style="list-style-type: none"> ■ World News ■ Weather Report ■ Online News
<p>Unknown—Do not consider these web categories. These include websites that cannot be grouped under any of the categories described in this list</p>		<ul style="list-style-type: none"> ■ Dead Sites ■ Parked Domains <p>NOTE: The data in these categories is negligible, they will be ignored in the data transferred calculation and nothing will be displayed about them in Aruba Instant On.</p>
<p>Social Network—Social applications include websites for social networking and media.</p>		<ul style="list-style-type: none"> ■ Social Networking ■ Dating ■ Personal sites and Blogs ■ News and Media
<p>Adult Content—Adult content applications include websites with graphic adult content or illegal subjects.</p>		<ul style="list-style-type: none"> ■ Abused Drugs ■ Marijuana ■ Adult and Pornography ■ Nudity ■ Violence ■ Abortion ■ Hate and Racism ■ Gross ■ Illegal
<p>Education—Sites about education information like schools, college, universities, and online training tools like Linda.com, LinkedIn learning, etc.</p>		<ul style="list-style-type: none"> ■ University ■ Education ■ Schools ■ Colleges ■ Online Learning
<p>Explicit Content—Restricted content applications include websites with sensitive information or graphic content.</p>		<ul style="list-style-type: none"> ■ Cult and Occult ■ Sex Education ■ Gambling ■ Weapons ■ Swimsuits & Intimate Apparel ■ Alcohol and Tobacco ■ Cheating ■ Questionable
<p>Gaming—Sites containing information about gaming, mostly referred as video games. Video games that are played partially or exclusively through the internet.</p>		<ul style="list-style-type: none"> ■ Online Gaming
<p>Government & Politics—Military and government applications include websites on military and government information and services.</p>		<ul style="list-style-type: none"> ■ Military ■ Government

Application Category	Icon	Instant On Classification
Kids and Family —Sites aimed for kids and families with learning, educational and interactive content.		<ul style="list-style-type: none"> ■ Educations ■ Kids ■ Learning
Malicious & Risk —High security risk applications include websites that contain known malicious Internet tools that can harm devices and damage the internal network.		<ul style="list-style-type: none"> ■ Hacking ■ Keyloggers and Monitoring ■ Malware Sites ■ Phishing and Other Frauds ■ Proxy Avoidance and Anonymizers ■ Spyware and Adware ■ Bot Nets ■ Spam URLs
Shopping —Shopping applications include websites for online shopping.		<ul style="list-style-type: none"> ■ Auctions ■ Shopping
Sports & Recreation —Recreational applications include websites on personal activities and interests.		<ul style="list-style-type: none"> ■ Travel ■ Home and Garden ■ Entertainment and Arts ■ Local Information ■ Hunting and Fishing ■ Society ■ Sports ■ Music ■ Fashion and Beauty ■ Recreation and Hobbies ■ Motor Vehicles ■ Kids ■ Online Greeting cards ■ Religion

Viewing and Blocking Application Access

The **Applications** page in the mobile app and web application provides a brief description of the various application categories and allows you to restrict or grant access to those applications on your employee or guest network. This page also provides details of the total data usage (in bytes), total usage percentage, and the networks for which the application category is blocked.

Viewing Applications

To view the **Applications Details** for a specific application category, follow these steps:

1. Click **Applications** on the Aruba Instant On home page. The **Applications** page opens.
2. Select an application category from the Applications list to view the details of the application.

Blocking Application Access

The Aruba Instant On mobile app and web application allows you to set restrictions to access certain applications on basis of their category:

Blocking Application Access Per-Category

1. Tap **Applications** on the Instant On home screen. The various application categories are displayed.
2. Select an application category from the **Applications** list. The selected application category opens.
3. Enable restrictions for the selected networks:

- a. In the mobile app—Under **Allow network access to this category**, slide the toggle switch(es) against each employee or guest network to enable restrictions for the selected network(s) ().
- b. In the web application—Under **Activity for the last 24 hours**, uncheck the **Allow use** checkboxes for the selected employee or guest networks.

Managing Clients

Aruba Instant On provides details of the clients in your network.

Viewing AP Clients

The **Client Details** page provides additional information about the clients in your network.

To view the **Client Details** page for a specific client, follow these steps:

1. Click the **Clients** () tile on the Instant On home page. The **Clients** page is displayed.
2. Click the (>) icon beside the client name from the clients list. The **Client Details** page for the selected client is displayed.

For more information, refer to [Client Details Information](#)

Viewing Details of Active Clients

The following information is available on the **Client Details** page. For details on the client information preceding the **Client Details** page in the Aruba Instant On web application, see [Client Details Information](#).

Table 21: *Client Details Information*

Parameter	Description	Mobile App	Web Application
Name	Denotes the name of the client.	Yes	Yes
IP Address	Denotes the IP address of the client. NOTE: Not displayed by default. See Filtering Client Information in the Web Application for details on displaying this parameter on the Clients page.	Yes	Yes
OS	Operating system (OS) of the client device. NOTE: Not displayed by default. See Filtering Client Information in the Web Application for details on displaying this parameter on the Clients page.	Yes	Yes
Network	Shows the network to which the client is connected. Click the network name to view the Network Details page. See Employee Network for more details on the Main Network Details page, or Guest Network for more details on the Guest Network Details page.	Yes	Yes
Device	Shows the access point to which the client is connected. Click the device name to view the Access Point Details page. See Access Point Details for more details on the Access Point Details page.	Yes	Yes
Duration	Denotes the amount of time that the client has been connected to the network.	Yes	Yes

Parameter	Description	Mobile App	Web Application
Signal	Indicates the client signal quality, based on the client's Signal-to-Noise Ratio (SNR). See Table 2 for details on the different signal qualities.	Yes	Yes
MAC Address	Denotes the MAC address of the client.	Yes	Yes
Downloading	Shows the download throughput within the last 30 seconds, in bytes per second.	Yes	Yes
Uploading	Shows the upload throughput within the last 30 seconds, in bytes per second.	Yes	Yes
Top Application Category	Shows the most frequently used application type.	No	Yes
Applications Chart	Shows the application usage data for the selected client, in bytes. In the Aruba Instant On mobile app, tap the donut chart preceding Transferred to open the Applications chart for the client.	Yes	Yes
Transferred	Shows the total amount of data transferred during the client session, in bytes.	Yes	Yes

Table 22: *Signal Quality*

Signal Quality	Icon	Signal Strength
Good		30 dB or higher
Fair		16 dB—29 dB
Poor		15 dB or lower

Viewing Application Information for a Specific Client

You can view the application usage information for a specific client in your network by selecting a client from the **Clients** list. See [Viewing Application Information](#) for details on the type of application usage information that is displayed.

In the Web Application

To view application information for a specific client in the Instant On web application, follow these steps:

1. Click **Clients** on the Instant On home page. The **Clients** page opens.
2. Click the (>) icon beside the client name from the **Clients** list to view the details of the client. The **Applications** chart for the selected client is displayed directly on this page.

In the Mobile App

To view application information for a specific client in the Instant On mobile app, follow these steps:

1. Tap **Clients** on the Instant On home screen. The **Clients** screen opens.
2. Select a client from the **Clients** list to open the **Client Details** screen.
3. Tap the donut chart preceding **Transferred** to open the **Applications** chart for the selected client.

Blocking and Unblocking Clients

The Instant On mobile app and web application allows you to block clients from associating with any of the APs on site. Each client can only be blocked manually using the Instant On mobile app or web application. Client blocking is possible only for clients who are already connected to the network. At any point in time, you may choose to unblock a blocked client by visiting the Blocked Clients list.

Follow these steps to block a client from accessing the network:

1. Tap or click on the **Clients** () tile in the Instant On homepage of the Instant On mobile app or web application. The list of connected clients is displayed.
2. From the list of **Connected clients**, block the client which should not be allowed to access the network.
 - In the mobile app—Swipe from left to right on the client from the connected list and tap on the block icon. The client is immediately blocked and moved to the Blocked clients list.
 - In the web application—The block button is displayed when hovering the cursor at the end of the client row. Click the block button and the client is immediately blocked and moved to the Blocked clients list.

Follow these steps to unblock a blocked client:

1. Tap or click on the **Clients** () tile in the Instant On homepage of the Instant On mobile app or web application. The list of connected clients is displayed. Tap the drop-down arrow () in the Clients page and select **Blocked clients**. The blocked clients appear grayed out.
2. From the list of **Blocked clients**, unblock the clients you wish to provide access to the network again. The clients should be able to immediately access the network once they are unblocked.
 - In the mobile app—Swipe from left to right on the client from the blocked clients list and tap on the unblock icon. The client is immediately unblocked and moved to the Connected clients list.
 - In the web application—The unblock button is displayed when hovering the cursor at the end of the client row. Click the unblock button and the client is immediately unblocked and moved to the Connected clients list.

Filtering Client Information in the Web Application

To filter the information that is displayed on the **Clients** page of the Instant On web application, follow these steps:

1. Click **Clients** on the Instant On home page. The **Clients** page opens.
2. Click the tool () button at the top-right corner of the **Clients** list to open the parameter drop-down list.
3. Select the parameters that you want to display or hide from the **Clients** page.
 - Parameters with a green check mark are displayed on the **Clients** page.
 - Parameters without a green check mark are not displayed on the **Clients** page.

To restore the default settings, follow these steps:

1. Click **Clients** on the Instant On home page. The **Clients** page opens.
2. Click the tool () button at the top-right corner of the **Clients** list to open the parameter drop-down list.

3. Select **Restore Defaults** to restore the Instant On to the default settings.

Sorting Client Information in the Web Application

Client data can be sorted in the Instant On web application to help you locate the information you need efficiently. For example, client data can be sorted in alphabetical order based on the client name. Click one of the parameters at the top of the **Clients** list to sort the information based on your needs.

Managing Your Account

The **Account Management** page allows you to modify your administrator account information for all associated sites.

NOTE: The **Account Management** page is only available from the **My Sites** page when your account is registered to multiple Aruba Instant On sites.

Modifying Administrator Account Information

To modify your administrator account information for all associated Aruba Instant On sites, follow these steps:

In the Web Application

1. From the page header, click the icon next to your account name and select **Account Management** from the advanced drop-down menu on the Aruba Instant On header. The **Account Management** page is displayed.

NOTE: The alphabet in the icon will appear based on the first letter of your registered email account.

2. Modify the password for your registered account.
 - Select the **Change password** tab.
 - To modify your account password, enter your current password, followed by a new password.
3. Click **Change password** to save your changes.

In the Mobile App

1. In case of multiple sites, select the advanced menu () icon on the **My Sites** screen. Else, tap the icon with an alphabet, on the mobile app header. The **Account Management** page is displayed.

NOTE: The alphabet in the icon will appear based on the first letter of your registered email account.

2. Tap **Password**.
3. Under Change Password, enter your current password, followed by a new password.
4. Click **Change password** to save your changes.

The Account management screen also allows you to enable or disable alert notifications for the site. For more information, see [Notifications](#).

Notifications

Notifications are standard messages that are sent to mobile devices connected to the Aruba Instant On when an alert is triggered by the system. The notification mechanism updates administrators about any alerts that are triggered on site.

When you click a notification, your registered device automatically opens the Instant On app and takes you to the corresponding management interface for the Instant On site. The stored user credentials are validated against the management interface. Upon successful login, you are directed to the **Alerts** page corresponding

to the selected notification. If no action is taken on the alert, the notification remains in the notification bar and can still be viewed at anytime until it is cleared.

Enabling or Disabling Alert Notifications

To enable notifications for alerts, follow these steps:

1. Go to the **Notifications** page in the Aruba Instant On application.
 - In the web application—From the page header, click the icon next to your account name and select **Account Management** from the advanced drop-down menu on the Aruba Instant On header. The **Account Management** page is displayed. From the **Account management** page, click **Notifications** to open the **Notifications** page.
 - In the mobile app—Tap the icon with an alphabet, on the mobile app header. The **Account Management** page is displayed. From the **Account management** screen, tap **Notifications** to open the **Notifications** screen.

NOTE: The alphabet in the icon will appear based on the first letter of your registered email account.

2. Click the notification toggle switch(es) to enable () or disable () the alerts you want to be notified about. For more information on viewing and managing alerts, see [Alerts](#).

NOTE: By default, the notifications are enabled for all three alert types.

Notification Messages

The Operating System (OS) of each registered device determines how the notification messages are displayed. The following table lists the notification messages and their corresponding alert types:

Table 23: *Notification Messages and Alert Types*

Notification Message	Corresponding Alert
Connection problem	Cannot access Internet
Device problem	<device> has problem <device> unauthorized <device> is down

Simple Notification

By default, a simple notification is displayed on 2 distinct lines:

- The first line displays the name of the alert.
- The second line displays the site name.

Collapsed Notification

When the system triggers multiple alerts from the same site, the notification mechanism collapses all the notifications generated from the alerts. The notification mechanism displays it as a single notification on the registered device.

Firmware is the software programmed on Instant On APs to make sure the devices run and provide functionality to users. The firmware installed on the Instant On APs is the Instant On software image. When the firmware is upgraded, device performance and functionality is improved through feature enhancements and bug fixes.

Upgrading the AP Firmware

When an AP is deployed into the network, it joins an Instant On site, which is a group of APs that are configured and managed from a single location. Upon joining the site, the AP automatically syncs its Instant On software image with the software image version configured on the site. Each time the software image is updated on the site, all APs in the site are upgraded to the new software image version.

Instant On Image Server

Every version of the Instant On software image is uploaded and stored in a public cloud-based image server that is hosted by Aruba. The image server always contains the latest version of the Instant On software so that you can keep your system up-to-date. See [Updating the Software Image on an Instant On Site](#) for more details on updating your APs to the latest version of the Instant On software image.

Updating the Software Image on an Instant On Site

Instant On allows you to control when a software update on the site needs to take place. This is done by configuring a day of the week and time of your preference for the site on the Instant On mobile app or web application.

To create a schedule for the software update to be installed automatically on the site, follow these steps:

1. Navigate to the Site management page.
 - In the web application—Click the settings menu () icon on the Aruba Instant On header and select **Site management** from the drop-down menu. The **Site management** page is displayed.
 - In the mobile app—Tap the advanced menu () icon on the Aruba Instant On home screen. Select **Site management** from the menu.
2. Click the **Software update** tab to view the scheduling options.
3. Select the **Preferred day of the week *** for the software update to be installed automatically.
4. Select a suitable **Time *** from the drop-down menu.

Each AP installs the new software image and reboots. After every AP in the site has rebooted with the new version of the Instant On software image, the upgrade process is complete.

NOTE: Critical software updates may override the settings configured by you and will be installed within 24 hours.

Verifying Client Connectivity During Upgrade

APs are automatically rebooted with the new version of the Instant On software image during a software upgrade. When an AP goes down during the reboot, the wireless clients connected to that AP are either moved to another AP in the Instant On site or completely dropped from the network. Though this scenario is expected, keep in mind that a firmware upgrade can cause major disruptions for the clients in your network.

This is limited to the time-period that the APs take to reboot, which is 3-5 minutes. We recommend that you schedule this activity for when you don't expect users connected to the network actively.

Upgrade Failure

If a software upgrade fails, the Instant On continues to run the software image version currently installed on the APs. You can continue running the current software image version or the upgrade will be retried at the next time set by the schedule.

Instant On Mobile App Compatibility

Though the Instant On mobile app is backward-compatible with older versions of the Instant On software image, the Instant On software image is NOT backward-compatible with older versions of the mobile app. If the mobile app installed on your device is older than the Instant On software image running on your Instant On site, a warning message appears when you attempt to launch the app.

The mobile app can only be launched if it is updated to the latest version. To update the mobile app, click the app store icon that is available below the warning message.

To help the administrator troubleshoot problematic situations, a troubleshooting assistant is used for managing the Aruba Instant On. It helps the user identify an issue and provide guidance on how to resolve it. The troubleshooting assistant is designed to cover most typical situations and heavily relies on LED patterns to identify problems.

The troubleshooting assistant can be invoked from the **Alert Details** page:

1. Navigate to **Site Health** and click **Show alert history**.
2. In the **Alert Details** page, review the **Recommended actions** to clear the alert.
3. For additional troubleshooting options, click **Need more help?**. The **Troubleshooting Assistant** page is displayed with the following information:
 - a. Most typical situations based on the LED patterns.
 - b. Recommended actions.

Troubleshooting Assistant

Check your Instant On device lights and select the corresponding situation below.

No lights (selected)

Blinking Green

Flashes Green - Amber

Solid Green

Solid Amber

Solid Red

Device has no power

Review the different power options and verify that cables are properly connected.

- What are the power options for Instant On devices?

Aruba Instant On devices can be powered using an approved Power Adaptor or Power over Ethernet (PoE) injector. Alternatively, you can use any switch compatible with the 802.3af Power over Ethernet standard.

Note: The Aruba Instant On AP17 designed for outdoor environments can only be powered using Power over Ethernet. Once properly powered up, your device lights will start blinking green indicating that it is starting.

List of approved Power Adaptors and Power over Ethernet (PoE) injectors:

SKU	Description
R2X20A	Aruba Instant On 12V/30W Power Adaptor
R2X21A	Aruba Instant On 48V/36W Power Adaptor
R2X22A	Aruba Instant On 15.4W 802.3af PoE Midspan injector

- How to connect an Instant On device?

To complete the setup of your Aruba Instant On device, it needs to be powered up and connected to a DHCP-enabled local network providing direct access to the internet. For additional help on connecting your device, review and follow the steps in the quick card provided with your device. After few minutes, your device lights should start alternating between green and amber indicating that it is ready for setup.

4. Check the status of the LED lights on the Instant On and click the corresponding solution in the troubleshooting assistant.
5. If you are unable to find a solution to the problem, navigate to [Help & Support \(\)](#)—Leads you to the [Contact support page](#). **Following are the available technical support options:** to view additional support options.
