Publicly posted project plans:
A taste of project management to better support cross functional projects in a large academic library

Wilhelmina Randtke, Head of Libraries Technologies and Systems, Georgia Southern University Libraries

American Library Association Core Project Management Interest Group Session, Virtual, July 11, 2024
Abstract

The Georgia Southern University Libraries Technologies and Systems Department provides core infrastructure underlying a large academic library with 64 employees, not counting student workers, spread across two cities. Most departments work within a single area of librarianship. Meanwhile the Libraries Technologies and Systems department supports many projects which impact multiple departments, including online services like the ILS configuration, interlibrary loan service, and the website. This presentation will describe use of project plans to coordinate communication about projects between people working in different departments, units, and roles and to keep things easy to follow for management. This will be presented in the context of some recent projects as examples, a server upgrade for the ILLiad interlibrary loan services, and a project to set up permissions in the ILS for emeritus faculty.
Background

Georgia Southern University Libraries

- GSU is classified as an R2 Carnegie institution, offering doctoral degrees with high levels of research activity.
- The main campus is in Statesboro, with a second location in Savannah and a third at the Liberty Center at Fort Stewart.
- GSU has 708 Tenured and Tenure track faculty members.
- The University Libraries have 64 employees, including all non-student employee roles.
- As of Fall 2023, enrollment was 26,488 over three campus locations.
Project Plan

● Project plans at the libraries slant towards less formal/detailed.
  ○ “Project plans and documents demonstrate that the level of planning is appropriate for the project.” (PMBOK Guide, 2021).
  ○ “Simplicity--the art of maximizing the amount of work not done--is essential.” (Agile Alliance, 2001).

● The main reason for the project plan at the GS Libraries is internal communication.
  ○ “The primary uses of the project plan are to document planning assumptions and decisions, facilitate communication among project stakeholders, and document approved scope, cost, and schedule baselines. A project plan may be summarized or detailed.” (PMBOK Guide, 2000).
The project plan can be linked from the intranet, get linked in emails, and get pulled up during meetings or conversations.
Parts

Executive summary (for big picture conversation and approvals):
- Roles (project participants and roles)
