

How to Put Your Family History on the Map: Georeferencing and Geocoding Historical Information

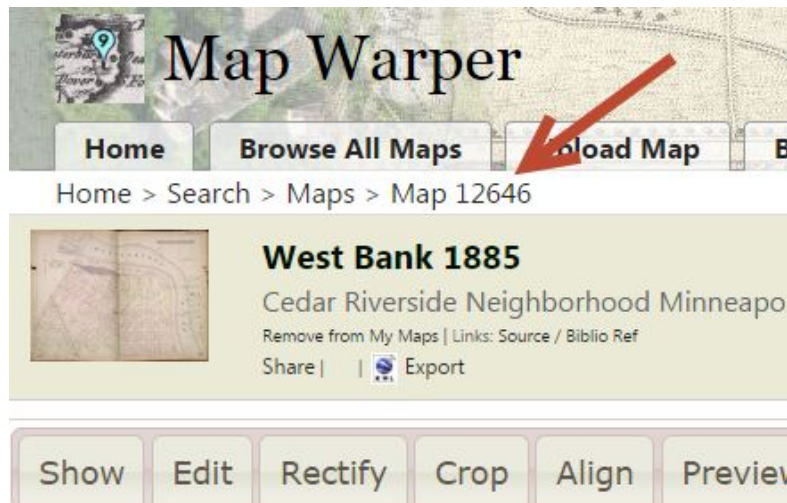

Slides – <http://z.umn.edu/ALAgeo2017>

Guide – <http://z.umn.edu/ALAgeo2017guide>

Data Examples – <http://z.umn.edu/ALAgeo2017data>

Georeferencing in Map Warper

- Go to <http://mapwarper.net/> - create an account
- To start, click the Upload Map button at the left
- Enter metadata (yay for metadata!)
 - Title, Description, Year, Source
- Choose file and Create
- Click on Rectify tab to start georeferencing
- Use Reference map (on right) to find the area for your map
- Click Add Control Point button 
 - Click on scanned map, then basemap
 - Once both are in the right spot, click **Add Control Point** below maps
- Click the hand icon  to move the map around in between adding control points
- Once you have enough, click Warp Image button at bottom left
- Map will be overlayed on right, you can then add more points if needed and Warp Image again
- Click Preview Map tab to see map
- Click on Export Tab:
 - WMS Capabilities URL (web mapping service)
 - Can add as Layer from Web in ArcGIS Online
 - Use WMS OGC Web Service option
 - URL will be in this format: “<http://mapwarper.net/maps/wms/12646?>”
 - Use the URL above and substitute the number from your map

Creating Your Data

- Easiest way is to use a spreadsheet (Excel or Google Sheets)
- Create columns for the information you want to display
 - Name
 - Address
 - City
 - Country
 - Latitude
 - Longitude
 - Birth year
 - Information link
 - Photo link
 - Text Description
- Enter the information in the spreadsheet (notes):
 - For addresses, be sure to put address, city, country in different columns
 - **Historical** addresses can be problematic if the street no longer exists; in this case, try to determine where the address was located and determine the lat/long
 - Latitude/Longitude is the most accurate (see [slides](#) for options for determining lat/long)
 - Information link should be to a web page
 - Photo link should be to an image (should end in .jpg or similar)
- Save your data as a spreadsheet format (.xls, .xlsx, or in Google Sheets)
- Save or export your data as a CSV file
 - In Excel, Save As → Save As Type → CSV (Comma Delimited)
 - In Google Sheets → Download As → CSV

Using ArcGIS Online to Display Your Data

- Go to <http://www.arcgis.com/>
- Click Sign In on the upper right (Create a Public Account if you do not have one)
- If you already have maps, they will be under My Content
- Otherwise, click the “Map” link at the top to open a map
- To add your georeferenced map layer:
 - Click Add  Add ▼
 - Add Layer from Web → select “A WMS OGC Web Service” from the drop down
 - Use the URL from MapWarper section above, for example:
<http://mapwarper.net/maps/wms/21254?>
 - Click Get Layers
 - Click Add Layer
 - You may need to navigate on the map to where your layer would appear
- To add your family data:
 - Click Add  Add ▼
 - Add Layer from File
 - Choose your CSV file
 - Click Import Layer

- **Geocoding notes:**

- If you have latitude/longitude, select that at the top and select which fields the coordinates are in
- If you have addresses or cities, be sure the fields are selected for each aspect of the location
- Default country is United States – strangely, “World” is in the drop down as well, in case you have cities from multiple countries

Add CSV Layer

Locate features using:

☐ Latitude/Longitude ☒ Address ☐ None, add as table

Country: World

Review the location fields. Click on a cell to change it.

Field Name	Location Fields
Family_Member	Not used
City	City
Country	Country
Born	Not used

ADD LAYER CANCEL

- Click Add Layer when done
- To format how your data looks:
 - Choose Show location only and then click the Options button

1 Choose an attribute to show

Show location only

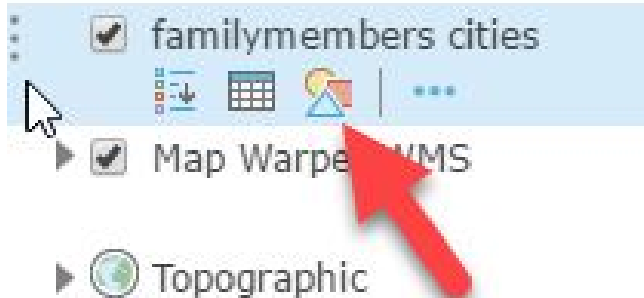

2 Select a drawing style

Location (Single symbol)

OPTIONS

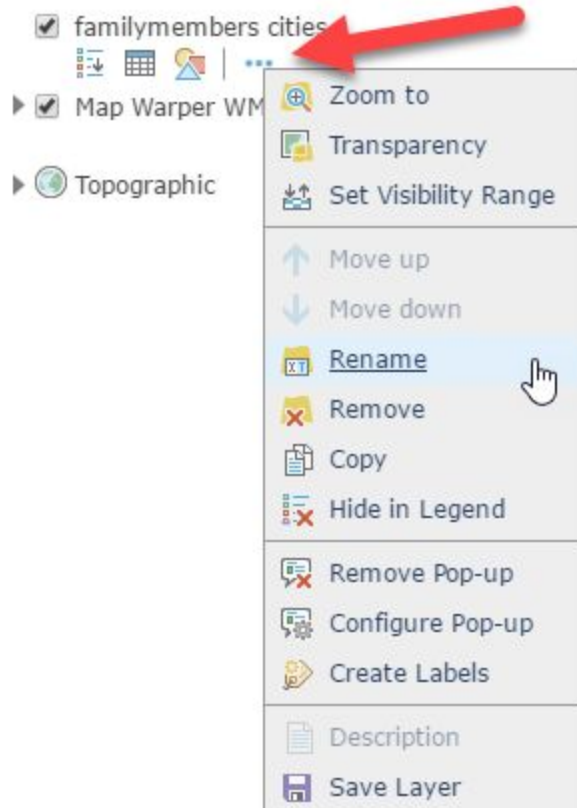

- Click “Symbols”
- Choose your symbol type and size
- Click Ok, then Ok, then Done
- Note: To change this settings later, hover over the layer in the Contents section and click the shapes

Contents

- There are many other options, such as changing the name of the layer, if you hover over the layer in the Contents section and click the three dots

Contents

- For example, you can Configure Pop-up to change how information appears when you click on the symbol displayed on the map
 - Click the + symbol next to the Pop-up Title and select the data field to display here (such as Family Member)

Configure Pop-up

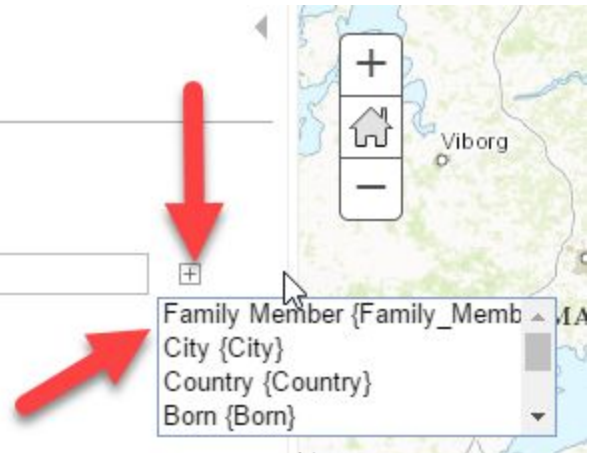

familymembers_cities

☒ Show Pop-ups

Pop-up Title

Pop-up Contents

Display: A list of field attributes

- Click Configure Attributes to choose which items to display or not (or change the label in the pop-up); for this example I've unchecked FID (not needed), Family Member (already using it as a title for the pop-up) and Photo Link (because I will also display that as an image)

Configure Attributes

Check the fields you want to display and edit. Select a field to change its alias, order it, and format it.

<input type="checkbox"/> Display	<input type="checkbox"/> Edit	Field Name	Field Alias
<input type="checkbox"/>	<input checked="" type="checkbox"/>	{Family_Member}	Family Member
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	{City}	City
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	{Country}	Country
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	{Born}	Born
<input type="checkbox"/>	<input checked="" type="checkbox"/>	{Photo_Link}	Photo Link
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	{Info_Link}	Info Link
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	{Text_Description}	Notes
<input type="checkbox"/>	<input type="checkbox"/>	{FID}	FID

Editing

TextBox Type

Single Line

Hint

- To have the photo show up in the pop-up, click Add -> Image

Pop-up Media

Display images and charts in the pop-up:

- I only want the photo to appear, so I removed the text from the Title box, clicked the + symbol next to URL, and selected Photo_Link

Configure Image

Specify the title, caption and URL for this image. Insert field names to derive the display from attribute values.

Title:

Caption:

URL:

Link (optional):

OK CANCEL

Photo Link {Photo_Link}
Info Link {Info_Link}
Notes {Text_Description}
FID {FID}

- Click OK to finish configuring the pop-up
- Completed pop-up looks like this:

- The last step is to save and share
 - Click the Save button at the top, give your map a title, add tags (required), and give it a summary description
 - Click the Share button at the top
 - Once you check the “Everyone (public)” box, options will appear to embed in a website (optional)
 - A “Link to this map” is also on the Share dialog – send this to anyone to let them view your map

Share

Choose who can view this map.

Your map is currently shared with these people.

☒ Everyone (public)

☐ Members of these groups:

- ☐ Camping!
- ☐ Test Group
- ☐ University Libraries
