

## Telemedicine & eHealth in France : strategy, state of art and market development

Room : M100C on the mezzanine level - Convention Center,  
**Monday, May 16 from 12:00 pm - 1:30 pm**

Welcome to France! After years of international experience sharing in telemedicine and eHealth, CATEL, the French National Resource Center in telemedicine and eHealth, as an Institutional member of ATA, is pleased to organise this special session dedicated to telemedicine and eHealth in France, in partnership with ATA.

Multidisciplinary point of views will be expressed, in the presence of the Ministry for Health and solidarities, of leaders in eHealth implementation, of health professionals and industrials, to present how eHealth is developing in France, how it is governed, how it is organised. Several examples of innovative projects and services will be presented as examples.

This session will be a good occasion to get a quick insight on the perspectives and potential of eHealth in French, to share experience and, hopefully, to start new actions of cooperation!
