The Cincinnati Chapter hosted an ASA traveling short course, “Fundamentals of Causal Inference: With R,” on September 12. The instructor was Babette Brumback, professor emerita at the University of Florida. The day-long course was held at the Faculty Enrichment Center at the University of Cincinnati and boasted 41 registrants, the most well-attended, in-person course in recent years.

Also planned for this year, Won Chang of the University of Cincinnati will present on ice model calibration using semicontinuous spatial data November 14 at 3:30 p.m. This talk will be held virtually and in-person at the University of Cincinnati. Email Ashley Clark for information about attending.

Finally, we are working with the Kentucky Chapter on a joint event that will include presentations of student research. This will be held at the University of Kentucky this spring.

Email Ashley Clark if you are interested in learning more about Cincinnati Chapter events.
Dr. Babette Brumback engages attendees at an ASA Short Course on causal inference that was hosted by the Cincinnati Chapter.
