Course Overview

This is a first course in Strategy. It is meant to give a foundational knowledge of modern frameworks and concepts in the field. The course will put primary emphasis on the internal strategy formulation, analysis and implementation and is complementary to the Economics of Strategy Elective, which will cover external industry factors and analysis in more depth.

This course focuses on questions like: Where do you want to go with your organisation? What are you trying to achieve? Why? How? We will be exploring different concepts and tools that can help you identify the competitive positioning, the resources the company needs to obtain, and the organisation it needs to build. We will also focus on how you develop and implement a consistent and coherent strategy in today’s dynamic and competitive business world.

Strategic analysis assumes that most resource and product markets are fundamentally imperfect and are not necessarily in competitive equilibrium. In fact, they would often seem to be in a state of permanent disequilibrium. Opportunities constantly emerge when industry conditions change, or when innovating firms change these conditions. Firms achieve competitive advantage by understanding these conditions and opportunities, by designing strategies and organizations that match their capabilities to available opportunities and by executing well. We will therefore also discuss your roles as responsible general managers in organizations and how you can manage and implement strategy.

The course covers a number of analytical tools and frameworks that facilitate the implementation of this process.

Class Dynamics and Preparation

This course relies heavily on the case discussion approach and it is therefore important that you read the cases carefully in preparation for each class. We will spend a substantial part of each class discussing the assigned case. This is a very interactive process that seeks to get multiple viewpoints and perspectives on the table and to debate the pros and cons of various alternatives and ideas. I will also present conceptual frameworks that are useful in analysing general strategy issues found in the cases and real business settings.
Learning Objectives

To achieve the grade 12, students should meet the following learning objectives with no or only minor mistakes or errors. At the end of this course, the participant should be able to:
- Discuss the logic of key models, frameworks and analytical approaches from the Strategic Management domain
- Correctly select and apply frameworks, concepts and theories Strategic Management domain in a given case situation
- Present argumentation for the relevance of the selected frameworks, concepts and theories to the given case
