STEP UP is a national community of physics teachers, researchers, and professional societies. We design high school physics lessons to empower teachers, create cultural change, and inspire young women to pursue physics in college.

High school physics teachers can join the movement and adopt the evidence-based lessons and support materials on:

- **Careers in Physics**
- **Women in Physics**
- **Everyday Actions to shift classroom culture**

---

**Percentage of women participants in physics at various academic stages**

There is near-parity in high school physics enrollments between young men and women, but this percentage drops sharply by college entrance (yellow).

High school teachers are highly influential in helping to change this trend.

---

Joining the movement is simple.
