PEELING BACK THE LOWCOUNTRY OF SOUTH CAROLINA WITH LIDAR

Presented by:
Jonathan Byham

GPI GEOSPATIAL, INC

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

Multi-disciplined geospatial surveying and mapping branch of Greenman-Pedersen, Inc. (GPI)

- Land Surveying
- Aerial Lidar & Imagery
- Photogrammetry
- Mobile Lidar
- Terrestrial Lidar
- SLAM
- GIS
- SUE

DRAYTON HALL – CHARLESTON, SC

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA

DRAYTON HALL – CHARLESTON, SC

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

- 18th Century Plantation located within the Ashley River Historic Corridor of Charleston, SC
- 665 acres of a former indigo, rice, and cotton plantation landscape
- Only estate on the Ashley River that survived the Civil War

DRAYTON HALL – CHARLESTON, SC

RECREATING A HISTORICAL LANDSCAPE

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

- The Drayton Hall property and the entire Ashley River Historic District (ARHD) is a highly sought-after area for historical preservation
- The ARHD is also challenged by climate-driven factors and increased suburban development
- Drayton Hall came to GPI Geospatial to better protect the known and yet-to-be discovered

DRAYTON HALL – CHARLESTON, SC

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

- Collaboration began Spring 2021
- Project expanded into two separate, yet overlapping study areas
- Drayton Hall – 665 acres
 - Highest level of detail possible with full range of geospatial products
- Ashley River Historic District – 72.8 mi² (46,599.3 acres)
 - High level of detail for project area of its size, but less than Drayton Hall project area

THE PROCESS TO UNCOVERING THE UNKNOWN

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

THE PROCESS:

- Survey control
- Aerial acquisition
- Lidar calibration and classification
- Topographic mapping
- Aerial Triangulation
- Orthorectification of imagery

THE PROCESS TO UNCOVERING THE UNKNOWN

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

- Classified Lidar Point Cloud - Colorized
- Digital Elevation Models (DEMs) and Digital Surface Models (DSMs)– 1' cell size raster files
 - Hydro-conditioned DEMs
- Engineering-grade full topographic mapping – GIS and CAD formats
 - Planimetric features
 - 1' contours
 - DTM with breaklines and spot elevations
- 3Band Digital Orthophotography

DATA COLLECTION

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

DRAYTON HALL PROPERTY - AERIAL ACQUISITION

Fixed-wing manned aircraft,
Riegl VQ-1560 II co-mounted
with PhaseOne IXM 150 MP

Flying height – 1,500' above
ground level (AGL)

50% sidelap

Lidar Point Density – 90 ppm²
single pass (180 ppm² with
overlap)

Imagery Collection – 1.5"
Ground Sample Distance (GSD)

Flight Lines – 7

ASHLEY RIVER HISTORIC DISTRICT - AERIAL ACQUISITION

Fixed-wing manned aircraft,
Riegl VQ-1560 II co-mounted
with PhaseOne IXM 150 MP

Flying height – 3,500' above
ground level (AGL)

50% sidelap

Lidar Point Density – 40 ppm²
single pass (80 ppm² with
overlap)

Imagery Collection – 3" Ground
Sample Distance (GSD)

Flight Lines – 27

AFRICAN AMERICAN CEMETERY

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

Grave Shaft Depressions

Previously unidentified grave shafts, ground-truthed through pedestrian survey and clearing

PHOSPHATE MINING

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

PHOSPHATE MINING

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

A LIDAR topographic map of a phosphate mining area in South Carolina. The map uses a color gradient from blue (low elevation) to yellow and orange (high elevation). Numerous linear features, including hand-dug phosphate cuts and a short-line railway bed, are visible. Three blue arrows point from text labels on the right to these features.

Hand-dug Phosphate Cuts

Short-line Railway Bed

AGRICULTURAL EVIDENCE

PEELING BACK THE
LOWCOUNTRY OF
SOUTH CAROLINA
WITH LIDAR

Map of part of the Drayton Hall plantation, c. 1790
The grid system marks "tasks" or areas allocated for one slave to work on a given day

CONCLUSION – LOOKING FORWARD

PEELING BACK THE LOWCOUNTRY OF SOUTH CAROLINA WITH LIDAR

- High density aerial lidar data proved to be an efficient tool for this historical landscape preservation project
- Having accurate elevation models of this historical landscape has enabled researchers to pinpoint areas of interest for future
- Future remote sensing and surveying projects lie ahead

QUESTIONS?

PEELING BACK THE
