

## **Burj Clean Energy Modaraba**

### **AVP, Investments**

#### **Karachi**

This isn't a back-office finance role. You'll be at the center of deals that bring renewable energy projects to life — from sourcing and structuring transactions to achieving financial close and seeing projects reach commercial operation.

Here's what the role involves:

- Originating and sourcing clean energy deals across corporate, C&I, SME, and retail segments
- Structuring complex renewable energy transactions
- Arranging debt financing — identifying lenders, negotiating terms, securing capital
- Supporting fund-level capital raising including equity and Sukuk issuance
- Managing the full deal lifecycle: approvals, documentation, financial close, and COD support

What we're looking for:

- 2–4 years in project finance, investment banking, or transaction management
- Strong financial modelling and deal structuring skills
- Experience taking deals from origination to close
- Bachelor's in Finance, Economics, or Business (CFA / Master's preferred)
- Knowledge of Pakistan's energy markets and regulatory landscape is a plus

If you want your work to directly accelerate Pakistan's clean energy transition, this is the role.
