About

Maiden Century is a New York based data analytics company. The organization sits at the confluence of finance, portfolio construction, big data, visual interfaces and predictive modeling. We build cutting edge applications that assist some of the world's leading asset management organizations in developing more accurate, timely and intuitive insights from their data assets for the purpose of idea generation, financial modeling and portfolio monitoring.

Maiden Century was founded by Qaisar Hasan in 2017. Qaisar graduated with an MBA from Karachi's Institute of Business Administration in 1993. He has nearly 30 years of experience in various sell-side and buy-side roles, encompassing organizations such as Bear Stearns Jahangir Siddiqui (Pakistan), Jardine Fleming (Pakistan / Indonesia), JP Morgan (Indonesia), Alliance Bernstein (US) and Point72 (US). He was recognized as one of the top Asian analysts by Institutional Investor magazine in its 2000 All-Asia rankings, as well as by The Wall Street Journal for being the #1 ranked analyst covering US Telecommunication stocks in 2008.

Our current workforce is spread across New York, Dublin and Lahore. We are now looking to establish a beachhead investment research office in Karachi in order to better service the analytical needs of our growing and sophisticated client base. These positions provide exciting opportunities to promising candidates to expand their professional horizons beyond Pakistan's nascent capital markets, and to work on cutting edge projects alongside some of the most forward-thinking, data savvy hedge funds, mutual funds and sovereign funds in the world. Maiden Century offers highly competitive compensation, along with the opportunity to participate in our company's equity participation program.

Analyst, Research
- Build financial models and translate them into algorithmically generated forecasts through coordination with data science team
- Conduct research on new sectors and companies on an as-needed basis
- Maintain current models and run QA to proactively catch and fix any anomalies
