

PROPOSED MODIFICATION TO PRACTICE 4-8 (Redline follows)

4.8 Facility Marking

Practice Statement:

Facilities are adequately marked for conditions.

Practice Description:

Facility locators match markings to the existing and expected surface conditions. Markings may include one or any combination of the following: paint, chalk, flags, stakes, brushes. All marks extend a reasonable distance beyond the bounds of the requested area. Proper training for all facility locators includes properly identifying the varying surface and environmental conditions that exist in the field and what marking methods should be used. Conditions that may affect markings are rain, snow, vegetation, high traffic, construction, etc.

Offset markings offer a valuable marking alternative by providing precise measurements/directions from established and permanent objects, assisting contractors in preserving marks, and conducting excavation best practices. They enhance visibility and durability in diverse weather conditions, serving as reliable reference points to ensure accuracy of establishing the tolerance zone and safety throughout construction, regardless of the weather. Communication with the contractor is also critical when using offset marking to describe locate utilities.
