Course Prerequisite: One of the following: Successful completion of the Trauma Nursing Core (TNCC) Course or Trauma Tactics Course; or one-year trauma experience with charge nurse and/or preceptor experience; or one year trauma experience with recommendation from manager.

Cancellation, Transfer, or Additional Information: Please call Wendi Lowell at 614-255-4417 or email wlowell@centralohiotraumasystem.org.

The Teaching Model

Developed by content experts from the Central Ohio Trauma System (COTS) member hospitals, this course focuses on the learning needs of the critical care registered nurse who provides care to traumatically injured patients admitted to trauma centers. A systematic teaching model involves simulation training methods in small groups using scenarios, hands on training, and post-scenario debriefing sessions. Upon completion of the course, the student will:

- Demonstrate appropriate nursing assessment and intervention strategies for patients with Abdominal Compartment Syndrome.
- Describe the management of cardiac tamponade including identification of potential life-threatening complications.
- Identify nursing interventions that address complications of acute traumatic brain injury.
- Describe the management of post-operative hemorrhage, including the need for and implementation of massive transfusion protocols.
- Differentiate between septic and hypovolemic shock, and describe related priorities for nursing care and intervention.
- Describe the pathophysiology, signs, symptoms and appropriate nursing care for patients with Fat Embolism Syndrome.
- Describe the management of lower extremity compartment syndrome to include identification of limb threatening complications.

Fulfilling a need

The trauma nursing education subcommittee with the trauma program managers identified there were limited educational resources for nurses in the post resuscitative arena of trauma care (surgical/trauma critical care and stepdown units).

Trauma in the First 48 Hours[®] was developed to provide the needed continuity of care with a focus on the critical care needs of the traumatically injured patient.

Brochure updated December 2018

Successful completion of this course requires:

- Attendance at the entire event.
- Participation in the simulation scenarios and debriefing sessions.
- Completion and submission of the participant evaluation form.

This continuing nursing education activity was approved for 6.83 contact hours by the Ohio Nurses Association, an accredited approver by the American Nurses Credentialing Center's Commission on Accreditation (OBN-001-91).

Approval valid through 9/18/19
