

Manufacturing & Industrial Committee Responsibilities

Objectives

- a) Increase the profile of Manufacturing and Industrial as an asset class within CoreNet – I would include distribution within this and off the
- b) Back of this look to develop the MI Group as a leading service line within CoreNet but ultimately as a go to group from outside CoreNet. I see this as being as aspiration for all operational Groups
- c) Improve connectivity with other Op groups in CoreNet
- d) Develop a succession plan for both my role and also that of the Young Leader

Events and Programmes

- a) Deliver at least one event during the year, whether a breakfast meeting or knowledge learning event
- b) Develop a stream of white papers and other articles that could be published – target for two a year to be published; of which potentially one is a combined paper
- c) Liaise with other work streams to explore the opportunity to promote joint events and activities

Resources

- a) As a minimum a young leader is required however with the cross working that is anticipated that all service lines are focusing on, both between each other and with external parties
- b) Two additional M&I committee support members.
