"Nobody roots for Goliath"

- Wilt Chamberlain

Welcome to the new and improved CSI Indy newsletter!

As we embark on our adventure of providing YOU with the most up-to-date (and relevant) information in the construction industry, we encourage you to provide us with any and all feedback. Good, bad, and even the ugly is welcome. What type of articles would you like to read? What type of events are you interested in? Anything you think the chapter should be aware of is welcome.

Your Humble Narrator,

Mike Halstead
Indianapolis CSI Newsletter Co-Editor

Duro-Last
The World's Best Roof
Wasn't our 44th Annual CSI Indy Trade Show a success? Attendance increased enough that our exhibitors noticed, the booths were full and the craft beer vanished. Not too shabby. Even The Hat showed up and hung out with Joltin' Joe McGuire. Great job again to Brian Detty and the band - and Amy Herbertz for sending out constant e-mail blasts and reminders. We had 100 who reserved online but didn't attend - shame, shame, shame. Guilty? Until proven innocent. We need to send Guido out to take out their kneecaps - or fit them with concrete shoes - because we need everyone to attend our most vital fundraiser of the year. Once again thanks to our exhibitors and industry members - they make our chapter all that it is with their generous financial support of the trade show.

Did you know we only have one professional who is a chapter sponsor? I'm preaching to the choir but it's time for others (architects / engineers / contractors / specification writers) to step up - our industry members have been carrying our chapter far too long. Come on kids -
professional members should be a vital part of our sustainability - so get off your wallets and contribute. It's not like you don't have enough work or cash flow right now.

Thanks to Ivette Bruns for her work on Membership. We are starting to see a momentum shift - Ken Schmidt has threatened to come to every architect's office in the state and force at least two people to join. So if you don't want Ken in your office then sign up fast! Thanks to Bill McGuire for keeping the books straight - or at least just a little crooked. Thanks to DJ Fryman for being our chapter "glue" - you can always find him in the kitchen at parties. Strategic planning - oh come all ye faithful - Randy Vogt needs you. We included a few photos of Jack Morgan receiving his fellowship - congrats El Capitan!

Speaking of Captain - I vaguely remember as a teenager staying up past my bed time on a school night watching Johnny Carson and Lee Marvin was his guest. Apparently Lee Marvin served in the Pacific in World War II and said he was shot in the arse on the beaches of Saipan in 1944. Marvin wasn't able to run and another guy on the beach picked him up under fire and carried him to safety. That man was Bob Keeshan - the future Kaptain Kangeroo. I did some research on Wikipedia - the most reliable source of information ever - and apparently Bob Keeshan received the Navy Cross and Purple Heart and is buried at Arlington National Cemetery. So maybe I didn't dream this after all - can anyone verify or refute this account?

Football is back, Hockey is back, NBA pre-season started last week - life is good. Notre Dame has a shot at the playoffs - thank you touchdown Jesus. It won't be long and college basketball will be back - can't wait to see IU with Romeo - I hear Pete "The Microwave" Baker will be coming off the bench for instant offense. The Blackhawks won their first two games in OT - Kane and Toews each got a winning goal. We need to get Corey Crawford back in net. And Da Bears are back with the Khalil Mack Attack! Monsters of the Midway. Lord help our Colts - are there any other new and creative ways they can find to lose?

- Your Humble Narrator
The Indianapolis CSI Chapter wants **YOU** to attend the CSI Chapter Meeting on October 18th from 5:30 - 8:30 pm!

**Penrose on Mass**

The Mass Ave. cultural district in downtown Indianapolis continues to grow rapidly and thrive. To continue the excitement in the eclectic neighborhood, Penrose on Mass was planned to provide retail space and apartments to compliment the community. Schmidt Associates designed the space to have a modern feel while being sympathetic to the historic neighborhood; all while contributing to the neighborhood's economy. With 40,000 sq. ft. of retail space and 235 apartment units, Penrose on Mass delivers on the neighborhood's needs for a growing economy.

**About the Presenters:**

Steve Schaecher, AIA LEED AP, CDT
Associate, Senior Project Architect, and Architectural Quality Manager

Growing up in Columbus, Indiana, Steve developed a love for architecture by constructing some of the great buildings of his hometown- in Lego block. Today, as Senior Project Architect and Architectural Quality Manager he’s responsible for creating real, amazing spaces for client/project owners at Schmidt Associates. Steve understands that creativity coexists with consensus and compliance, because creativity is just the beginning of a lot of hard work. Enjoying the creative aspects of architecture and working with others to get all the pieces to work together, he ensures that only the best design earns the ultimate approval of each Schmidt Associates client.

**Location:**
Willows on Westfield
6729 E Westfield Blvd.
Indianapolis, IN 46220

TABLETOPS

The Indianapolis Chapter of CSI is accepting reservations for Table Tops for upcoming Chapter meetings. The list of programs for upcoming Chapter meetings is published in this newsletter, the web site, or contact Program chairman Jack Morgan - morwalsopladi@gmail.com, if you would like to target a particular meeting, be sure to make your reservation early. We do have a limit of four spaces available for Table Tops in a standard meeting room and 10 if we have a double room.

Table Tops are an opportunity to promote your company, products, or services to all attendees of our regular chapter meeting during the social hour. There is a maximum of 20 minutes for Table Top presentation at a regular Chapter meeting. You have the floor for maximum of five minutes after dinner before the speaker to communicate to the entire group if there are four presenters. If there is a greater demand, the 20 minutes will be divided by the number of presenters and rounded down to the nearest 30 seconds.

The Table Top presentations are FREE, one time, to new members, and cost current Indianapolis Chapter members only $75. Non-members get the same opportunity for $125. A 30 by 60 table with a cover and skit will be included. All proceeds go to support the Chapter. Payment is due at the time of setup.

Another opportunity for a Table Top is during an Education Seminar. The cost is if you combine it with the Chapter meeting and Education Seminar the cost would be $100 for current members and $150 for non-members.

If you would like to schedule a Table Top for a future meeting or seminar, contact:

Kent A. Hughes RA CDT - American Structurepoint
khughes@structurepoint.com - 317.690.5820

Be sure to put "Table Top Request in the subject line

CSI INDY FUEL OUTING
It is officially Fall! Hard to believe. It's also the quarter pole of my Presidency, and for myself, that's just as hard to believe. Many past Presidents told me it would fly by and wow were they right!

As a Chapter we've just completed one of our busiest months of the year. The 44th Annual CSI Indianapolis Trade Show has now come and gone. What a great show, it was very well attended, a full house of booths from the Industries finest manufacturers' representatives and material suppliers and our first ever Craft Beer Garden.

A very special thank you to Brian Detty and his Trade Show Committee. Without their efforts the Trade Show would be nonexistent. The Chapter and I would also like to thank you a true CSI Warrior, Mike Halstead for another outstanding year of filling the trade show floor with an outstanding collection of booths. There we're also many others who invested their time and resources to make our CSI's Trade Show one of the best in the Construction Industry.
Construct 2018 has also concluded. Unfortunately, I was not able to attend but our Chapter was very well represented. CSI Indianapolis Chapter was also the recipient of the Outstanding Chapter Commendation! Well done. I am very proud to announce our very own, Jack Morgan, was elevated to Fellow. Congratulations Jack, you are very deserving!

The October CSI-Indianapolis Chapter Meeting is about Penrose on Mass. The Mass Ave cultural district continues to grow and thrive, and this project will only continue this momentum for our city. Come and listen to our presenter, Steve Schaecher, guide us through this very exciting project.

Randy Vogt, CSI
President
Indianapolis Chapter of the Construction Specifications Institute, Inc.

NEW MEMBERS

Harry Sheridan, HC Systems

CSI INDY MEMBERSHIP ANNIVERSARIES

Every month we will acknowledge members of the CSI Indianapolis Chapter on their Membership Anniversary. For those that joined the CSI Indianapolis Chapter in the month of September, we recognize the following anniversaries:

Andrew C. Churchill - 33 years
Mark Walsh - 24 years
Gary T. Tilford - 16 years
Pete Kerfoot - 15 years
Arlen J. Packard - 8 years
Eric R. Spohn - 7 years
David J. Fryman - 5 years
Adam Boswell - 2 years
Amy Baker - 2 years
Gordon W. Keller - 2 years
Kathryn Gainey - 1 year
Alan Broderick - 1 year
Dorothy Neff - 1 year

So glad to have as a part of our Indianapolis Design/Construction Community!

WALKER PROFESSIONAL NEWS
THE NEVER-ENDING CHALLENGE OF JOBSITE SAFETY

For decades, a/e specialist advisors have instructed design professionals to eliminate the word “supervise” from the owner/prime design consultant agreement, and to make it clear that safety on the jobsite is the sole responsibility of the general contractor. The idea being that these instructions prevent anyone from making the argument that architects and engineers somehow share a duty to keep construction workers free from harm. This approach has served us well over the years, but times have changed. Personal injury attorneys have become more aggressive and design professionals are generally unaware of the legal traps jobsite observation has created for them.

The past solutions worked reasonably well. What has become a deluge of claims by the late 1970s was reduced to a trickle in the 80’s and 90’s. Adverse judgments were few and far between. But barriers to recovery notwithstanding, an undaunted plaintiffs’ bar has continued to press the argument that duties to injured workers are found in obligations to “monitor,” “oversee,” and “inspect.” Moreover, despite contractual language to the contrary, the actions of design professionals in the field contradict their responsibilities in the agreement. Fortunately, the efforts to have this language modified in the AIA contracts and owner/prime design consultant agreements have been very helpful in limiting the design professional’s duties in regard to job site safety.

But, when you plug one hole in a leaky roof, water always tries to find another path. The battle against the specter of responsibility for construction safety requires constant vigilance and a concerted effort.

SHOW ME THE MONEY

Disasters have a way of focusing public attention. The cable news and online media require “breaking news” reports every hour to keep the public’s attention. When a bridge collapses or a building fails, the public is notified in a heartbeat with live video feeds from cameras capturing everything in real time. The attention has brought aggressive
plaintiff’s attorneys to the scene, and they are prepared to bring in any party that has any role in the design and construction process if they can find an insurance policy or a solvent company. When attorneys look for big dollars for their client, the workers compensation exclusive remedy has often times limited injured workers’ legal options against their employers. That said, workers compensation may not cover all the medical costs and lost wages sustained by the worker or their estate. As well, attorney’s fees are also not fully covered in most states. The shortfall inspires attorneys to search for “deep pockets”, and to do so they must impose responsibility on a source other than the contractor’s employer. So why not the design professional?

Let’s take an example of a typical situation. You have an owner/prime design consultant agreement, which requires you to send a project architect or engineer to the site once a month to walk the job and observe the general progress of the work. While doing your rounds, there is an open trench, which has no shoring and is more than 5 feet deep. This failure to protect against the risk of injury or even death of the workers, should the trench collapse, clearly falls under the purview of the general contractor or the sub-contractor. Still, a design professional may even be accused of interfering with the contractor’s means and methods if they say something, so what does the project architect or engineer do in this situation?

Unfortunately, the answer may vary from state to state and county to county depending on how a judge or jury interprets design professionals’ responsibilities. We have often promoted the concept that where there is a situation that poses an imminent danger to the worker, the design professional has an obligation to warn the contractor. But, is this standard changing?

In a court decision on the east coast, a design professional was found to have no obligation to take affirmative steps to protect the worker in a trench collapse case, since it did not pose a risk of imminent harm. However, in the mid-west, under very similar circumstances, the court took a different approach and found because the engineering firm in question had prepared sewer construction requirements that referenced safety precautions for trench operations and also referenced OSHA standards regarding the use of shoring in the same specifications, the court found that the engineer was obligated to take affirmative steps to warn the contractor. Some of the more pertinent facts considered in that decision were that the engineer was on site on the day of the accident. Also, when on site, the engineer acknowledged seeing the trench, and it was decided that he knew it lacked proper shoring based on the depth of the trench and due to his understanding of OSHA standards. The engineer was asked why he did not say anything to the supervisor being that he was aware of the OSHA requirements referenced in the specifications. The engineer responded that he was not responsible for how the contractor does his work and it was not his job to do site safety.

Some courts are not inclined to allow design professionals to stand idly by on the jobsite with actual knowledge of unsafe practices. These courts see a problem with not acting to advise or warn the owner or contractor of the risks at hand. It appears that these courts are shifting their approach away from whether or not a design professional observes a situation involving imminent harm. Rather, they are focusing on the actual knowledge of the design professional and whether they took some kind of affirmative action to advise or warn.

The standard is eroded further at the initial pleading stage of a case where design professionals have had to defend themselves against trumped up allegations of culpability regardless of whether jobsite safety falls within their scope of services.

Recently, a worker was electrocuted when performing his work on the roof of a building. The project had involved new construction in a commercial retail area adjacent to power poles. It is important to note that OSHA had sent notification to the contractor saying that no one was allowed to work in the area of the roof, specifically due to the proximity of the power lines, until the power lines were moved. The general contractor was responsible for relocating the power lines and for jobsite safety. All of this considered, the court allowed the injured worker to add an architect as a party in that case after a year of litigation.

The architect was not relocating the power lines, nor was the architect responsible for jobsite safety. Notwithstanding these details, the court allowed the addition of the new party, because the architect had shown the relocation of the poles on their drawings. The court saw some value in the obscure connection to the power lines that
LESSONS LEARNED

As a general matter, given that we bear full professional liability for the mechanical, electrical, and plumbing portion of our projects, it is important-essential really-for us to know about any changes that may occur during construction, whether such changes come from trade contractors, the general contractor, a construction manager, the architect, the Owner, or anyone else. This doesn’t mean that we’ll stand in the way of changes; we just have to know to maintain compliance with State law. We also need to know key construction dates: start, milestones, and finish. And we need to see structural models when working in Revit as early as feasible.

Mechanical
M1.0 As early in design as feasible, verify the extent and location of ALL fire-rated assemblies (this may be applicable to Electrical and Plumbing also).

Electrical
E1.0 When "large equipment" rules may apply, verify that the equipment in question contains 1,200 a. or larger devices AND that the equipment is more than 6'-0" wide. (These rules are often misunderstood by local officials.)

Plumbing
P1.0 Using only fully concealed sprinklers in sensitive historic spaces, noting the limitations of finish options.

Very truly yours,
THE ENGINEERING COLLABORATIVE

Samuel L. Hurt, P.E., R.A., R.I.D. John T. Lowe, CxA
LC, LEED AP, HFDP Principal
Principal

CERTIFICATION QUIZ

Jack P. Morgan
Indianapolis Chapter Quizmaster

1. It is important for the long-term success of the facility's operations and maintenance that project closeout activities include all of the following EXCEPT?
   a. Start-up and load testing  
   b. Receipt of final punch list  
   c. Demonstration for new operators  
   d. Operational training if necessary  
   e. Commissioning

2. Under AIA A201, who has the responsibility to pay sales, consumer, use, and similar taxes for the Work provided?
   a. A/E  
   b. Owner  
   c. Contractor  
   d. Installing sub-contractor  
   e. None of the above

3. Substitution requirements and procedures during bidding:
   a. Are not allowed under most public bidding statutes  
   b. Are modified by the Supplementary Conditions  
   c. Are governed by the Instruction To Bidders  
   d. Provide for requests by telephone

4. Marked up or corrected Contract Drawings that indicate changes incorporated in the Work, are known as:
   a. Contract Forms  
   b. Closeout Submittals  
   c. Record Drawings  
   d. As-Builts  
   e. Not required for private work

5. All of the following are Articles in PART 3 - EXECUTION except:
   a. Examination  
   b. Application
6. How long did it take to build the Cologne Cathedral - the largest Gothic cathedral in northern Europe?
