

CSTA Pittsburgh

Member Spotlight

ERIN WHITAKER

Educational Innovation Specialist, Fluxspace

Erin has over 13 years of experience teaching computer science, STEM, & robotics in the classroom. She is now part of the Fluxspace team whose mission is to revolutionize learning environments and help educators understand the innovative programs, products, experiences, and mindset that should take place in the classroom. Erin hosts events at Fluxspace Pittsburgh for educators to learn more about new STEM & CS products that can enhance student learning from the youngest learners in elementary school learning introductory concepts through screen free coding, to middle school students learning to build their own robots with sensors, motors, and lights, to high schoolers learning how AI works and building their own machine learning models.

Please reach out to Erin if you would like to schedule a visit to Fluxspace to check out some new CS experiences or if you just want to pick her brain on some projects, activities, or lesson ideas with the resources you already have!
