

MIOX[®] Hypochlorite Generator

Special Offer

Uses food grade salt and electricity to make bleach
Make it as you need it, where you need it
Completely automated - easy to operate
Protect against supply shortages

MIOX®

Compact Hypochlorite Generator

The MIOX® 2 On-site Hypochlorite Generator generates bleach where you need and when you need it. Compact and portable, it uses only salt, electricity, and water to generate a chlorine based bleach solution. Similar in operation to larger ClorTec and MIOX systems used throughout the world, this small-scale generator is perfect for small communities, hotels, school districts, senior care facilities and other locations.

The MIOX® 2 system is being offered as a special price for a limited time to help communities and institutions alleviate shortages of bleach supplies.

The system scope of supply includes:

- MIOX® 2 Generator
 - 110/220V compatible power supply
- Integrated brine tank
- Bleach storage tank with level controls
- Initial fill of salt, approximately 60 days work if used constantly

The De Nora MIOX® 2 will:

Stabilize your bleach supply.

- A MIOX 2 unit will produce 60 gallons (228 liters) of 4,500 ppm (0.45%) bleach (hypochlorite) each day.
- A load of salt (about 350 lbs or 160kg) will last more than 50 days.

Reduce your exposure.

- Making bleach on-site will reduce trips to supply stores.

Enable mobility.

- Approximately the same size as a home water softener, the MIOX 2 system is small enough to be placed anywhere.

De Nora has a full suite of chlorination products to suit any need. [Contact us](#) for larger systems or other options
