

About the Speaker

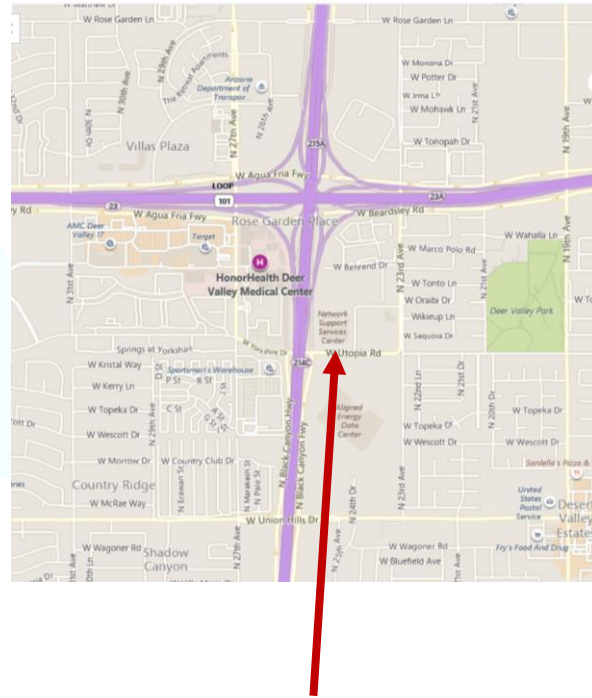

Michael Heuinckx

MSN, APRN, NP-C, CEN, CPEN, TCRN

Michael Heuinckx is Solheim Enterprises newest addition to our fantastic team of instructors. Michael Heuinckx brings a 5 year background as an Emergency Department Registered Nurse, with the most recent 2 ½ of them being completed at a Level 1 Adult/Level 2 Pediatric Trauma center. With continuing education being a priority within his career, Michael has also completed a Masters of Science in Nursing degree, and currently works as a Nurse Practitioner in the Surgical Intensive Care Unit within the same ACS Trauma verified institution.

Michael is not only passionate about his own education, but that of his fellow nurses and the community. Michael has authored the book, Code Blue! Now What? Learn What To Do When Your Patient Needs You The Most!, focusing on easing the fears of newly graduated nurses on what to do before, during and after a Code Blue or other medical emergency.

Michael is also active in serving the medical needs of his local community through volunteering on the Medical Team at his local church and at the FernCare Clinic that offers free medical services to those who do not have health insurance. Michael has a special interest in the care of the Trauma patient and plans on continuing his education to one day complete a Doctor of Nursing Practice degree and focusing on Trauma care. Ensuring that Evidence Based Practice is occurring at the bedside and within continuing nursing education.

Interactive Trauma: Beyond the Moment of Impact

Phoenix, AZ

February 21, 2019

0800-1700

This day-long seminar starts with a dispatch call of this scenario occurring and from this point forward, participants are invited to literally guide this patient from his initial treatment at the scene through the first 24 hours of his care in the emergency department, operative suites and intensive care unit. How much fluid should the patient receive in the first hour? What laboratory and radiological exams should be ordered? What ventilator settings would be appropriate? These, as well as numerous other decisions, are driven by participants who vote anonymously using their smart phones. The results of the votes are immediately displayed on the screen and the case study moves forward based on the majority vote. Ultimately, the outcome of the patient relies on the decisions of the audience. Participants will learn in real time how the care-decisions they make influence the trauma patient.
