Subject: Re: Problem when I configurated WebApplication - Community Forum SAG

Hi. Tanya. Thanks for your help.

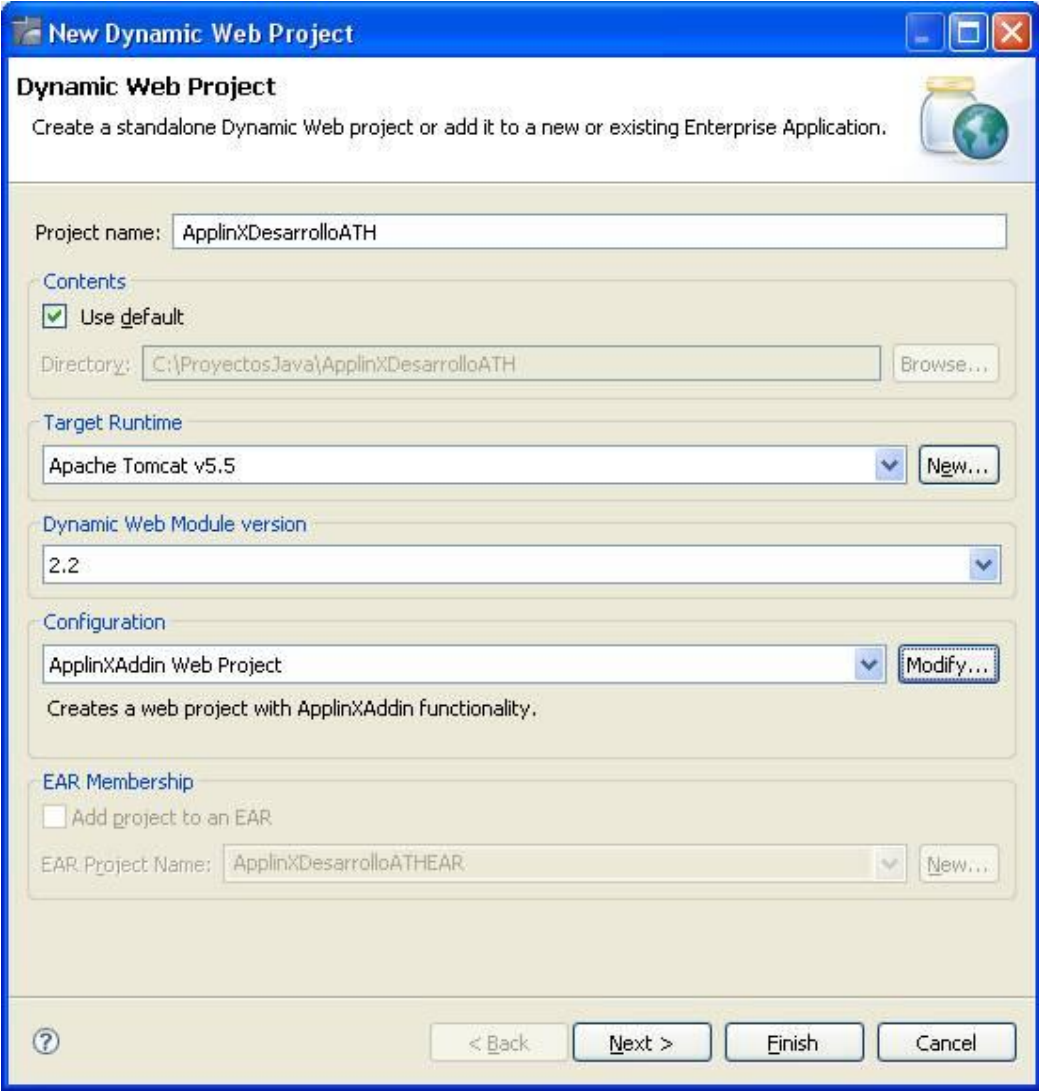

I have a problem with Web Enablement. I can't configuration it.

I followed the PDF attach "Creating an ApplinX Web Application using the Software AG Designer based on Eclipse (recommended)". But I don't see any screen.

I installed "Designer" in Windows XP and ApplinXServer on RedHat Linux Enterprise 5.2. The version ApplinX is 8.1.1

My steps were:

Click File/New Project/Dynamic Web Project. I completed this information...

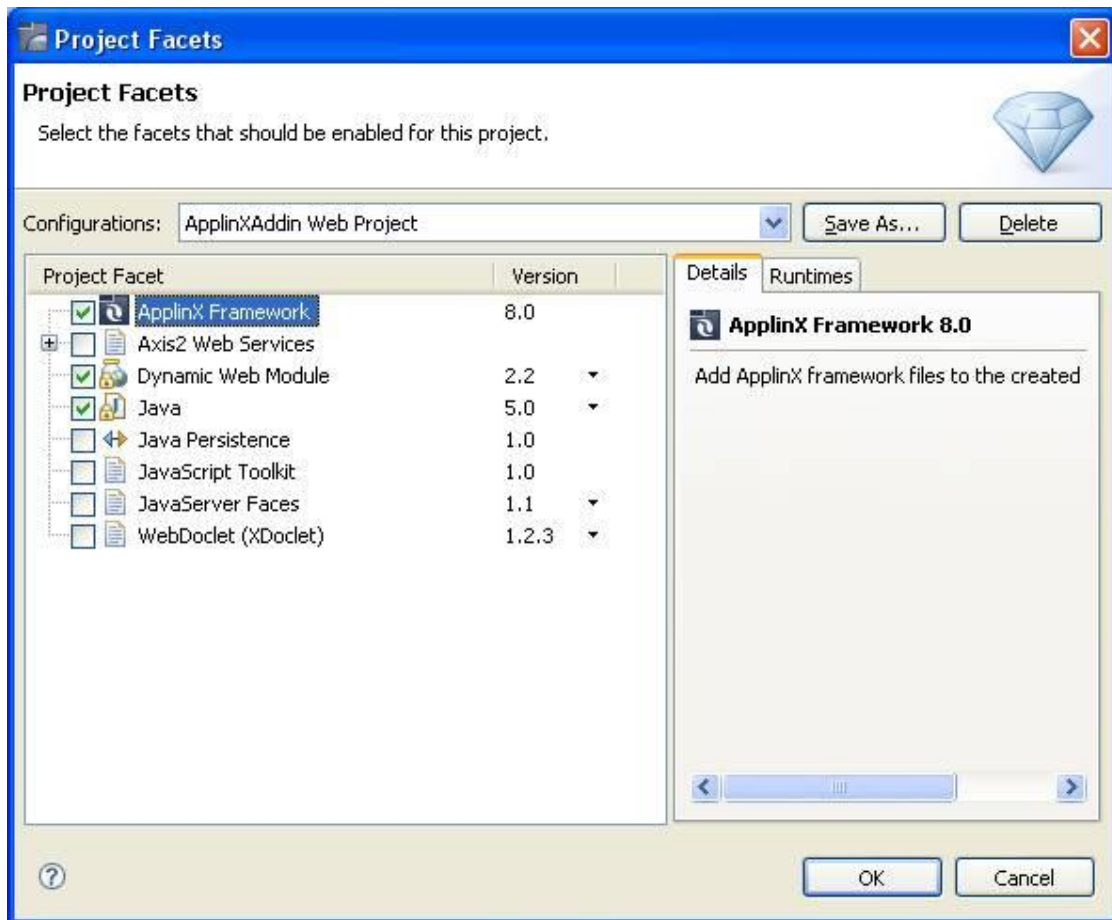

The screenshot shows the 'New Dynamic Web Project' dialog box in the Eclipse IDE. The dialog has a blue title bar and a light beige background. It contains several sections for configuring a new web project:

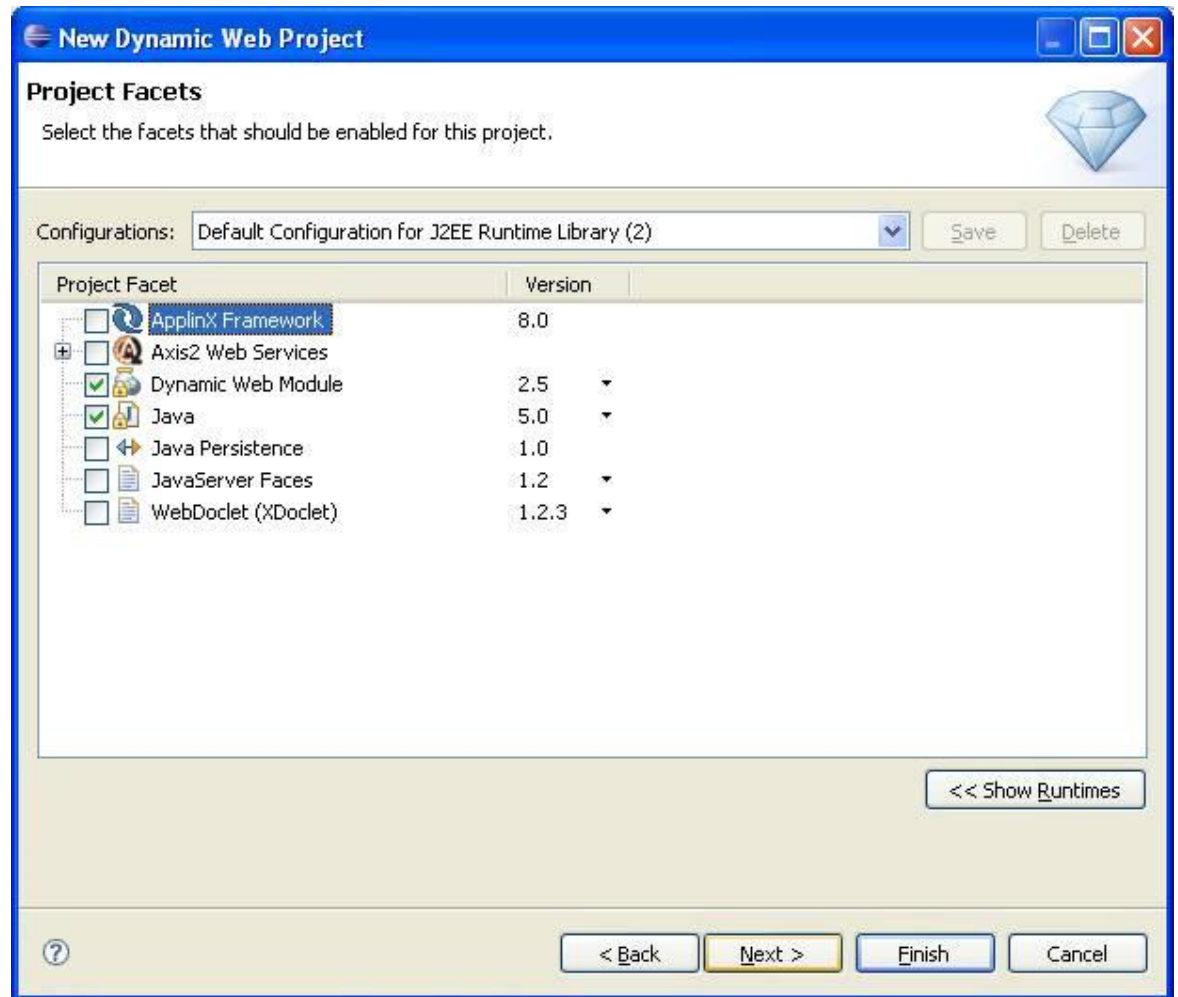

- Project name:** A text field containing 'ApplinXDesarrolloATH'.
- Contents:** A section with a checked 'Use default' checkbox. Below it is a 'Directory:' text field with the path 'C:\ProyectosJava\ApplinXDesarrolloATH' and a 'Browse...' button.
- Target Runtime:** A dropdown menu showing 'Apache Tomcat v5.5' and a 'New...' button.
- Dynamic Web Module version:** A dropdown menu showing '2.2'.
- Configuration:** A dropdown menu showing 'ApplinXAddin Web Project' and a 'Modify...' button. Below this is a note: 'Creates a web project with ApplinXAddin functionality.'
- EAR Membership:** A section with an unchecked 'Add project to an EAR' checkbox. Below it is an 'EAR Project Name:' text field with the value 'ApplinXDesarrolloATHEAR' and a 'New...' button.

At the bottom of the dialog, there is a row of buttons: a help icon (?), '< Back', 'Next >', 'Finish', and 'Cancel'.

Click in Configuration “Modify” and I see the next screen. This screen doesn’t have button “Next”

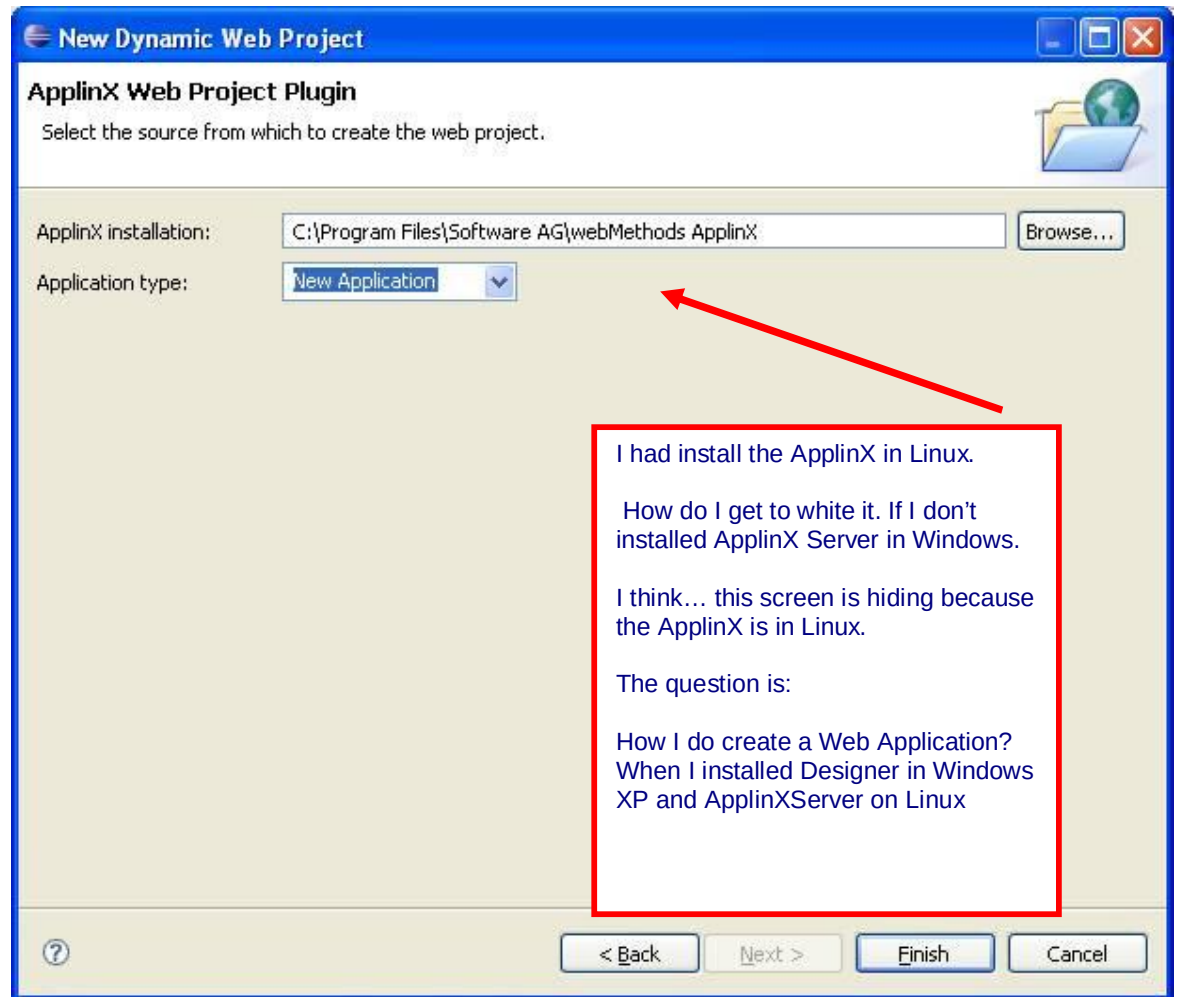

But if you see the PDF attach... The screen has these bottoms.

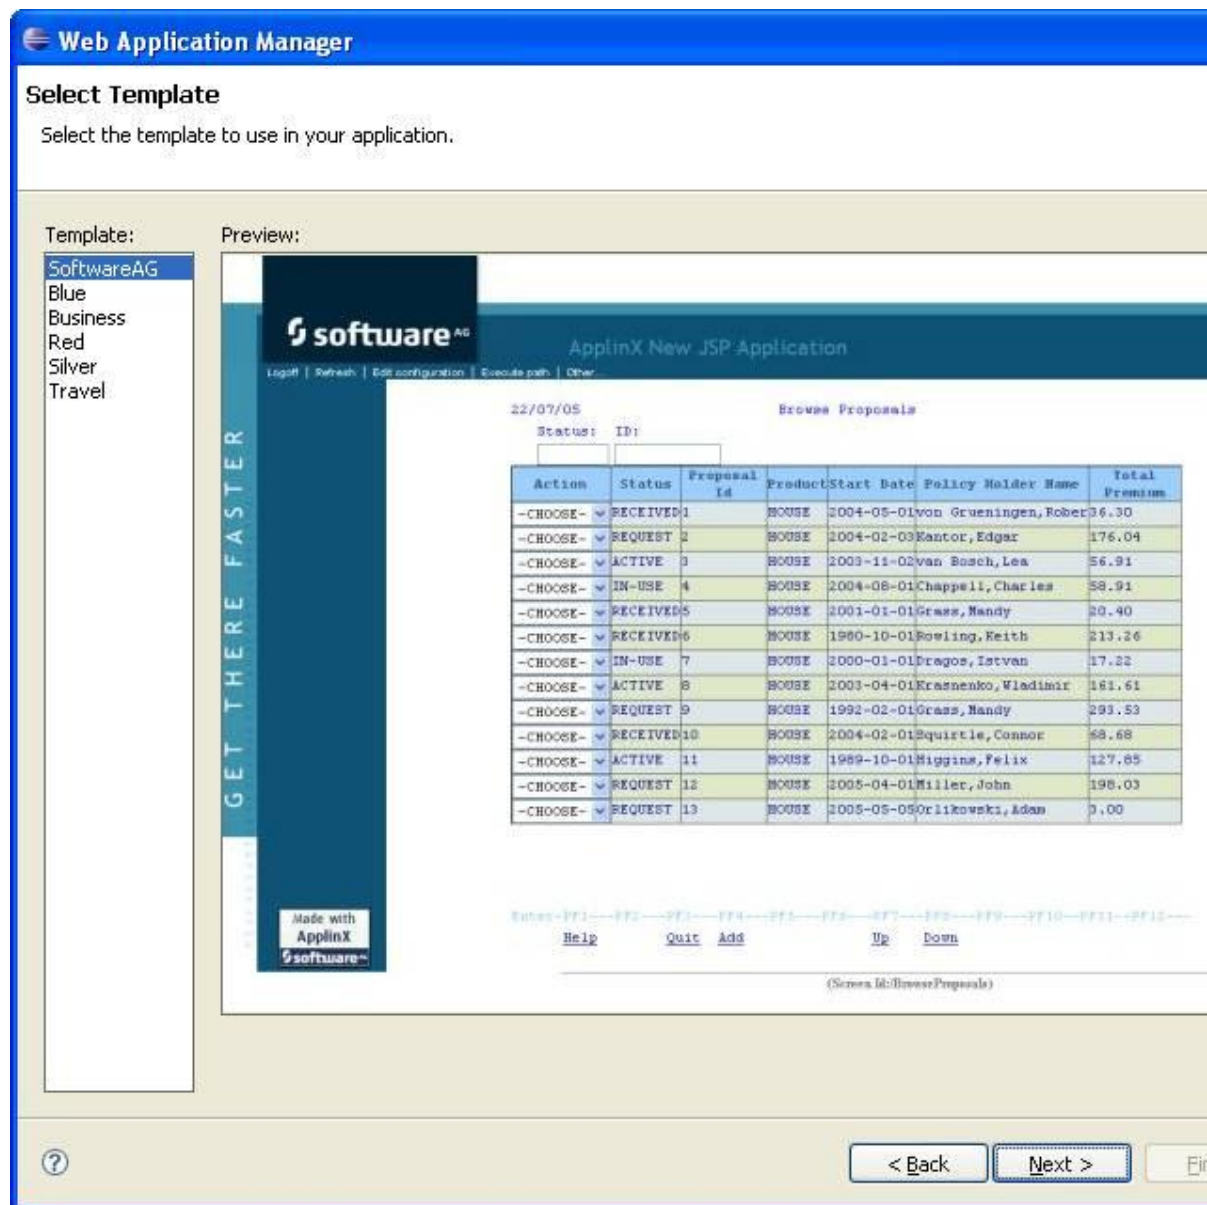

1.

I don't see the next screens:

1. Click **Next**.
2. Click **Next**.
3. Select Applinx installation from which to create the Web project and select the application type.

4. Click **Next**. *Select Template* screen is displayed.

Select the template to use in your application.

5. Click **Finish**.

Thanks
