

- The incoming wave of new employees are learning analytics using open source tools and expects their employers to do the same. How will companies make the transition to open source without abandoning their investments? What risks do companies face in transitioning too slow or fast?

IoT

- The industrial internet has the power to dramatically alter the competitive landscape of industries. How are companies meeting the challenge of turning the huge amounts of data into action by your organizations? What obstacles and issues are you facing and how do you overcome them?
- To get the most value out of the industrial internet/big data, there will be a push to provide predictive analytics and prescriptive solutions towards real time and a broad spectrum of users. What obstacles/issues do you see and how do you overcome them?
- How do solution techniques and models change when (sub) second response is required?
