DESIGNING UNIT TRAIN SERVICE FOR FREIGHT RAILROAD ASSET AND CAPACITY PLANNING

Andy Yoon, Clark Cheng
Norfolk Southern Corporation

TABLE OF CONTENTS

- 01** What is Unit Train?
- 02** Unit Train Generator Overview
- 03** Use Case
- 04** Summary and Future Plan

01

WHAT IS UNIT TRAIN?

WHAT IS UNIT TRAIN?

- Known as bulk train or block train as well
- A train dedicated to move one commodity from origin directly to destination
- No assembling or disassembling trains
- Coal, grain, crude oil, ethanol, etc.
- No train schedule

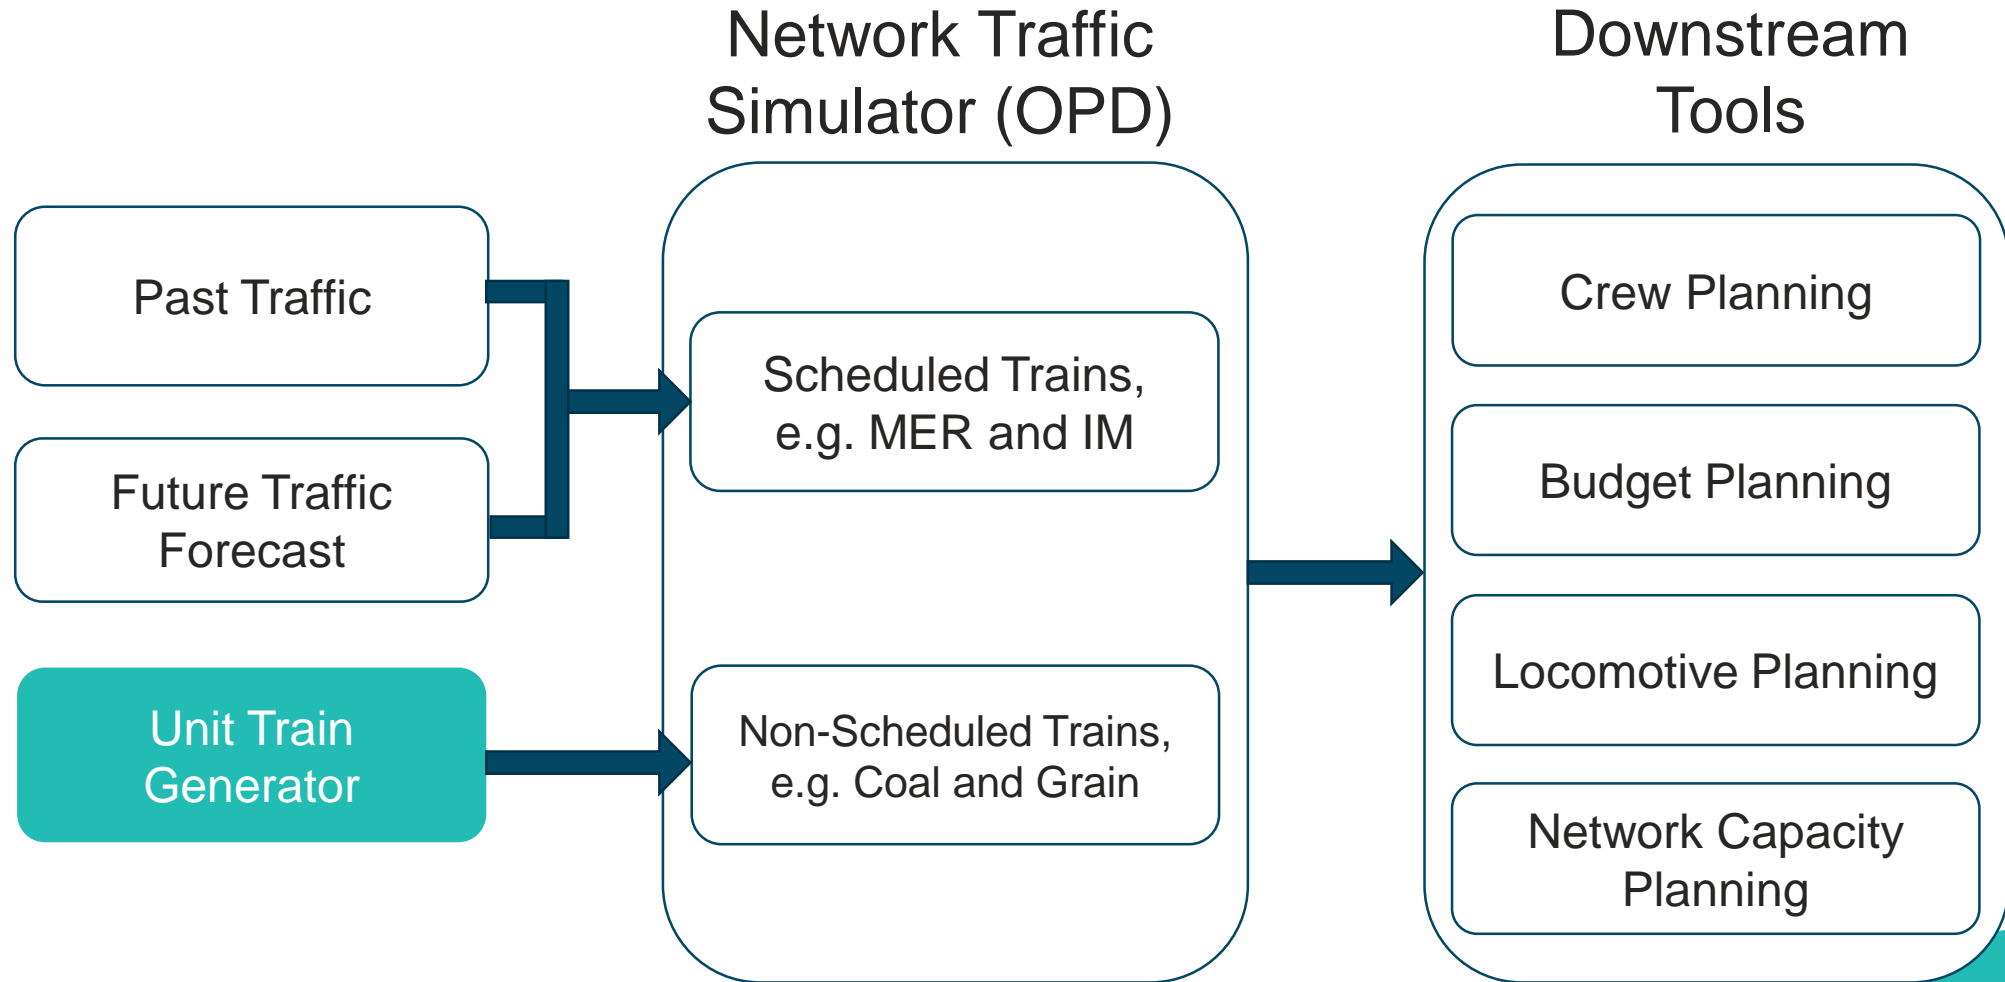

WHY ARE UNIT TRAINS SPECIAL?

- Network Capacity team provides crew planning and budget planning based on future traffic forecast.
- A holistic train file is required to run network traffic simulation using Operating Plan Developer (OPD).
- Manual addition of unit trains to the train file is not a viable alternative.
- Therefore, we need a tool to create unit trains and their schedule.

DATA FLOW DIAGRAM

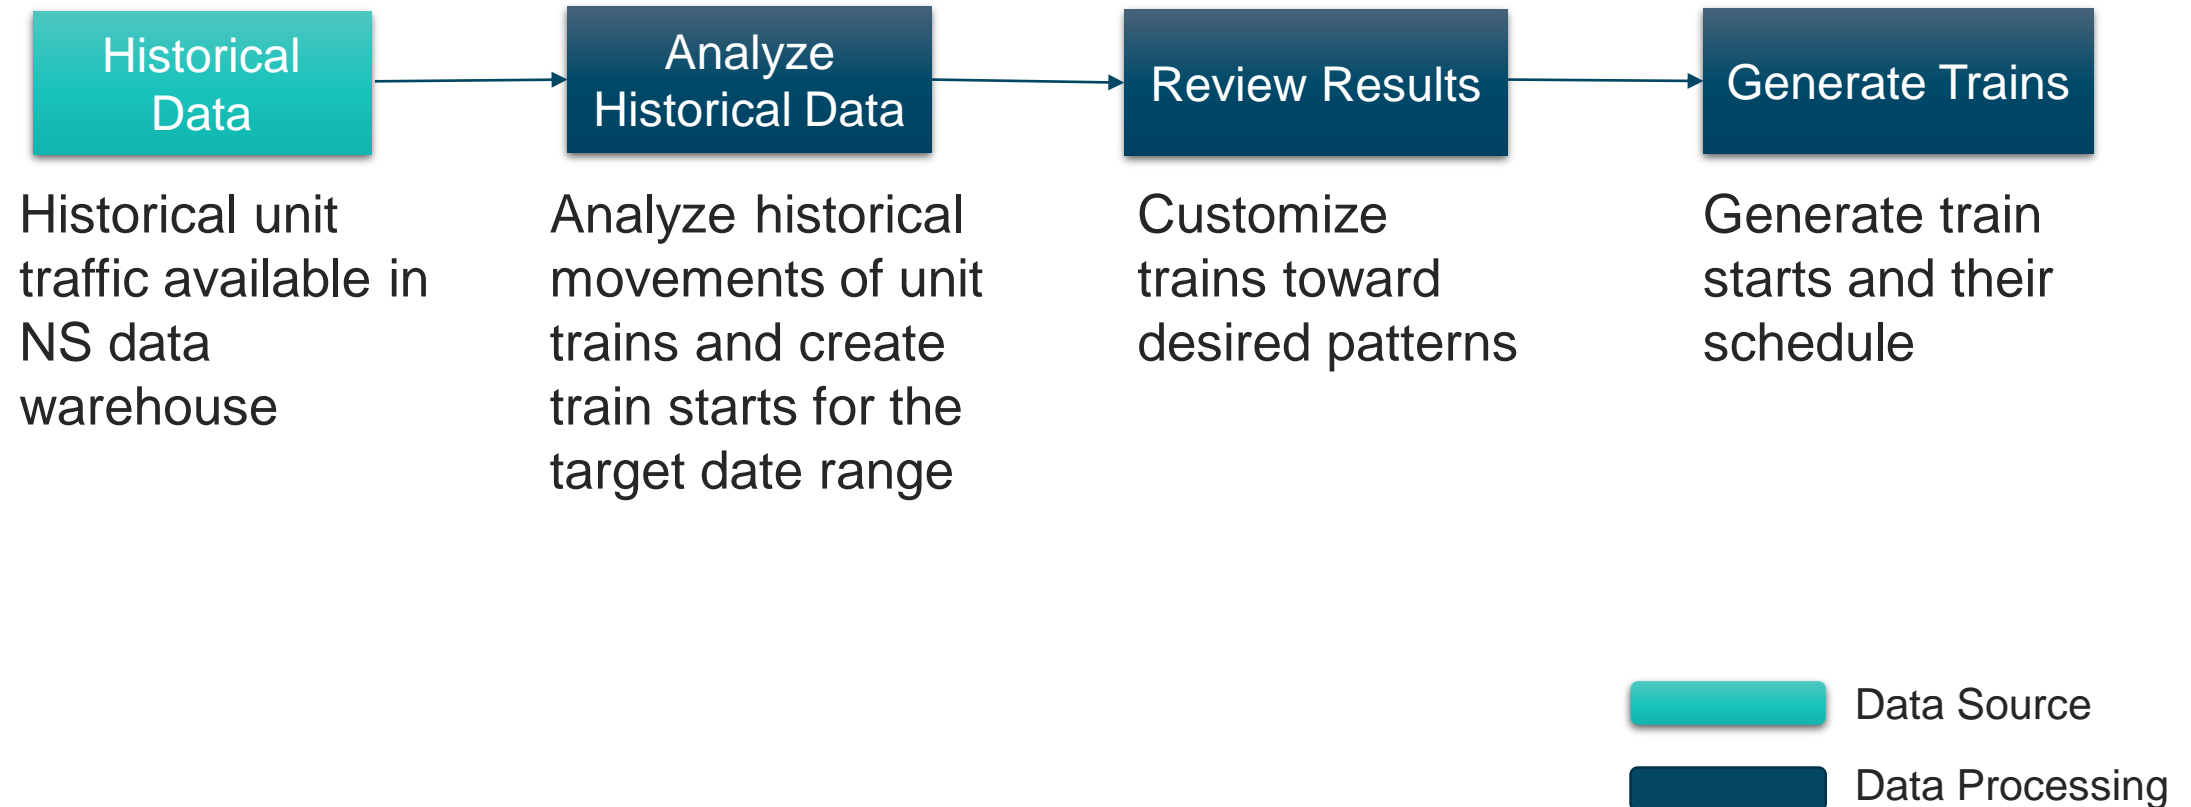

02

UNIT TRAIN GENERATOR OVERVIEW

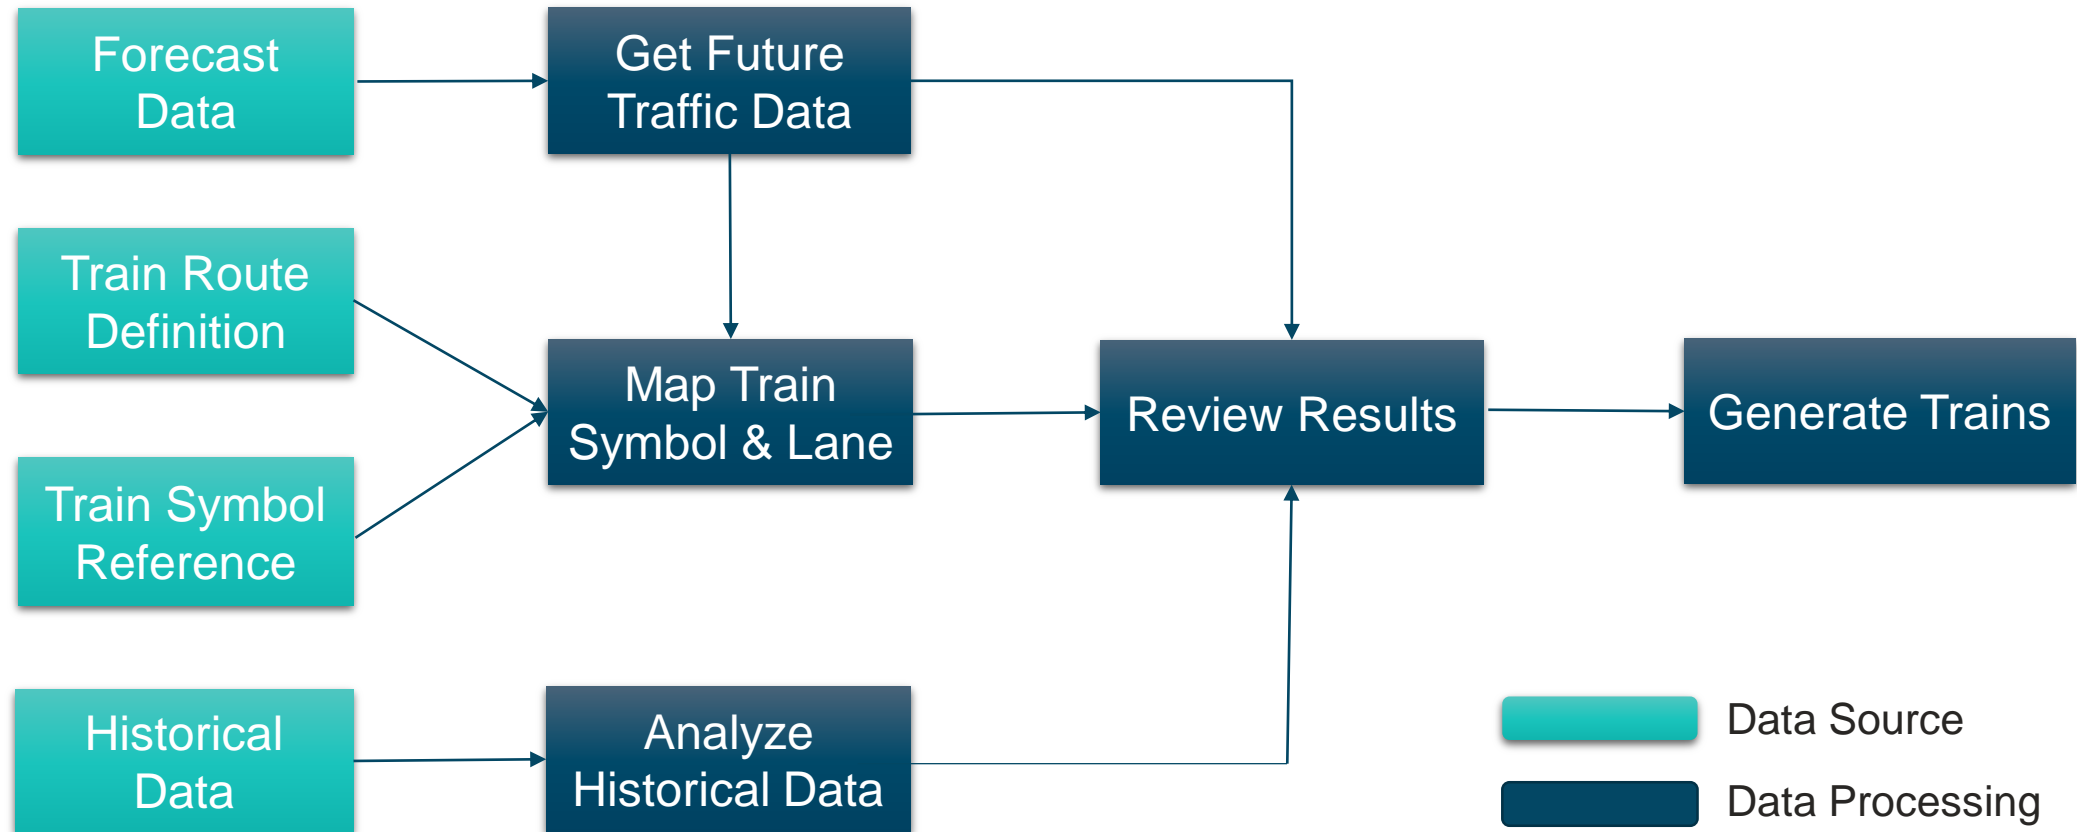

UNIT TRAIN GENERATOR

- Goal: Generate unit trains and their schedule
- Benefits
 - Automate the process and avoid manual data entry via spreadsheets
 - Create a holistic train file quickly
 - Shorten the turnaround time of future strategic studies
 - Upload the train Information into Operating Plan Developer
- Two models
 - Phase 1: Model based on past traffic
 - Phase 2: Model based on future traffic forecast

PHASE 1: PAST TRAFFIC MODEL

PHASE 2: FUTURE TRAFFIC MODEL

PHASE 2: FUTURE TRAFFIC MODEL

Get Future
Traffic Data

Download lane level data of traffic forecast

Map Train
Symbol & Lane

Find a train symbol based on traffic lane from train route definition or train symbol reference

Analyze
Historical Data

Process data for day of week and max train size obtained from historical movements

Review Results

Review train symbol mapping, train size and train routes

Generate Trains

Generate train starts for the mapped train symbol and associated forecast volume into Operating Plan Developer

03

USE CASE

USE CASE

1. Let's assume NS plans for a new business
2. It requires trains to serve this customer from an NS serving yard
3. Search trains which can serve this customer and find the closest train symbol
4. Calculate data statistic, e.g. day of week, train size, etc., using historical data for the train symbol found at Step 3
5. Get forecast volume for the customer
6. The model provides appropriate train start dates, train route, and train size based on the statistic and the volume.

04

SUMMARY AND FUTURE PLAN

SUMMARY AND FUTURE PLAN

- Unit Train Generator is a tool to generate unit trains based on traffic and create a holistic train file.
- It helps Network Capacity team provide crew planning and budget planning based on future traffic forecast quickly.
- The past traffic model (Phase 1) was complete and in use.
- The future traffic model (Phase 2) is currently under development.

A wide-angle photograph of a large freight train yard. Numerous tracks run parallel, filled with various types of railcars, including long trains of cylindrical tank cars and flatcars. The yard is situated in an urban or industrial area, with buildings and structures visible in the background. The sky is filled with large, dramatic clouds. The overall image has a dark, moody aesthetic with a blue color grade.

THANK YOU
