Crumb Rubber Asphalt

Performance Made Affordable For Council Roads

Crumb rubber has long been the territory of state road authorities but a new specification allows an affordable version for the low traffic roads managed by councils.

Traditional rubber asphalt in Australia has a high bitumen content making it more expensive than standard mixes & pushing rubber out of reach as a sustainable material.

A new mix uses a smaller amount of rubber but still aims to deliver better performance than other mixes used on low traffic roads. Reducing the rubber in the mix means more rubber can be used on more roads to deliver a bigger net sustainable benefit to the community.

Don't miss this innovative & sustainable product update!

pitchinar (n.): a forum for new ideas.

The IPWEA Victoria's Pitchinars enable public works sector service providers and product suppliers to pitch directly to influencers and decision-makers around the state.

Presenters:

Arthur Apostolopoulos

Manager Pavement Technology; DoTransport

Brett Martini

Manager Works; City of Greater Bendigo

Erik Denneman

Global Technical Manager; Puma Energy

Ryan Jansz

National Technical Manager; Boral Asphalt

Free Event (byo coffee)

10:15am > 11:00am

Wednesday 20 October 2021
