Wednesday 11 November 2020

### Lightweight GIS for the next generation!

**Presenter:** **Dr Jonathan Stanger** Head Solution Architect  
**Spatial Partners**

We are seeing spatial data being used in more business activities than ever before – even though many businesses don't have GIS technology or specialists. Historical barriers to entry are cost, complexity and specialist knowledge. Open source projects and web 2.0 has quietly been driving a revolution in lower cost, accessible GIS technology.

Now, even organisations without a GIS specialist can benefit from spatial technology in the office and the field. We'll discuss a range of successful projects including construction and tree maintenance, all centred around the GIS Cloud platform, showcasing what can be done with lightweight GIS done right.

**10:30am > 11:00am | Wednesday 11 November**

***pitchinar** (n.): a forum for new ideas.*

*The **Pitchinar Program** enables service providers and suppliers to the public works sector to launch new products and present them directly to market.*

**Free Member Event** (byo coffee)
