Audit | IT, Data & Analytics Junior Professionals

Περιγραφή Θέσης

Deloitte Audit | IT, Data & Analytics offers a wide array of services designed to understand business and technology risks, determine the impact, digitize controls and instill an agile continuous risk monitoring culture, that enables the organizations to achieve regulatory compliance and operational excellence.

Our Technology Risk Professionals are Deloitte's culture and service offerings ambassadors. At the service's core is having direct interaction with clients, focusing on client engagement, understanding key client needs and objectives and delivering added value services.

During your tenure as a **Business Analyst/ Consultant** in IT Audit, you will demonstrate and develop the ability to:

- Be part of a high performing team, coaching and supporting resources to deliver exceptional services to the clients
- Advise clients on the design and implementation of the end-to-end Technology and Data risk management operating model to:
 - enable alignment with the strategic objectives,
 - ensure compliance with regulatory requirements,
 - support risk-based decision making and response,
 - facilitate continuous improvement and monitoring against regulatory requirements and best practices
- Proactively address the risks
- Apply problem solving and critical thinking to enable the identification of Technology and Data
- Risk associated with the Business Processes
- Assess the technology risk associated with the IT environment that support the core business processes and IT Applications
- Assess the effectiveness of the system of internal control against best practices and industry standards
- Evaluate the control deficiencies and assess the business, technology, and compliance impact
- Design and roll out the business and IT frameworks including policies & procedures, Governance and Control Operating models, processes and controls
- Manage the end-to-end project lifecycle from Planning to successful delivery and operationalization
- Forge strong relations with the clients, adopt a customer centric approach
- Address client business challenges in the intersection of process and technology
- Produce a high-quality work product and collaborate with others to deliver a superior client experience
- Deliver key messages with clarity and confidence
- Organize insights and define a logical flow to tell a story when presenting recommendations
- Select appropriate methods for collecting and analyzing data, and develop informed recommendations that shape or support the client's business strategy
