

## AI and the Intelligent Enterprise: Leveraging Artificial Intelligence for Growth and Efficiency

We are excited to share with you the latest innovation in Microsoft 365: Copilot. Copilot is a new way to work with AI-powered assistance that uses large language models and your data to help you create, edit, and communicate in Microsoft 365 apps. You can use natural language prompts to get suggestions, summaries, and more. Copilot works alongside you to unleash your creativity and productivity.

As IT professionals, you know the importance of digital trust in today's modern enterprise. You also face the challenges of cybersecurity, privacy, risk, and governance. That's why Microsoft designed Copilot to be secure, compliant, and transparent. Copilot respects your data sovereignty and privacy preferences. It also provides you with audit trails and accountability mechanisms. You can trust Copilot to help you achieve your goals while protecting your data and reputation.
