**For most companies, the ability to create and share data far exceeds the capacity to protect it. SaaS and IaaS apps evolve so quickly that it can be difficult to know when sensitive data becomes vulnerable, and security teams often don't have domain expertise for every cloud app their organisation deploys. According to Gartner®, over 99% of cloud breaches by 2025 will be preventable and caused by misconfigurations and end-user mistakes. By considering the sensitivity of data, who has permission to access it, and the activity around that data, we can incorporate automation to reliably identify risky configurations and limit data access to only those who need it. Join us to discover how automation not only protects our data and reputation, but saves time and resources while providing real-time visibility, blast radius reduction, proactive threat detection and response, and simplified compliance.**
