About the training

ISACA Malaysia Chapter is organizing an intensive training program to prepare you for the CISM certification examination. Accredited trainers will exclusively focus on the essential domain areas covered by the examination and will use only training materials approved by ISACA Global. All trainers have valuable working experience with technical skills and knowledge to complement their training delivery.

ISACA's Certified Information Security Manager (CISM) certification brings credibility to your team and ensures alignment between your organization's information security program and broader goals and objectives. CISM can validate your team's commitment to compliance, security, and integrity and increase customer retention.

Who should attend

The Certified Information Security Manager (CISM) certification is intended for individuals with technical expertise and experience in IS/IT security and control who aspire to transition from a team player to a manager. Obtaining a CISM certification can enhance your credibility and confidence when interacting with internal and external stakeholders, peers, and regulators.

What you'll learn

This course covers all four domains of the CISM certification. You will gain in-depth knowledge about each domain, providing you with the skills necessary to develop and manage a robust information security program.

Domain 1: Information security governance

Learn how to establish and maintain a framework that aligns information security strategies with business objectives and applicable laws and regulations.

Domain 2: Risk Management

Identify and manage information security risks to achieve business objectives.

Domain 3: Information security program development and management

Learn to develop and maintain an information security program that identifies, manages and protects the organization's assets while aligning to information security strategy and business goals.

Domain 4: Information Security Incident Management

Plan, establish and manage the capability to detect, investigate, respond to and recover from information security incidents to minimize business impact.
