

## CGEIT Certification Course Description

Information Technology has become a crucial enabler in the support, sustainability, and growth of enterprises. Given this pervasive role of IT, a specific focus on enterprise governance of IT (EGIT) has arisen in these often turbulent and always dynamic times, as an integral part of corporate governance.

Successful enterprises now accept that it is critical to align IT projects, assets, and processes with their business strategies and business goals. As a key component of overall enterprise governance, IT governance has emerged as a mission-critical issue for small and large business enterprises worldwide.

A CGEIT certification will enable you to be recognized for your abilities to grasp the complex subject of governance of technical competences, IT infrastructures and business processes, understand and relate with executive management to align IT with furthering enterprise goals and objectives.
