

FROM EVIDENCE TO ACTION: STRENGTHENING FAUNA-SENSITIVE ROAD DESIGN IN AUSTRALIA

Bridging research, policy, and practice

Birds and Roads: What We Know

Roads fragment habitats and disrupt behaviour.

Most studies are short, weak, and northern-biased.

We need stronger, long-term evidence.

Policy Gaps in Road Ecology

Transport planning rarely considers fauna movement.

Barriers: politics, priorities, misinterpretation.

Decision tools exist but go unused.

Where Australia Stands

FSRD is barely acknowledged in transport research.

Biodiversity framed vaguely, fauna movement ignored.

We lag behind global best practice.
