**Complete QP
Solution**

AMPP QP programs work better together.

The AMPP QP accreditation programs work together to ensure your projects are completed with the highest level of quality. The QP 5 accreditation complements QP 1, QP 2, and QP 3 programs to provide comprehensive coverage for your assets.

Quality Procedures for Owners and Contractors.

When you specify QP, you specify quality. The AMPP QP advisory committee uses consensus methods to set and review standards that QP contractors follow. When you specify QP accreditations for your project, you work with companies that have demonstrated a commitment to quality through proven processes, procedures, and skilled personnel.

AMPP QP Programs

- QP 1 – Field Coating Application
- QP 2 – Field Coating Removal
- QP 3 – Shop Coating Application
- QP 5 – Inspection Company Accreditation

How to get the best from QP.

Specify QP 5 along with QP 1, QP 2, and QP 3 to maximize benefits.

- Your Project is Backed by a Team. With independent inspectors, you may be dependent on a single inspector, with QP 5, you get an inspection team.
- QP Programs Work Best Together. With both the contractor and inspection company operating from the same set of consensus standards, QP 5 Inspection Companies are best positioned to deliver jobs with high quality, on time.
- Level Set Qualifications for Your Inspection Team. Specifying QP 5 for your jobs will make comparing inspection companies easier, since all QP 5 companies adhere to the same high standards.

Take the next step.

Add value to your upcoming projects by adding QP 5 to your specifications. Specifying a QP 5 inspection company will help your project run closer to plan with fewer callbacks and the knowledge that the coating will last.

**Have questions about how to
specify? Reach out to the QP team.**
