

Your project deserves it.

State-of-the-art fire proofing technology

Fire and its heat present a great risk to life and property. An intumescent coating will delay this process by creating a layer of char between the steel and fire.

In close cooperation with leading manufacturers, WIWA has developed the single-feed **HERKULES GX PFP**:

- Mounted on cart with lift for safe and easy operation
- Wide variety of accessories available

With an output of 9 l/min per 40 cycles and a pressure ratio of 75:1, it is ideally suited for the use for smaller areas and repairs.
