## SUMMER 200 I

StATE EXPENDITURE REPORT

THE NATIONAL ASSOCIATION OF STATE BUDGET OFFICERS,
founded in 1945, is the principal organization for the professional development of its members; for improving the capabilities of staff and information available to state budget officers; and for the development of the national fiscal and executive management policies of the National Governors' Association. It is a self-governing affiliate of the National Governors' Association. The National Association of State Budget Officers is composed of the heads of state finance departments, the states' chief budget officers, and their deputies. All other state budget office staff are associate members. Association membership is organized into four standing committees: Health, Human Services, and Justice; Financial Management, Systems, and Data Reporting; Tax, Commerce, Physical Resources, and Transportation; and Training, Education, and Human Resources Management.

Since its inception thirteen years ago, the State Expenditure Report has developed into a definitive baseline for the analysis of state spending. Expenditures reflected in this report represent over 99 percent of total state spending.

Expenditure data are provided by program area so that trends in state spending can be evaluated. The funding sources for state expenditures also are identified. In addition to state data sources, data were drawn from other organizations to highlight emerging policy issues.

Readers are cautioned that a more complete understanding of service levels within a given state would require comparisons of spending by both state and local government, which is not the purpose of this report. In addition, the data are self-reported by the states. Further information on report methodology is provided in the Appendix.

Web sites that are related to each expenditure category can be found within appropriate sections of the report and provide a good starting point for finding further information. Some key sites are listed below:

EXECUTIVE SUMMARY

## Economic Outlook, Summer 2001

States ended fiscal year 2000 in increasingly difficult fiscal positions. Since then, fiscal deterioration has become more serious in some states. According to NASBO's most recent The Fiscal Survey of States, a slowdown in state revenue growth and escalating expenditures, particularly state health care costs, will cause many state budgets to tighten. With health care spending accounting for 27 percent of all state expenditures, the resurgence of health care cost pressures significantly affect states' fiscal health.

In addition, a downturn in the financial markets and slower national economic growth lead analysts to predict deteriorating economic growth for states in the near future as compared to recent years' robust growth. According to The Fiscal Survey of States, states completed fiscal year 2000 with general fund balances that will help weather the present economic downturn, although fewer states reported budget surpluses than the previous year. States have built up rainy day funds to help prevent major disruptions in services to citizens during periods of slower economic growth. However, few states have tapped into these funds.

## State Expenditures

Total state spending in fiscal 2000, which captures both operating and capital expenditures, was approximately $\$ 945.3$ billion, up 7.4 percent from 1999. Federal funds reflect an 8.7 percent increase, while state funds reflect a 7.3 percent increase. From fiscal 2000 to

Figure I
TOTAL STATE SPENDING BY FUND SOURCE, FISCAL 1987 TO 2000

fiscal 200 I, states estimate that spending will increase 7.2 percent, to just more than $\$ 1$ trillion, while federal funds are projected to increase 9.2 percent. (See Tables I and 2). It should be noted that 23 states use a biennial budget cycle. In most cases, funds are not expended evenly in the two-year cycle. This may affect total expenditures in some states from year to year.

## State Spending Trends

This report examines the functional areas of state spending: elementary and secondary education, higher education, public assistance, Medicaid, corrections, and transportation. Since 1995, elementary and secondary education has gained a larger share of state expenditures. One of the largest state expenditures, Medicaid commands an increasingly significant share of state spending, 19.5 percent. Medicaid spending increases have leveled off the last few years; however, according to the Congressional Budget Office, the program is expected to experience renewed growth over the next few years. State expenditures for public assistance through cash payments continued to drop in fiscal 2000 due to welfare reform efforts and declining caseloads. It is important to note, however, that this function represents just 2.4 percent of total state spending. Another cost driver for states is construction and operating costs for new prison facilities.

Total state spending in fiscal year 2000 increased 7.4 percent. Details of state expenditures include:

- The share of total state spending financed by federal funds was 25.2 percent in fiscal year 1999 and 26 percent in fiscal 2000. Figure 1 reflects fiscal 1987 through 2000 state spending by fund source.
- Elementary and secondary education spending grew at 8.1 percent and higher education spending at 8.2 percent between fiscal years 1999 and 2000. The growth rate for elementary and secondary education and higher education is greater than the growth rate for total state spending in 2000.
- The share of state spending for Medicaid has grown from just less than 11 percent of state spending in 1988 to 19.5 percent in 2000.
- The percent change for public assistance expenditures between 1999 and 2000 reflects an increase of 2.2 percent. State welfare reform efforts, an improved economy, and decreased caseloads have caused public assistance expenditures to decrease 8.7 percent from 1998 and 1999.
- Total corrections spending increased 6.1 percent from 1999 to 2000. Corrections as a share of state spending is projected to increase 6.5 percent between fiscal year 2000 and 2001.
- Transportation spending in 2000 increased 4.1 percent. However, it is important to note that less than I percent of state spending on transportation comes from the general fund; the majority of transportation spending comes from other state funds.

Figure 2
ALL FUNDS PERCENT CHANGES FROM PREVIOUS FISCAL YEAR
FOR MAJOR SPENDING CATEGORIES, FISCAL 2000 AND 2001

## Outlook for the States

With the national economy slowing considerably, many states are facing a widening gap between revenues and expenditures. According to an ad-hoc survey conducted in conjunction with The Fiscal Survey of the States, revenue growth for the next fiscal year is likely to fall below current-year levels for about one-half of the states. Lately, a number of states have had to make downward adjustments to their fiscal 200 I revenue estimates and fiscal 2002 forecasts. Medicaid growth, which represents almost 20 percent of the average state budget, is growing faster than expected in more than half of the states.

Although the slowing national economy contributes most greatly to states' fiscal conditions, other factors affect state budgets including federal budget uncertainty, federal mandates, court ordered expenditures, and federal policy changes. The appropriate sources of funding and balance of responsibilities between states and the federal government continues to be debated. The federal budget and federal legislation affects states mainly in three areas: jointly funded state-federal programs, federal entitlement programs administered by states, and federal tax changes that affect state tax systems.

## Federal Policy Changes

The Balanced Budget Act of 1997 created the State Children's Health Insurance Program for states to design comprehensive health insurance programs for uninsured, low-income children; by 2002, it will have provided more than $\$ 24$ billion in federal grants. The law allows states to use these funds to expand insurance coverage under their existing Medicaid programs, or create new state children's health insurance programs (S-CHIP), or a combination of both.

In 1996, The Personal Responsibility and Work Opportunity Reconciliation Act (PRWORA) replaced the 60-year old Aid to Families with Dependent Children (AFDC) and several related programs and replaced them with the Temporary Assistance for Needy Families (TANF) block grant. It also moved state reimbursement from a system based on strict federal rules of eligibility and entitlement to a single state block grant based on historical funding levels. The new law gave states greater flexibility in creating programs that move welfare recipients into the workplace. A strong economy and aggressive state efforts to move recipients toward self sufficiency has brought about a decline in welfare caseloads that has far exceeded expectations.

## Tobacco Settlement Spending Initiatives

In 1998, 46 states, five commonwealths and territories, and the District of Columbia entered into a Master Settlement Agreement (MSA) with the five major tobacco companies to recoup medical costs of treating tobacco-related illnesses. Four states-Florida, Minnesota, Mississippi, and Texas-settled separately from the MSA. Since that time, states have begun receiving funds and implementing plans for spending that money. Governors' top use of tobacco settlement monies has been to fund health initiatives, including tobacco prevention and control programs, followed by education initiatives.

All 46 states that have made spending decisions have allocated some portion of their tobacco settlement funds to health priorities. The top priorities are tobacco prevention and control, elderly health programs including prescription drug program, State Children's Health Insurance Programs (SCHIP), maternal and child health (MCH), Medicaid, biomedical and health research, and chronic disease prevention programs.

Twenty-two states are spending some portion of their tobacco settlement on education initiatives. These include scholarships, school construction, technology, and literacy. In addition, while
receiving much less than health or education, welfare and social service programs received a substantial amount of tobacco settlement funding to improve or implement social services. Ten states allocated money for substance abuse or mental health programs. Early childhood development or children's social services received tobacco settlement funds in 7 states.

Many states invested their tobacco settlement monies in trust funds and economic development systems to yield future financial benefits. Twenty-two states allocated money to economic development, commerce and information technology. Also, although tobacco growing states and tobacco companies entered into a separate settlement, often called Phase II, six states allocate MSA funds to assist tobacco growers and quota holders or to assist the overall economies of tobacco dependent regions.

To date, only four states-Alaska, Arkansas, Louisiana and South Carolina-have approved plans to securitize their tobacco settlement funds. In Alaska and Arkansas, tobacco settlement money will be used primarily to fund school and university construction and renovation.

## Total State Expenditures

While state balanced budget requirements are diverse, and governors are given significant powers to ensure a balanced budget, states operate within stricter revenue/expenditure limitations than the federal government. Governors in 45 states must submit a balanced budget; in 4I states, the legislature must pass a balanced budget. States are required to make spending choices within available resources and must reduce spending when revenues come in under estimates. For the most part, states cannot incur a deficit, and must monitor their debt financing in order to avoid jeopardizing their bond ratings.

## Components of State Expenditures and Organization of Report

The 2000 State Expenditure Report reflects three years of data: actual fiscal year 1999, actual fiscal year 2000, and estimated fiscal year 2001. The text of this report focuses on actual fiscal year 2000 data.

For purposes of this report, the categories of state spending include elementary and secondary education, higher education, public assistance, Medicaid, corrections, and transportation. The "All Other'" category includes state functions not tracked individually in this report, such as hospitals, economic development, housing, environmental programs, health programs (including the State Child

Health Insurance Program), parks and recreation, natural resources, air transportation, and water transport and terminals. Chapters One through Seven discuss state expenditures in the following categories, respectively: elementary and secondary education, higher education, public assistance, Medicaid, corrections, transportation, and all other. Table 5 shows the proportion of each state's budget spent on these categories.

Capital spending is included with operating expenditures within each functional category, unless noted otherwise. Capital expenditures also have been collected separately in the following categories: corrections, environmental projects, higher education, housing, transportation and all other. Capital expenditure data can be found in Chapter Eight. The major sources of state revenue, including sales taxes, personal income taxes, corporate income taxes, gaming taxes, and other taxes and fees, are illustrated in Chapter Nine.

The Appendix contains Table A-I, which details total state expenditures by fund source, excluding bonds. In this table, general funds and other state funds are combined into one total called "state funds." The Appendix also contains Table A-2, detailing the Child Health Insurance Block Grant, and further information on the report methodology.

State governments have specific functional responsibilities that vary among states depending on the role of local governments in providing services. For example, elementary and secondary education often is considered a primarily local function with states' financial support nearing, on average, half of total spending in this area. However, there are exceptions, such as Hawaii, where the state government fully funds elementary and secondary education.

A more complete understanding of programs and service levels within a given state would require comparisons of spending by both state and local government, which is not the purpose of this report. In addition, because the data are self-reported by the states, some may be incomplete. These omissions can affect aggregate and regional tables.

## Definitions

General funds: Predominant fund for financing a state's operations. Revenues are received from broad-based state taxes. There are differences in how specific functions are financed from state to state, however.

Federal funds: Funds received directly from the federal government.

Other state funds: Expenditures from revenue sources that are restricted by law for particular governmental functions or activities. For example, a gasoline tax dedicated to a highway trust fund would appear in the "Other State Funds" column. For Medicaid, other state funds include provider taxes, fees, donations, assessments, and local funds.

Bonds: Expenditures from the sale of bonds, generally for capital projects.

State funds: General fund plus other state fund spending, excluding state spending from bonds.

The fund source breakdown for fiscal 2000 state spending is provided in Figure 3. State general funds have remained stable, from 47.7 percent in 1998 and 1999 and 48.1 percent in 2000.The share of state spending from federal funds has increased slightly, from 25.2 percent in 1999 to 26.0 percent in 2000.

Figure 3
TOTAL STATE EXPENDITURES BY FUNDING SOURCE, FISCAL 2000

Figure 4 reflects total state expenditures by functional areas. For fiscal 2000, state spending shares are as follows: 22.5 percent for elementary and secondary education, 19.5 percent for Medicaid, 10.9 percent for higher education, 8.8 percent for transportation, 2.4 percent for public assistance, and 3.8 percent for corrections.

Figure 4
TOTAL STATE EXPENDITURES BY FUNCTION, FISCAL 2000

Figure 5
COMPOSITION OF TOTAL STATE EXPENDITURES BY FUNCTION, FISCAL 1987 TO 2000

The shares of state spending for functional areas have shifted since 1987. For example, Medicaid surpassed higher education as the second largest state program in 1990 and has remained in this position throughout the 1990's. Of all the functional areas, only Medicaid and corrections represent a larger share of total state spending in fiscal 2000 than they represented in 1987, when this survey began. Figure 5 charts these changes.

Table 3 reflects shares of state spending on functional areas, by fund source, from 1988 to 200 I. Also, Table 5, at the end of the Executive Summary, highlights the share of each state's budget represented by various programs in fiscal 2000 and shows the wide variation among states in their spending patterns.

## General Fund Expenditures

Elementary and secondary education absorb the largest portion of the general fund. As Figure 6 shows, 34.9 percent of fiscal 2000 general fund spending was directed toward elementary and secondary education. Higher education accounted for 12.2 percent of general fund spending while Medicaid accounted for 14.4 percent of general fund spending. Figure 7 reflects the percentage change for general fund spending in each of the functional categories.

Figure 6 GENERAL FUND EXPENDITURES, FISCAL 2000

Figure 7
PERCENT CHANGE IN GENERAL FUND, FISCAL 2000 AND 2001

## Other State Funds Expenditures

Transportation accounted for the second largest portion of other state funds spending, 22.8 percent, second only to the "all other" functional area. For transportation, these funds largely represent receipts from gasoline taxes earmarked for highways. Both elementary and secondary and higher education functions also accounted for significant portions of the spending from other state funds: elementary and secondary education at 9.9 percent, and higher education at 13.9 percent.

## Federal Fund Expenditures

As reflected in Figure 8, Medicaid accounts for the largest portion of state spending from federal funds at 42.6 percent. Elementary and secondary education and transportation, at 10.5 and 9.3 percent respectively, follow. Medicaid's share of spending from federal funds increased steadily from 1988 through 1992, when it began leveling off in the 40 to 44 percent range (see Table 3). Expansions to the Medicaid program, increasing caseloads, and the increased use of provider taxes and voluntary contributions to secure matching federal funds all help to explain these increases.

Figure 8
FEDERAL FUND EXPENDITURES, FISCAL 2000

## Regional Spending Trends

Table 4 shows growth rates for each region of the United States, separated by state funds (general fund plus other state funds, not including bond funds) and federal funds.

The 1999-2000 growth rates for all funds for Rocky Mountain, Plains and Mid Atlantic states are below the national average, with growth rates for the New England, Southeast, Southwest, and Great

Lakes states exceeding the national average. Growth rates for the Far West states almost mirror the national average. For state funds, growth rates in most regions are similar to the trends for all funds. The growth and decline of federal funds by region varies considerably.

Table 4
REGIONAL PERCENTAGE CHANGE IN TOTAL EXPENDITURES, FISCAL 2000 AND 200I

Figure 9 shows the percentage change in state spending from state funds for 1999-2000 and 2000-200I. The New England region in particular experienced above average growth in 1999-2000.

Total state expenditure data can be found on Tables I-5, along with related footnotes at the end of this chapter. Chapter Eight contains tables reflecting total capital spending data reported by the states, and Chapter Nine contains the major general revenue sources reported by the states.

## General Notes

## In reviewing the tables, please note the following:

- Small dollar amounts, when rounded, cause an aberration in the percentage increase. In these instances, the actual dollar amounts should be consulted to determine the exact percentage increase.
- "State funds" refers to general funds plus other state fund spending. State spending from bonds is excluded.
- "Total funds" refers to funding from all sources-general fund, federal funds, other state funds, and bonds.
- The report methodology is detailed in the Appendix.

All States: Medicaid reflects provider taxes, fees, assessments, donations, and local funds in Other State Funds.

Massachusetts: "General Funds" encompasses Massachusetts's three major funds-General, Highway and Local Aid Funds. Massachusetts uses all three funds in the manner that most states, which typically have far fewer dedicated funds, use just their General Fund.

Missouri: General revenue includes refunds required by the Missouri Constitution for revenues received in excess of the revenue limit: in fiscal 1999, this totaled $\$ 98.9$ million. Federal and other funds for fiscal 2001 represent appropriations available to state agencies. These appropriations establish ceilings on what agencies may spend. These appropriations are often established at higher levels to provide agencies with appropriation authority in the event that revenues are available for various programs. Final expenditures will be substantially lower. Other funds include federal reimbursements received by the Department of Highways and Transportation and the Department of Conservation that have constitutionally created funds. With implementation of the state's new financial management system substantial changes have been made to reclassify federal and other funds and eliminate double counting of expenditures.

Nebraska: Fiscal 2001 "Other Funds" figures do not include trust funds because those funds are not appropriated. They are recorded as expenditures in the state accounting system and the amounts spent are included in the totals for both fiscal 1999 and fiscal 2000.

In fiscal 2000 the trust fund amounts included $\$ 28.6$ million for K12 education, $\$ 207.5$ million for higher education, $\$ 10.3$ million for corrections and $\$ 243.9$ million for all other state agencies. For comparison purposes with prior years, the "Other Funds" figures should be increased by the trust fund amounts for fiscal 2000.

Ohio: Certain federal reimbursements and block grants for certain human services programs (Medicaid,TANF, etc.) are deposited into the state's General Revenue Fund. Expenditures of these federal funds are contained in the General Fund number in this report to be consistent with other portrayals of Ohio's general fund. This amounts to $\$ 3,589$. 1 million fiscal 1999 and $\$ 3,830.2$ million in fiscal 2000. This has an impact on percentage of total general fund expenditure calculations as well as on comparisons of Ohio's federal funding levels.

Also, inherent in Ohio's budgetary accounting environment are significant overstatements of total spending due to two phenomena. First, fiduciary fund expenditures represent the distribution of funds collected by the state on behalf of other entities. These are not operating, program, or subsidy expenditures for the state. These expenditures total \$4,898 million in fiscal 1999 and $\$ 5,016$ million in fiscal 2000.

Additionally, "double counting" of revenue and expenditures related to intrastate transactions overstates overall state expenditure activity. The overstatement is primarily found in general services and intergovernmental service funds. Expenditure activity from these funds totals $\$ 752.9$ million in fiscal 1999 and $\$ 851.3$ million in fiscal 2000. This results in Ohio's "All Other" expenditures as a percentage of the total being overstated, and consequently other areas being understated.

Ohio appropriates capital appropriations on a biennial basis rather than an annual basis, therefore, the amounts shown for fiscal 2001 are estimates. Footnotes for fiscal 2000 are also applicable to fiscal 200 I estimates, but amounts cannot be provided at this time.

Tennessee: Tennessee collects personal income tax on income from dividends on stocks and interest on certain bonds.

Tax revenue estimates do not include federal funds and other departmental revenues. However, federal funds and other departmental revenues are included in the budget as funding sources for the general fund, along with state tax revenues.

## CHAPTER ONE <br> ELEMENTARY \& SECONDARY EDUCATION

Elementary and secondary education constitute the largest state expenditure category with $\$ 212.7$ billion in total expenditures for 2000. Its growth outpaced that of total state expenditures: overall state expenditures between 1999 to 2000 increased 7.4 percent, while elementary and secondary education spending increased 8.1 percent.

On average, elementary and secondary education constitute 22.5 percent of total state spending and nearly 35 percent of state general fund spending. Between 1999 and 2000, nine states had at least double-digit percentage increases. Despite the current economic slowdown, governors in many states are making elementary and secondary education their highest priority, indicating continued growth in spending for fiscal year 2002.

States' focus on elementary and secondary education includes increased efforts to ensure accountability, provide teacher training, reduce classroom size and provide more technology instruction. States also are grappling with the need to provide adequate funds for school construction and renovation and the relative roles of state and local governments in providing the funds needed for school repairs.

The following areas are the focus of many states' efforts to improve elementary and secondary education:

- Establishing assessment and accountability standards to set clear expectations for learning;
- Creating or revising school finance structures, including funding for facilities;
- Providing some opportunities for public school choice, often through intra-district enrollment or charter schools;
- Improving teacher quality through professional development;
- Expanding early childhood development education programs;
- Expanding technology capacities;
- Promoting extra learning opportunities such as summer reading programs.

At the federal level, the President's fiscal 2002 budget contains proposals to increase resources for elementary and secondary education. These funds would: increase accountability for student performance with annual state reading and math assessments in grades 3-8; focus on what works by using targeted funds to improve schools and enhance teacher quality; reduce bureaucracy
and increase flexibility with flexible funding increased at the local level; and empower parents by giving students in persistently lowperfuming schools choice to attend other schools.

This year, the reauthorization of the Elementary and Secondary Education Act also will focus federal attention on education. The law contains both formula and competitive programs to support education activities at the state and local level. Through these programs, the federal contribution to education spending is an estimated 7 percent of the overall funding for education activities.

The president's proposed reform consolidates many of the education programs into several goal-oriented programs: Achieving Excellence through High Standards and Accountability; Improving Teacher Quality; Moving Limited English Proficient Students to English Fluency; Promoting Parental Options and Innovative Programs; Encouraging Safe Schools for the 21 st Century; Providing Impact; and Encouraging Freedom and Accountability.

The President also has proposed to increase funding for the Individuals with Disabilities Education Act (IDEA). The law was enacted in 1990 as amendments to the Education for All Handicapped Children Act. This law provides states with funding as well as mandates to provide a free and appropriate education and procedural safeguards for all children with disabilities without regard to costs incurred by states and localities. Although the federal government committed to provide funding for 40 percent of Part B services under IDEA, it currently contributes only 12.6 percent.

## School Litigation

Courts continue to play a role in setting funding policies for education. Since 1971, most states have been subject to lawsuits seeking to reform their funding systems for education. These cases are litigated on the basis of state rather than federal constitutional language and generally either seek greater equity in funding among school districts or a guaranteed level of "adequate" funding for education. Eighteen state supreme courts have found the finance systems unconstitutional and many states are still actively involved in litigation. Even in states where litigation has not occurred or has not succeeded, the prospect of lawsuits has prompted revisions of state funding policy.

In addition to challenges focusing on school operating budgets, in at least 37 states school construction and renovation of facilities are the focus of legal challenges. The listing on the next pages provide details regarding litigation.

## Sources of Funding

States fund almost 50 percent of total school costs, while local governments contribute approximately 43 percent and the federal government contributes the remaining 7 percent. Local government contributions primarily are from local property taxes while state contributions primarily are raised through income and sales taxes. State funds for education as a percentage of total funding range from nearly 89.1 percent in Hawaii to 8.2 percent in New Hampshire.

A number of states have moved toward increasing their share of funding for elementary and secondary education by substituting state funds for local funds, often in order to reduce the reliance on local property taxes. Funds are distributed to schools as both general funds on a per-pupil basis and as categorical grants to support specific programs or needs. The federal share is a source of supplemental funding for poor school districts and also helps pay the cost of educating handicapped children.

## Distributing State Funds to School Districts

The average amount of state funds provided on a per pupil basis varies greatly from one state to another. States may use a variety of methods to provide aid to school districts. The most common methods are by flat grants, foundation programs, guaranteed tax base programs, percentage equalization programs, full state funding, and pupil weights.

The National Governors Association, in "Financing America's Public Schools," suggests that policymakers consider the following issues when redesigning a school finance system:

- Guarantee districts a minimum level of funding per student supplemented by additional funds raised by the district;
- Use funding formulas to drive education reform rather than merely allocating money to school districts;
- More closely link school funding formulas with school finance, governance and program reforms to improve student performance;
- Provide local school districts with greater flexibility on how funds are spent and hold them accountability for the expenditure of the funds;
- Provide financial assistance for school construction.

## Charter Schools

More and more states are moving quickly to set up charter schools while some states and school districts are debating their merits. The charter school movement developed out of a belief that schools formed by teachers, parents, school boards, and community members will provide new models of schooling and incentives that will improve the current system of public education.

A contract specifies how each charter school will operate and what must be done in order for it to receive funding. The charter school is accountable for improving student performance and achieving the goals of the charter. In several states, charter schools are not subject to most regulations that otherwise apply to public schools; however, in other states, charter laws are more restrictive. Research on the impact of charter schools remains inconclusive, with some researchers maintaining that it is difficult to measure the overall impact school choice has had on students or the education system.

Since the first charter school opened in St. Paul, Minnesota, in September 1992, the charter school movement has grown substantially. Currently, 36 states and the District of Columbia have charter schools, and the U.S. Department of Education estimates that over charter schools were in operation during the 2000-200 school year. Charter schools face substantial challenges in financing and business operations as many state charter school laws do not provide start-up or capital funds and provide limited operational resources.

## Fund Shares

Relative fund shares for 2000 are shown in the figure below.

Figure 10
STATE EXPENDITURES FOR ELEMENTARY AND SECONDARY EDUCATION BY FUND SOURCE, FISCAL 2000

## Regional Expenditures

The following table shows percentage changes in expenditures for elementary and secondary education for fiscal 1999-2000 and 2000-200 I For 2000, states in the New England, Southwest and Far West are well above the national average, while the Mid-Atlantic, Great Lakes, Plains, Southeast and Rocky Mountain states are below the national average.

Elementary and Secondary EducationExpenditure Exclusions

When comparing resources spent on elementary and secondary education, it is important to understand the types of programs states include in these figures. For this report, 40 states wholly or partially included employer contributions for teacher pensions and 30 states wholly or partially included contributions for health benefits. Among the states reporting, items that are excluded or partially excluded are: day care programs (40), school health care (38), Head Start (30), and libraries (22).

Summary expenditure data can be found on Tables 7-9, accompanied by explanatory notes. Table 10 lists programs excluded from the expenditure data.

## Elementary and Secondary Education Notes

Small dollar amounts, when rounded, cause an aberration in the percentage increase. In these instances, the actual dollar amounts should be consulted to determine the exact percentage increase.

Hawaii: Employer contributions to pensions and employer contributions to health benefits are excluded in fiscal 1999 and fiscal 2000 figures but included in fiscal 2001.

Massachusetts: The state appropriation for school libraries is in the form of a recommended spending level that the localities may adopt or not and is included. The balance of funding for school libraries is from the localities and is excluded.

Michigan: Figures reflect K-I2 education, the Michigan Department of Education, adult education and pre-school.

Nevada: Vocational education is included, but reflects only private sector regulation.

New Mexico: Actual expenditure data for all funding sources are not available at this time. Therefore, rather than fiscal 1999 actual, fiscal 2000 budgeted is reported. Similarly in the fiscal 2000 column, fiscal 2001 budgeted is reported, and in the fiscal 2001 estimated column, fiscal 2002 estimated is reported.

New Hampshire: The increase in fiscal 2000 expenditures reflects outlays from the state's Education Trust Fund, which was established to provide adequacy grants to support statewide school funding.

Ohio: See General Notes for discussion of double counting issues that affect percentage of total expenditure amounts.

Pennsylvania: Figures reflect funding in support of $K$ - 12 education and the operation of the Pennsylvania Department of Education.

Rhode Island: Local funds are excluded.

## CHAPTER TWO HIGHER EDUCATION

Higher education spending generally reflects state support of community colleges, vocational education institutions, and state university systems. In 2000, states estimate they spent $\$ 103$ billion on higher education. While higher education spending accounts for 10.9 percent of state budgets, it represents less than half of the amount spent on elementary and secondary education. The primary funding source for higher education is general funds, providing nearly 54 percent to the total funding (See Figure II). Thirty-nine states include tuition and fees and thirty-two states include student loan programs in the state expenditures reported here (See Table I5).

States report higher education spending growth between 1999 and 2000 to be 8.2 percent-slightly more than the growth in total state spending for the same period. Growth in higher education spending between 2000 and 2001 is estimated to increase by 6.3 percent-this reflects an anticipated 6.2 percent increase in state funds and a 5.2 percent increase in federal funds.

## Financing Issues

Spending on higher education increased again this year. The caveat for higher education, however, is that the pattern continues to prove that state spending is closely tied to economic cycles and fluctuates widely as tax revenues rise or fall with changing economic conditions. Because higher education is one of the few remaining areas within state budgets for which spending is strictly discretionary, and because in most states higher education institutions have discretion to decide how reductions or adjustments will be implemented, funding remains vulnerable to these outside factors.

As spending has increased for higher education, so have costs. The most common response to the increased costs has been, and continues to be, tuition increases. According to a survey by the Washington State Coordinating Board for Higher Education, tuition and fees for undergraduates at public four-year colleges and universities increased about 5 percent from 1999 to 2000. This increasing reliance on tuition as a revenue source could have significant financial implications for students in the future as states must manage their budgets during a cycle of falling revenues.

## Performance and Accountability

There is a growing trend by state policymakers and the public to ensure greater quality, productivity, and effectiveness among
postsecondary institutions. To hold colleges and universities accountable for the funds they receive from the state, thirty-seven states now have programs that in part fund public campus based on performance. Many public institutions are required to report on outcome and other measures, and two other methods which link performance to budgeting are performance funding, with allocations linked directly to performance, and performance budgeting, where performance is one of the factors considered in the allocation process. These methods are often added to the traditional considerations of current costs, student enrollments, and inflationary increases. The increased use of these methods by states demonstrates a growing belief that performance and accountability should play a role in allocating state resources to public education.

## Community Colleges

Policy makers are increasingly looking at two-year colleges with greater interest because of the variety of students they can serve and their relative low cost. Community colleges provide access to increasing numbers of students, retraining for displaced workers, training for those leaving the welfare rolls, and play pivotal roles in economic development efforts. Furthermore, community colleges often bear the responsibility for providing employment and language skills to growing immigrant communities, and for retraining current workers who must meet changing skill requirements in a more knowledge-based economy. Full-time tuition at community colleges, on average, is less than half of the average tuition at a public four-year institution, making it affordable to a wider population than four-year institutions.

Enrollments in community colleges reached 10.5 million students in 1998 and, from all indications, enrollment will continue to grow. With this increased demand for community college services come questions regarding access and costs. In about half of the states, state funds provide the largest share of public two-year institutions' total operating revenue; and every state community college system receives some level of state appropriations. Although state support has grown during the 1990s, community college leaders assert that these increases do not compensate for the enrollment growth that they have experienced. To compensate for the budget gaps, many states and community colleges have been forced to raise tuition. This, in turn, can price-out some students. States will be faced with budgetary challenges in helping to accommodate the increased utilization of community colleges.

## Distance Learning

Distance learning is becoming a common feature offered by a growing number of post-secondary institutions, and research indicates that it will become more common in the future. Through the use of many technologies, including Internet-based technologies and two-way interactive video, institutions are providing alternative opportunities to individuals with time and place constraints, such as working parents, students with disabilities, and workers seeking additional training for advancement.

A National Center for Education Statistics (NCES) study reported that 34 percent of all higher education institutions offered distance education course during the 1997-1998 school year (most recent year for which data is available) and enrolled more than 1.6 million students. An estimated 54,000 different distance education courses were offered, most of which were college-level, credit granting courses. Distance education is more likely to be conducted by public institutions- 78 percent of public four year institutions and 62 percent of public two year institutions offered distance education courses.

The trend to increase distance learning opportunities, particularly at public institutions, raises several fiscal questions for states, colleges and universities, and students. Some view distance learning as a cost savings approach to providing postsecondary education, but the costs in developing, implementing, and delivering the courses can also be substantial. Many institutions do not receive appropriations for these projects, rather, they reallocate funds within their existing budgets.

Students may also be impacted by the costs of developing distance education programs. The NCES study found that the additional costs or cost savings were not passed on to the students using this technology; about three-quarters of institutions charged the same tuition for the distance education courses as for comparable oncampus courses. Furthermore, federal financial aid often is not available to students using distance learning opportunities because of the nature of the institution offering the courses, the student being less than part-time, or both. Therefore, program costs and financial aid regulations can limit access to those non-traditional students who can be best served through distance learning.

States and institutions will face many questions and challenges as the demand increases for distance learning opportunities. In addition to meeting the fiscal challenges of developing and implementing distance learning opportunities, and providing
assistance to those who use the services, they will also have to answer other questions regarding equity of access to postsecondary education, accreditation and quality assurance, and pressures on existing organizational structures and arrangements.

## Capital Spending

In 2000 many states committed more spending to construction and renovation on public college and university campuses. The additional funds for capital spending are in large part due to strong state economies and budget surpluses. Also contributing to the increase is the ability of states to obtain low interest rates on construction related debt. While the additional funds for construction projects are welcomed, some college administrators are concerned about the costs and available funding to maintain existing facilities. One state noted that 4 percent of their state appropriation must be reserved for maintenance.

## Higher Education Notes

Small dollar amounts, when rounded, cause an aberration in the percentage increase. In these instances, the actual dollar amounts should be consulted to determine the exact percentage increase.

Alabama: Capital expenditure figures for higher education are not captured at the state level.

Hawaii: Employer contributions to pensions and employer contributions to health plans are excluded in fiscal 1999 and fiscal 2000 but included in fiscal 200I.

Illinois: Federal funds expenditures have increased due to a restructuring between federal and state funds.

Indiana: Bond figures include project appropriations approved during the fiscal year.

Maryland: Figures include all University System of Maryland campuses, Morgan State University, St. Mary's College of Maryland, all community college campuses including Baltimore City Community College, the Southern Maryland Higher Education Center, the Eastern Shore Higher Education Center, grants to the Johns Hopkins University and grants to the state's independent colleges through the Maryland Independent Colleges and Universities Association grant program.

Massachusetts: Federal fund expenditures are non-budgeted fund expenditures. Effective with fiscal 200 I, each higher education campus is required to expend 5 percent-up from 4 percent-of its combined total state appropriation and student retained revenues for maintenance.

Michigan: Expenditure fluctuations are due to the inclusion of bond funds and the cyclical nature of capital construction projects.

Montana: An accounting change in the guaranteed student loan program increases the federal expenditure in fiscal 200 I by $\$ 12$ million.

New Mexico: Assistance to private colleges and universities includes student choice general fund scholarships only.

Ohio: See General Notes for discussion of double counting issues that affect percentage of total expenditure amounts.

Pennsylvania: Figures include state funding for a student financial assistance program that helps students pay tuition and fees. Funding for vocational education is also included in Elementary and Secondary Education.

Rhode Island: Sponsored research grants are completely excluded from the survey. Sponsored research grants totaled $\$ 56.4$ million in fiscal 1999, $\$ 63.5$ million in fiscal 2000, and are estimated to total $\$ 56.9$ million in fiscal 200 I.

# CHAPTERTHREE PUBLIC ASSISTANCE 

2.4\% of State Expenditures

This report contains data on cash assistance provided through the Temporary Assistance for Needy Families (TANF) and other programs. Spending for these categories totaled $\$ 23$ billion in 2000 and represented 2.4 percent of total state expenditures. State spending for total cash assistance increased by 2.2 percent from 1999 to 2000. This slow growth reflects welfare reform efforts and a strong economy, which have led to a decline in TANF cases and, subsequently, a decline in cash assistance payments.

The primary source of public assistance funding is general funds, providing 49.2 percent, followed by federal funds at 42.8 percent (See Figure I3).

In general, states reported TANF expenditures for cash assistance. However, one state reported totalTANF expenditures, and another state included costs for the food stamp program.

The "other cash assistance" category, which includes optional state programs for Supplemental Security Income (SSI) and General Assistance, are not funded in all states, and when funded, are relatively small programs.

## Welfare Reform

The Personal Responsibility and Work Opportunity Reconciliation Act (PRWORA) of 1996, signed on August 22, 1996, replaced the 60 -year old Aid to Families with Depended Children with the Temporary Assistance for Needy Families (TANF) program. PRWORA significantly reformed the nation's welfare system into one that requires work in exchange for time-limited cash assistance. The new law shifted state reimbursement from a system based on strict federal rules of eligibility and entitlement to a single state block grant based on historical funding levels. PRWORA gives states more flexibility and responsibility in the design and operation of welfare programs. Within limitations, states have the authority to decide how to best serve the needs and improve the employment prospects of their needy citizens.

Since the creation of the TANF program in 1996, welfare caseloads have declined in every state. According to the latest U.S. Department of Health and Human Services (HHS) figures, welfare rolls dropped 59 percent nationwide between August 1996 and June 2000. Further, caseloads in thirty-eight states declined by more than 50 percent in that timeframe.

Strong national and state economies and state welfare reform efforts appear to have contributed to these significant caseload
declines. The nation's unemployment rate for 2000 was 4.0 percent, and in many parts of the country employers are finding it difficult to hire sufficient numbers of qualified low-skilled workers. Many welfare recipients are able to take advantage of these increased job opportunities. States can use the flexibility of the TANF block grant to provide work supports and incentives.

The combination of falling caseloads and fixed funding presents states with increased options as well as planning challenges. The flexibility of TANF funds provides states with increased opportunities to help needy families overcome barriers to work and remain employed. States are also faced with the challenge of serving persons who continue to receive time-limited cash assistance, many of whom face multiple barriers to employment. In addition, states are challenged to establish appropriate levels for "rainy day" funds to address potential caseload increases if the economy falters.

Expenditure data on total cash assistance, AFDC/TANF cash assistance, and other cash assistance can be found on Tables 18-26, accompanied by explanatory notes.

# CASH ASSISTANCE UNDER THE TEMPORARY ASSISTANCE FOR NEEDY FAMILIES PROGRAM 

I.5\% of State Expenditures

This section references cash assistance provided through the Temporary Assistance for Needy Families (TANF) program. Welfare reform legislation passed in 1996 replaced the Aid to Families with Dependent Children (AFDC) program with TANF. Since that time, states have experienced significant drops in their welfare caseloads and their spending on cash assistance. Funding levels, however, remain relatively constant because the block grant nature of the TANF program guarantees certain levels of federal funding. As the need for cash assistance expenditures declines, states are free to use the TANF funds for other services to assist families in making the transition from welfare to work and assist low-income families in general.

The nation has experienced a significant decline in the number of cases receiving cash assistance since August 1996 when the Personal Responsibility and Work Opportunity and Reconciliation Act of 1996 (PRWORA) was enacted. Prior to the enactment of PRWORA, there were 12.8 million welfare recipients. As of June 2000, the caseload was 5.78 million recipients, a 55 percent decrease. Welfare caseloads have declined in every state, and in thirty-eight states the caseloads declined by more than 50 percent during that time.

Spending on cash assistance has dropped with the declining caseloads. State and federal funds for TANF cash assistance expenditures decreased by 1.5 percent from 1999 to 2000 after having decreased 12 percent the previous year (see Table 23), and data from the U.S. Department of Health and Human Services $(H H S)$ shows that the portion of TANF funds spent on cash and work-based assistance has dropped from 74 percent of all TANF/AFDC expenditures in 1997 to 52 percent of all TANF expenditures in 2000.

Furthermore, few states have increased their cash assistance benefit levels. In fiscal year 2000, nine states increased cash benefit levels between 2.0 and 7 percent.

Under AFDC, declining caseloads would have resulted in automatic declines in federal and state spending. Yet while caseloads and cash assistance expenditures have declined, the amount of federal TANF funding remains constant and the amount of state funding has decreased only slightly. PRWORA specified that the annual TANF block grant allocations to states would be based on 1994 federal funding levels. A total of $\$ 16.5$ billion was authorized annually for TANF through federal fiscal year 2002.

In order for states to receive their full allotment of the TANF block grant, they must meet a maintenance of effort (MOE) requirement and therefore do not realize proportionate savings from the declining caseloads. Under the MOE requirement, states must continue to spend state funds at a level equal to at least 80 percent of state spending for AFDC-related programs in 1994. A state's MOE may be reduced to 75 percent if the state meets applicable TANF participation rates, thus possibly lowering the amount of state spending. In fiscal year 2000, all states met the 75 percent MOE level, and twenty-five states reported spending at or above the 80 percent level. Final fiscal 2000 MOE figures were not available from HHS at the time this report was published.

If states fail to meet their MOE requirements, the amount of that state's block grant will be reduced on a dollar for dollar basis. Furthermore, the state must make up the MOE shortfall with state funds or suffer a penalty reduction. The replacement of federal TANF dollars with state dollars may further depress any savings on the part of the state from lower caseload levels.

Taking advantage of the financial resources available because of declining welfare caseloads, many states are expending federal TANF funds and their MOE funds on a variety of services and benefits. States have provided funding for programs to address child care services, training and education, transportation needs, transitional rental assistance, substance abuse, job readiness and job retention training, and domestic violence.

For example, HHS reports that states transferred a cumulative total of $\$ 2.43$ billion in TANF funds to the Child Care Development Fund (CCDF) during fiscal year 2000. In addition, states spent $\$ 1.99$ billion ofTANF funds on child care services- $\$ 1.38$ billion in state MOE funds and $\$ 604$ million in federal funds, bringing the total amount of state and federal funds available for child care to $\$ 4.43$ billion.

States reported spending $\$ 1.75$ billion in federal and state funds on work activities in fiscal year 2000-an increase over fiscal year 1999. According to HHS data, states also reported spending $\$ 3$ billion for programs including emergency assistance, domestic violence services, child welfare, staff training, and fraud control. For this report, states reported that total state spending for cash assistance under TANF was $\$ 14.8$ billion in 2000, a decrease of 12 percent from 1999. TANF cash assistance represented 1.7 percent of total state expenditures in 2000. Expenditure data for TANF cash assistance can be found on Tables 21-23.

## OTHER CASH ASSISTANCE

The second component of cash assistance for public welfare reported here is other cash assistance, including state participation in the Supplemental Security Income (SSI) program, General Assistance (GA), and emergency assistance. For example, in 1999 twenty-eight states provided and administered supplemental payments to certain categories of SSI recipients. Each state determines the structure of its own program, resulting in significant variations in programs and funding. Thirty-five states, including the District of Columbia, have some form of GA program in which state government is involved. Some have statewide uniform eligibility rules while others simply require some form of county participation.

Other cash assistance programs accounted for only 0.9 percent of total state spending in 2000 . States spent $\$ 8.2$ billion for other cash assistance, with 69.1 percent funded from state general funds. Two states (New York and California) accounted for nearly 65 percent of total general fund spending on other cash assistance.

Expenditure data for other cash assistance can be found on Tables 24-26.

## Public Assistance Notes

Small dollar amounts, when rounded, cause an aberration in the percentage increase. In these instances, the actual dollar amounts should be consulted to determine the exact percentage increase.

Florida: The overall reduction in expenditures over the three years reported in the survey is due to declining caseload. In fiscal 1999 and thereafter, the Florida Legislature appropriated more funds in general revenue rather than federal funds so that the state could preserve its maintenance of effort. In fiscal 2000, the Legislature directed that child support enforcement collections ("other funds") be deposited in general revenue for use in cash assistance payments.

Massachusetts: "Other Cash Assistance" includes EAEDC benefits and SSI state supplement. Fiscal 1999 data have been adjusted to include $\$ 8.7$ million previously unreported for SSI for the blind.

Michigan: TANF Maintenance of Effort (MOE) requirements specify that Michigan must spend down a specific amount in state funds in order to draw down the annual federal block grant amount. Therefore, despite a caseload reduction of more than I8,000 between fiscal 1999 and fiscal 2000 (more than 50,000 between fiscal 1998 and fiscal 2000) the MOE requirement has
remained the same, prompting Michigan to maintain most general fund spending on public assistance in order to draw down the entire TANF grant and to avoid other penalties.
"Other Cash Assistance" figures do not include expenditures for day care, a large part of Michigan's public assistance program. Day care expenditures for the survey are estimated at the following levels: $\$ 400$ million for fiscal 1999; $\$ 427$ million for fiscal 2000; and \$461 for fiscal 2001.

Ohio: Federal funds deposited to the state General Fund and shown as General Fund expenditures for TANF amount to \$451.6 million in fiscal 1999 and \$519.3 million in fiscal 2000. Amounts shown for TANF represent all TANF costs, not just cash assistance. TANF cash assistance was $\$ 423.3$ million in fiscal 1999 and $\$ 377.2$ million in fiscal 2000. Also, see General Notes for Ohio on this issue and for discussion of double counting issues that affect percentage of total expenditure amounts.

Pennsylvania: Fiscal 2000 and fiscal 2001 are based on 75 percent Maintenance of Effort (MOE) for TANF programs. The MOE was 80 percent at the beginning of fiscal 1999. It was reduced to 75 percent effective October I, 1998.

Rhode Island: Federal funds for Other Cash Assistance include federal food stamp grants.

## CHAPTER FOUR MEDICAID

19.5\% of State Expenditures

## Medicaid Continues to be an Important Budget Issue for States

Medicaid, a means-tested entitlement program financed by the states and the federal government, provides medical care for about 40 million low-income individuals. Medicaid spendingapproximately $\$ 184.4$ billion in fiscal 2000—accounts for 19.5 percent of all state spending. Mirroring national health care trends, Medicaid expenditures have escalated and are consuming a greater portion of states' budgets. The pressure from escalating Medicaid costs coincides with the revenue slowdown in the states.

States must provide Medicaid coverage to certain population groups (members of families with children and pregnant women, and persons who are aged, blind, or disabled) and have the option of covering other populations. Certain basic medical services must be provided while additional services may be covered if the state chooses. These basic services include inpatient hospital care, nursing homes, state facilities for the mentally retarded, home health care, physician services, outpatient hospital care, and prescription drugs.

Total Medicaid spending in fiscal year 2000, excluding administrative costs, totaled approximately $\$ 184.4$ billion, or 7.5 percent more than the 1999 level. Medicaid expenditures have increased as a percent of total state expenditures, rising from 10.8 percent in 1988 to 19.5 percent in 2000 . Figures 14 and 15 provide actual and projected Medicaid costs for total spending and for state spending from 1970 to 2000. In addition to Medicaid, state spending on other health services accounts for another 8.3 percent of general fund spending.

## Medicaid Expenditures

The governors' recommended budgets for fiscal 2002 contain an estimated average annual increase of 7.8 percent for the Medicaid program. By comparison, states estimate a growth rate of 9.8 percent for fiscal 2001. A recent ad-hoc survey shows that about two-thirds of the states estimate that Medicaid expenditures in the current fiscal year will exceed the budgeted amounts. While current growth rates in Medicaid are less than the double-digit rates that states experienced in the early 1990s, they far exceed the 3 percent to 4 percent rate of general fund revenue growth.

Medicaid is projected to grow at an average annual rate of 8.6 percent from 2001 through 2011 according to the Congressional Budget Office (CBO). This follows a 9 percent rate of growth in 2000 and 6.7 percent in 1999 (the year that the recent upward spiral in Medicaid costs began). According to CBO, factors affecting the program's growth include the cost and use of medical services,
most notably from prescription drugs. States have also seen greatly increased enrollment of children in Medicaid due to the extensive outreach campaigns conducted in the State Children's Health Insurance Program (S-CHIP) and also from efforts to reenroll eligible individuals who had left the program following welfare reform.

Other factors affecting long-term Medicaid costs include wage pressures in the health care industry, continued demand for prescription drugs, and legal challenges under the Americans with Disabilities Act that may result in more individuals receiving longterm care services at home.

## Medicaid Expenditures for Prescription Drugs

Medicaid expenditures for prescription drugs rose by 50 percent between 1993 and I998, rising from $\$ 8$ billion to almost $\$ 12$ billion. Prescription drugs expenditures represent the third largest component of the Medicaid budget-approximately 10 percent. The growth rate of prescription drug prices-approximately 18 percent per year-is almost double the rate of the Medicaid program.

Under Medicaid, coverage of prescription drugs is an optional service that all states have elected to provide. Prescription drugs prices have risen nationwide and, according to the National Institute of Health Care Management, escalating sales from 23 relatively new medications accounted for about half of the spending increase in prescription drugs in 2000. Growth in direct-toconsumer advertising by drug companies also has affected the demand for prescription drugs. The Health Care Financing Administration (HCFA) estimates that prescription drug spending will increase by 17.4 percent and 16 percent in fiscal 2001 and 2002, respectively.

In the governors' recommended budgets for fiscal 2002, the total amount for Medicaid prescription drugs is estimated at $\$ 25.1$ billion, or about double the amount spent on prescription drugs under Medicaid in fiscal 1998. Prescription drugs accounted for about 10 percent of spending in fiscal 1998; estimates for fiscal 2002 are about 14 percent.

## Medicaid Expenditures for Long-Term Care

Another key component in Medicaid expenditures is the cost of long-term institutional care and the use of waivers for home- and community-based care. The estimated costs for long-term
institutional care are $\$ 42.1$ billion in fiscal 2002 , or 20 percent above the fiscal 1998 level. Twenty percent growth in this expensive component is in addition to the faster growth in home and community based alternatives to institutional care. In fiscal 2002, estimated expenditures are $\$ 15.8$ billion, or almost double the expenditures in fiscal 1998.

## Governors' Proposals to Manage Medicaid Costs

As Medicaid costs escalate, states are proposing various costcontaining measures. These measures include prior approval of certain services, anti fraud and abuse efforts, implementing pharmacy benefit management programs, and reducing optional benefits.

States are seeking larger discounts from manufacturers to purchase prescription drugs and reductions in reimbursement rates for some health care providers, such as nursing homes and hospitals. States also are using buying pools to leverage lower prices.

Because of the large percentage of state budgets that Medicaid commands, Medicaid spending increases are felt throughout state government, affecting resources allocated for other key services, such as education.

Figure 14
ACTUAL AND PROJECTED TOTAL MEDICAID SPENDING, 1970 TO 2000 (IN BILLIONS)

Figure 14, based on projections by the Congressional Budget Office (CBO) in January 200I, assumes a 57 percent federal share of total Medicaid costs. Figures for 1990 and prior years are from the Federal Funds Information for States Issue Brief 94-I4, Recent Trends in Medicaid Spending.

Figure 15
ACTUAL AND PROJECTED STATE MEDICAID SPENDING, 1970 TO 2000 (IN BILLIONS)

Figure 15, also based on projections by the CBO in January 2001, assumes a 57 percent federal share of total Medicaid costs. Figures for 1990 and prior years are from the Federal Funds Information for States Issue Brief 94-14, Recent Trends in Medicaid Spending.

STATE EXPENDITURES FOR MEDICAID BY FUND SOURCE, FISCAL 2000

## Regional Expenditures

The following table shows percentage changes in expenditures for Medicaid for fiscal 1999-2000 and 2000-200 I. For 2000, the Rocky Mountain, Great Lakes, Southeast, and Far West regions are well above the national average and the Plains and Southwest regions are well below the national average.

Additional expenditure data on Medicaid can be found on Tables 28-30, accompanied by explanatory notes.

Note: State funds are defined as general funds and other state funds (bonds are excluded)
Source: National Association of State Budget Officers, 2000 State Expenditure Report, Summer 200I

## Medicaid Notes

States were asked to report Medicaid expenditures as follows: General funds: all general funds appropriated to the Medicaid agency and any other agency which are used for direct Medicaid matching purposes under Title XIX. Other state funds: other funds and revenue sources used as Medicaid match, such as local funds and provider taxes, fees, donations, assessments (as defined by the Health Care Finance Administration). Federal Funds: all federal matching funds provided pursuant to Title XIX.

As noted above, the figures reported as Other State Funds reflect the amounts reported as provider taxes, fees, donations, assessments and local funds by states. State Medicaid agencies report these amounts to the Health Care Financing Administration (HCFA) on form 37, as defined by the Medicaid Voluntary Contribution and Provider-specific Tax Amendments of I99I (P.L. I02-234). However, some state budget offices are unable to align their financial reporting to separate these costs for the NASBO State Expenditure Report. Thus this report does not capture 100 percent of state provider taxes, fees, donations, assessments and local funds. Small dollar amounts, when rounded, cause an aberration in the percentage increase. In these instances, the actual dollar amounts should be consulted to determine the exact percentage increase.

The states were asked to separately detail the amount of provider taxes, fees, donations, assessments and local funds reported as other state funds.

Florida: For fiscal 1999, Other State Funds include the following: provider assessments $\$ 400.9$ million, estate recovery $\$ 3.5$ million, local county funds $\$ 92.4$ million, pharmacy rebates $\$ 74.3$ million, tobacco settlement, $\$ 53.8$ million, and state fraud recoupment $\$ 17.6$ million. For fiscal 2000, Other State Funds include: provider assessments $\$ 379.9$ million, estate recovery $\$ 0.1$ million, local county funds $\$ 94.1$ million, pharmacy rebates $\$ 114.2$ million, tobacco settlement, $\$ 67.9$ million, and state fraud recoupment $\$ 7.2$ million. For fiscal 200I, Other State Funds include: provider assessments $\$ 380.3$ million, estate recovery $\$ 0.1$ million, local county funds $\$ 181.8$ million, pharmacy rebates $\$ 113.4$ million, tobacco settlement, $\$ 69.6$ million, and state fraud recoupment $\$ 21$. I million.

Massachusetts: Fiscal 2000 data are estimates only.
Michigan: Other state funds include local funds in the following amounts: $\$ 905.9$ million for fiscal 1999; $\$ 1,219.6$ million for fiscal 2000; $\$ 1,261.0$ million for fiscal 200 I. Public health and community and institutional care for mentally and developmentally disabled persons are partially reported in the Medicaid totals.

Ohio: Federal funds deposited to the state General Fund and shown as General Fund expenditures for Medicaid amount to $\$ 3,083.2$ million in fiscal 1999 and $\$ 3,279.5$ million in fiscal 2000. See General Notes for Ohio on this issue. Also, interagency transfers of $\$ 579.9$ million in fiscal 1999 and $\$ 604.0$ fiscal 2000 tend to overstate the size of Ohio's Medicaid program. Also see General Notes for discussion of double counting issues that affect percentage of total expenditure amounts.

Dollars that are generated at the local level that are then used to draw down federal match are not included in Ohio's numbers for purposes of making the numbers reported here consistent with other reports for Ohio General Fund and All Fund spending.

Pennsylvania: Intergovernmental transfer (IGT) funds are included in the Other State Funds category and total $\$ 833$ million in fiscal 1999, $\$ 997$ million in fiscal 2000 and $\$ 1,089$ million in fiscal 200 I. State expenditures for Medicaid match are not accounted for separately from the state's overall medical assistance program. Therefore, the state match has been derived based upon federal reimbursement rates for individual programs. These figures include some payments on behalf of general assistance clients who do not qualify under Title XIX. A portion of the IGT funds provide the 10 percent local match required by Pennsylvania law for Medicaid clients in nursing homes. Other local funds used as match are not included in this report.

Rhode Island: Other State Funds include local match for education only. Provider taxes totaled $\$ 24.0$ million in fiscal 1999 , $\$ 24.6$ million in fiscal 2000, and are estimated to total $\$ 27.3$ million in fiscal 2001. Provider taxes are not reported discretely in the survey and are not used for state match. Local funds are used for state match, and are reported as Other State Funds. They are the only expenditure in that category.

Tennessee: Regarding premium revenue: fiscal 1999 totals $\$ 43.7$ million, fiscal 2000 totals $\$ 52.7$ million, and fiscal 200 I totals $\$ 50.0$ million. Regarding Certified Public Expenditures-Local funds from hospitals: fiscal 1999 totals $\$ 184.8$ million, fiscal 2000 totals $\$ 192.9$ million, and fiscal 2001 totals $\$ 171.5$ million. Regarding the Nursing Home Tax: fiscal 1999 totals $\$ 102.6$ million, fiscal 2000 totals I 02.8 million, and fiscal 200 I totals $\$ 102.8$ million. Regarding the ICF/MR 6 percent Gross Receipts Tax: fiscal 1999 totals $\$ 14.8$ million, fiscal 2000 totals $\$ 13.4$ million, and fiscal 2001 totals $\$ 13.4$ million. Regarding intergovernmental transfers: fiscal 1999 totals \$0, fiscal 2000 totals $\$ 105.9$ million, and fiscal 200 I totals $\$ 104.0$ million.

# CHAPTER FIVE STATE CORRECTIONS EXPENDITURES 

3.8\% of State Expenditures

Total fiscal 2000 state spending for corrections is estimated to total $\$ 36.1$ billion, a 6.1 percent increase from last year, but not nearly as large as 1995 when spending increased by more than 17 percent. Between fiscal 1992, the first year NASBO collected corrections expenditure data, and fiscal 2000, corrections spending increased an average of 8.4 percent. State corrections spending reflect the costs to build and operate prison systems and may include spending on juvenile justice programs and alternatives to incarceration such as probation and parole.

Overall, spending for corrections has remained relatively constant over the years. For fiscal 2000, spending for corrections was 3.8 percent of total expenditures and 7.0 percent of all state general fund spending. State spending for corrections primarily has been in the form of general fund dollars, averaging 87.1 percent of all corrections spending since fiscal 1992. State general fund shares for corrections in fiscal 2000 are 88 percent, or $\$ 31.7$ billion. Since 1992, the federal shares of state's corrections spending has averaged less than 1.4 percent, and totaled $\$ 1.1$ billion in state corrections spending in fiscal 1999.

Many states also face major demands for increased construction and operating costs for existing facilities. State capital expenditure data for corrections can be found in Chapter Eight and indicate that in fiscal 2000 over $\$ 2$ billion will be spent on capital construction for corrections, most of it (over $\$ 1.3$ billion) financed by bond proceeds. Capital spending for corrections decreased by 2.9 percent in 2000, it is expected to decrease by 4.4 percent in fiscal 2001.

## Regional Expenditures

The following table shows percentage changes in expenditures for corrections for fiscal 1999 to 2000 and 2000 to 200 I. Between fiscal 1999 and fiscal 2000, the Great Lakes and FarWest regions showed the largest increases of 12.6 percent and 7.1 percent, respectively.

In contrast, the Rocky Mountain region experienced a decrease in state corrections expenditures of 5.2 percent, while the Southeast and Plains regions had the lowest increases in corrections spending (3.3 percent and 4.5 percent, respectively) and were well below the national average in fiscal 2000.

## Corrections Expenditures Exclusions

For this report, twenty states wholly or partially excluded juvenile delinquency counseling from their corrections figures and twelve states wholly or partially excluded spending on juvenile institutions.

Nineteen states wholly or partially excluded spending on drug abuse rehabilitation centers, nineteen states excluded spending for local jails, and thirty-three excluded spending for institutions for the criminally insane.

Corrections expenditure data and a table listing programs excluded from the expenditure figures can be found on Tables 32-36, accompanied by explanatory notes. Also see Chapter Eight for details on corrections capital expenditure data.

## Inmate Population Continues to Rise as Crime Decreases

While violent and property crime rates have decreased over the past seven years, state prison populations have continued to climb and each year states continue to spend more on prisons. The FBl's preliminary 2000 uniform crime statistics show that the crime rate overall was relatively unchanged in 2000 from 1999. Index crime rate consist of violent crimes and property crimes. Violent crimes, consisting of murders, rapes, aggravated assaults and robberies were up 0.1 percent. Property crimes, consisting of burglaries, thefts, motor vehicle thefts and arsons were unchanged. Index crime rates dropped by 2.4 percent in the Northeast, I.I percent in the Midwest, and increased in the south by I percent, and I.I percent in the West.

The crime rate has stabilized, yet the number of inmates in custody continues to increase, but at a much slower rate than seen in previous years. In the year ending June 30, 2000, the nation's state prison population grew by the smallest percentage in 29 years at 1.5 percent. During this period, the number of inmates held in local jails rose by 15,206, in state jails by 27,953, and in Federal prisons by 13,50I. Between 1990 and 2000, the rate of incarceration increased from I in every 218 U.S. residents to I in every 142.

At midyear 2000, 1,931,859 persons were incarcerated in the nations prisons and jails, a 3 percent increase from 1999. Between 1999 and 2000, the number of persons held in state prisons grew from $1,151,261$, to $1,179,214$, a 2.4 percent rise. That increase is considerably less than the ten-year average increase of 5.9 percent. Inmates held in local jails increased by 2.5 percent from last year, totaling 621,149 in 2000.

States with the highest incarceration rate per 100,000 residents in 2000 include: Louisiana (793, a 3.8 percent increase from 1999); Texas (779, a 0.5 percent increase); Oklahoma (681, a 4.5 percent increase); and Mississippi (630, a 2.9 percent increase). States with the lowest incarceration rate per 100,000 residents include

Minnesota (129, a 6.9 percent increase from 1999); Maine (130, a 0.5 percent increase); North Dakota (I46, a 10.5 percent increase); and New Hampshire (185, -0. 1 percent increase).

Midwestern (2.6 percent) and Southern states (2.1 percent) led the nation in percentage growth in incarceration rates between 1999 and 2000. Twelve states realized declines in incarceration rates ranging from -0.1 to -10.8 .

## Adult Corrections Health Care

 ExpendituresAccording to NASBO's 1998-1999 State Health Care Expenditure Report-state health care spending for adult corrections in fiscal 1998 totaled $\$ 2.62$ billion, with states contributing $\$ 2.54$ billion. In fiscal 1999, spending totaled $\$ 2.84$ billion, with states contributing $\$ 2.54$ billion. In both years, states absorbed 97 percent of total costs. In terms of total amounts spent in fiscal 1998 and 1999 on adult corrections health care, state spending ranged from a high of $\$ 504$ million in California, to a low of 1.4 million in North Dakota. States spending the greatest amounts were California (\$504 million), Texas (\$359 million), Florida (\$229.7 million), and Michigan (\$173 million).

## Corrections Notes

Small dollar amounts, when rounded, cause an aberration in the percentage increase. In these instances, the actual dollar amounts should be consulted to determine the exact percentage increase.

Maryland: Figures include capital expenditures for the Department of Public Safety, state police, juvenile justice, and local jails. Fiscal 1998 and fiscall 999 figures do not include the public safety training center.

Massachusetts: Corrections expenditures are inclusive of state spending for county corrections, of which the state pays approximately 96 percent or, typically, $\$ 300$ million or more annually.

Michigan: Figures include adult inmate and juvenile justice expenditures.

Nevada: Juvenile programs and institutions are excluded from fiscal 2000 and fiscal 200I figures. For fiscal 1999, juvenile corrections reflected $\$ 11.4$ million in general funds, $\$ 1.0$ million in federal funds, and $\$ 1.3$ million in other state funds.

New Jersey:The State purchases jail space from the counties. This is included in Department of Corrections expenditures. Institutes for the criminally insane are funded through the Department of Human Services. The care and treatment of civilly committed sexual offenders are included in Department of Corrections expenditures. Juvenile institutions and programs are not included as part of the Department of Corrections. The Juvenile Justice Commission funds these institutions, which is included in the Department of Law and Public Safety.

New Mexico: Includes the federal violent offender incarceration truth in sentencing grant of $\$ 5.4$ million.

Ohio: See General Notes for discussion of double counting issues that affect percentage of total expenditure amounts.

# CHAPTER SIX TRANSPORTATION 

8.8\% of State Expenditures

Transportation represents 8.8 percent of total state expenditures. In 2000, states spent $\$ 83$. I billion on transportation, a 4.1 percent increase from the 1999 level of $\$ 79.8$ billion. Figures for capital spending on transportation by states show actual 2000 expenditures of $\$ 37$ billion.

State transportation expenditures are primarily funded from earmarked revenues placed in special transportation (highway) trust funds, captured in the "Other State Funds" category. The major earmarked revenue source is the gasoline tax. Listed below are state gasoline excise tax rates. It is important to note that some states also apply sales tax for the purchase of gasoline; the two should be considered in combination when assessing the tax burden by state. Also, many gas tax rates change frequently.The tax rates below are as of January of 2001.

## STATE GASOLINE TAX RATES <br> (as of January 200I)

| Alabama | 18.0 | Montana | 27.0 |
| :--- | ---: | :--- | ---: |
| Alaska | 8.0 | Nebraska | 24.8 |
| Arizona | 18.0 | Nevada | 24.0 |
| Arkansas | 20.7 | New Hampshire | 19.0 |

|  |  |  |  |

Although it continues to be a stable source of revenue, motor fuel taxes are not anticipated to increase, unless drastic changes in federal motor fuel tax rates occur as part of Transportation Equity Act for the 21 st Century (TEA-2 I). An example of a drastic change to the federal motor fuel tax rate that may increase state gas tax rates would be a substantial reduction or repeal of all or a portion of the federal gas tax rate. Currently, eleven states have variable rate motor fuel taxes and are adjusted at specific intervals to sustain funding levels. Also, if the federal tax rate should decrease, four states (California, Nevada, Oklahoma, and Tennessee) have provisions in their statutes that will automatically trigger an increase in the state motor fuel tax rate. Other states require a change in legislation to adjust fuel tax rates.

## TEA-2I

In June 1998, President Clinton signed into law the Transportation Equity Act for the 2 I st Century (TEA-2 I). In July 1998, the TEA-2 1 Restoration Act was enacted to provide technical corrections to the original law.

TEA-2I authorized $\$ 215$ billion in budget authority for highway, transit, research and motor carrier programs over six years (1998-2003). This includes $\$ 175$ billion in highway programs, of which $\$ 165$ billion is guaranteed funding, and provides $\$ 2.2$ billion for highway safety and $\$ 650$ million for motor carrier safety grants.

TEA-21 is a major revision of the former Intermodal Surface Transportation and Efficiency Act of 1991 (ISTEA) and is the result of months of negotiations and compromises between Congress, the executive branch and the states. Prior to TEA-2I, transportation funds were appropriated annually as part of the federal discretionary budget. Also, payments from the federal highway trust fund to the states were determined by separate formulas under individual programs and administered by the U.S. Department of Transportation. Under this funding scheme, the disparity between those states that collected more in motor fuel taxes than they received in federal funding, dubbed "donor" states, and states that receive more federal funding than they collected in fuel taxes, termed "donee" states, was considerable. This created criticism because many states received as little as 63 percent of what they contributed to federal gas taxes in federal transportation funding.

To address this issue, a new provision of TEA-2I was created to establish a 90 percent minimum level of transportation funding for each state. This was designed to eliminate the wide disparity between the "donor" and "donee" states under ISTEA. It
guaranteed "donor" states a minimum level of transportation funding by establishing budgetary "firewalls" between highway and transit programs and other discretionary programs. In addition to the "firewalls,"TEA-21 also removed the ability of Congress to shift reductions in total transportation spending to other federal discretionary programs. The result of these changes is an average increase or more than 40 percent in transportation funding.

In addition to higher overall funding levels, TEA-21 provides a guaranteed funding "floor" of $\$ 198$ billion for future highway spending ( $\$ 162.7$ billion) and transit programs ( $\$ 36$ billion). The $\$ 36$ billion funding guarantee for transit is fixed and will not vary over time. Actual funding levels may ultimately exceed $\$ 36$ billion, as they will be directly tied to actual federal gas tax receipts. There will still be "non-guaranteed" programs, such as AMTRAK, that will compete for funding in the federal budget.

## TIFIA

The Transportation Infrastructure Finance and Innovation Act of 1998 (TIFIA), a new federal innovative finance program, was authorized underTEA-2 1 . The program is under the direction of the Department of Transportation (DOT) and provides three forms of credit assistance for surface transportation projects of national or regional significance. TIFIA awards federal credit assistance rather than grants in the form of secured loans, loan guarantees, and standby lines of credit to public and private sponsors of major transportation projects. Sponsors consist of state departments of transportation, private entities, transit operators, local governments, and special authorities.

Since the inception ofTIFIA, the DOT has selected 10 projects at a federal government budgetary cost of $\$ 194$ million and has provided $\$ 3.14$ billion in credit assistance supporting transportation investments worth nearly $\$ 12$ billion.

## Fiscal $\mathbf{2 0 0 0}$ projects selected for funding include:

- Staten Island Ferries and Terminals, New York City.
- Cooper River Bridge, Charleston, S.C.
- Tacoma Narrows Bridge, Pierce County, WA.

## Fiscal 2001 projects selected for funding include:

- Central Texas Turnpike Project,TX.This is a $\$ 3.2$ billion project supported by an $\$ 800$ million TIFIA loan.
- Reno Transportation Rail Access Corridor Project, NV. This is a $\$ 242$ million project, supported by a $\$ 79.5$ million TIFIA loan.

## Aviation Reauthorization

In April 2000, President Clinton signed into law the Wendell H. Ford Aviation Investment and Reform Act for the 21 st Century (AIR-2I), that will increase authorizations by more than $\$ 10$ billion to a level of $\$ 40$ billion over the three-year period from 2001-2003. The funds will be used for airport improvement programs to enhance facilities and equipment, airport operations and research. Of the funding, $\$ 33$ billion is guaranteed from the Aviation Trust Fund. A total of $\$ 6.7$ billion is subject to appropriations from the general fund.

The bill also authorizes airports to increase maximum passenger facility charges from $\$ 3.00$ to $\$ 4.50$ to be used for airport improvements that benefit passengers and communities. Examples of improvements consist of noise mitigation, security, safety, and building terminal and landside infrastructure to meet the growing need for air transportation.

Recently, the Federal Aviation Administration Office of Airports announced that 30 U.S. airports are approved to increase their passenger facility charge to $\$ 4.50$.

Total funding levels are listed below including a state-by-state breakdown for airport improvement programs.

| AIR 21 FUNDING LEVELS (\$ IN BILLIONS) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | FY 2000 | FY 2001 | FY 2002 | FY 2003 |

TEA-2I VS. FY 1999 PAYMENTS BY STATES TO THE HIGHWAY TRUST FUND AND FEDERAL-AID APPORTIONMENTS AND ALLOCATIONS FROM THE HIGHWAY TRUST FUND (\$ IN THOUSANDS)

Note:These numbers do not include tax receipts transferred to the Mass Transit account.
Source: Highway Statistics 1999, Federal Highway Administration, U.S. Department of Transportation.

* Represents the average estimated allocation as per TEA-2I for 1998 thru 2003. FY 1998 to FY 200 I apportionments reflect actual apportionments. Apportionment estimates for FY 2002 and FY 2003 are based on factors used for FY 2000 apportionments.

## Fund Shares

The figure below provides fund shares for 1999 .

Figure 18
STATE EXPENDITURES FOR TRANSPORTATION BY FUND SOURCE, FISCAL 2000

## Regional Expenditures

The following table shows percentage change in transportation expenditures for fiscal 1999-2000 and fiscal 2000-2001. For fiscal 2000, the Southwest and Great Lakes states were well above the national average of 4.1 percent at 12.1 and 11.6 percent, respectively. Also, the percentage change in the Plains states was strikingly well above the national average for fiscal 2000 at 8.5 percent. The state of Illinois has included funds that will be used for a major highway improvement program that extends from 19992003. The Southeast and Mid-Atlantic states were well below national average.

## Transportation-Expenditure Exclusions

Of the states reporting in this survey, sixteen wholly or partially excluded gas tax and fee collections from their transportation expenditure figures. Thirty-five states wholly or partially excluded port authority operations, twenty wholly or partially excluded motor vehicle licensing, and forty wholly or partially excluded state police/highway patrol.

Expenditure data on transportation can be found on Tables 37-4I, accompanied by explanatory notes. Table 41 lists programs excluded from the expenditure figures. Details on capital expenditures for transportation can be found in Chapter Eight.

Table 37
REGIONAL PERCENTAGE CHANGE IN STATE TRANSPORTATION EXPENDITURES, FISCAL 2000 AND 200I

|  | Fiscal 1999 to 2000 |  |  | Fiscal 2000 to 2001 |  |  |

## Transportation Notes

Small dollar amounts, when rounded, cause an aberration in the percentage increase. In these instances, the actual dollar amounts should be consulted to determine the exact percentage increase.

Florida: The Florida Legislature provided $\$ 200.2$ million in general revenue to the Florida Department of Transportation (DOT) in fiscal 2000 for projects related to the Mobility 2000 (Building Roads for the 21 st Century) initiative. The funds were transferred to DOT and then placed in the State Transportation Trust Fund to be used for capital projects.

Massachusetts: Train/railroad subsidies are mostly excluded effective fiscal 2001.

Nevada: Nevada has no ports, and thus no port authority operations.
There are also no train or railroad subsidies.

New Mexico: Does not include federal funds.

Pennsylvania: Gasoline taxes are collected by the Department of Revenue.

Ohio: See General Notes for discussion of double counting issues that affect percentage of total expenditure amounts.

Tennessee: Bond estimates represent bond authorizations, while actual bond figures represent bond proceeds utilized.

Texas: The gasoline tax is the major fund source for the Texas constitutionally dedicated state highway fund, from which expenditures are made.

## CHAPTER SEVEN ALL OTHER EXPENDITURES

To capture total state expenditures, NASBO collected data on state expenditures not included in the functional areas covered in the previous chapters. Depending on the state, this category could include spending for the State Child Health Insurance Program (SCHIP), institutional and community care for mentally ill and developmentally disabled persons, public health programs, employer contributions to pensions and health benefits, economic development, environmental projects, state police, parks and recreation, housing, and general aid to local government. A list of items excluded from All Other Expenditures is shown in Table 46.

In the aggregate, such spending accounts for an estimated 32.1 percent of all state expenditures in 2000 , totaling $\$ 303$. I billion. For these types of functions, state spending increased 8 . I percent from 1999 to 2000. Data for All Other expenditures can be found on Tables 43 accompanied by explanatory notes.

## State Child Health Insurance Program

The State Children's Health Insurance Program (S-CHIP), enacted in 1997, provides coverage to uninsured children in low-income families. The program was designed to reach children from working families with incomes too high to qualify for Medicaid but too low to afford private insurance. States may develop S-CHIP programs in one of three ways to serve the individual needs of their population: expand its Medicaid program, develop an alternative state program, or create a program that is a combination of the two options. With federal guidelines, each state determines its specific program design, eligibility categories, benefits covered, provider payments, and administrative and operating procedures.

Under S-CHIP, states receive an enhanced federal matching rate that exceeds their federal Medicaid match by about 30 percent, with the federal share capped at 85 percent. States have up to three years to use their yearly federal allotment. Although states are eligible to receive additional S-CHIP funds each year, they cannot use the new funds until the funds from the previous year are expended.

Nearly two million children were enrolled in S-CHIP during federal fiscal year 1999 (October I, 1998 to September 30, 1999). During this time more than 1.2 million children were served by separate programs, and almost 700,000 children were served by Medicaid expansion programs. S-CHIP enrollment is expected to increase as states expand their programs, conduct effective outreach, streamline their application processes, and improve procedures to assure that eligible children retain coverage. In addition, S-CHIP programs help states identify and enroll children already eligible for Medicaid but not enrolled.

Of the states tracking S-CHIP-related Medicaid enrollment activities, most anticipate enrollment due to grow by 14.8 percent in fiscal 2001. On average, estimated S-CHIP-related Medicaid enrollment growth in fiscal 2000 was 26.5 percent.

Expenditures for S-CHIP programs totaled $\$ 127$ million in fiscal 1998, representing 0.1 percent of total state health spending and a negligible percent of all state spending in fiscal 1998. In fiscal 1999, these expenditures increased to $\$ 989$ million, representing 0.4 percent of total state health spending and 0.1 percent of all state spending. These amounts represent the combined expenditures for Medicaid expansion programs, stand-alone programs, and combination programs. State S-CHIP expenditures are detailed in Table A-2.

## Fund Shares

The figure below provides fund shares for 2000 .

Figure 19
STATE EXPENDITURES FOR ALL OTHER PROGRAMS BY FUND SOURCE, FISCAL 2000

General Funds 41.0\%

## Regional Expenditures

The following table shows percentage changes for all other expenditures for fiscal 1999-2000 and 2000-2001. For 2000, the New England, Great Lakes, and Southwest states are well above the national average and the Plains and Far West states are well below the national average.

## All Other Expenditure Notes

Small dollar amounts, when rounded, cause an aberration in the percentage increase. In these instances, the actual dollar amounts should be consulted to determine the exact percentage increase.

Hawaii: Employer contributions to pensions and employer contributions to health benefits are excluded in fiscal 1999 and fiscal 2000 but included in fiscal 2001.

Kentucky: Capital expenditures are made from a separate capital fund. Once the originating funds are transferred into it, they lose their original fund source identity. Therefore, all capital expenditures are reported here as "all other.'"

Maryland: Figures include academic revenue bonds issued by the University System of Maryland, and bonds issued by the Maryland Environmental Service for the local government infrastructure program. They also include all appropriations in the Board of Public Works, the Departments of Aging, Business and Economic Development, Education, and Health and Mental Hygiene, Maryland Public Television, Maryland Historical Trust grants, Department of Housing and Community Development museum projects, and miscellaneous grants to local governments.

Michigan: Public health and community and institutional care for mentally and developmentally disabled persons are partially reported in the Medicaid totals.

Missouri: Except for higher education institutions and the Department of Transportation, all fringe benefits are appropriated and paid centrally and are therefore included in all other expenditures.

Montana: State general fund reimbursements to local governments for property tax were $\$ 12$ million fiscal 1999, $\$ 25$ million fiscal 2000, and $\$ 67$ million fiscal 2001 . Fire costs in fiscal 2001 are anticipated at $\$ 60$ million in general funds and $\$ 24$ million in federal funds.

New York: While the state budgets most employer contributions to employees' benefits centrally, contributions have been estimated for each expenditure category and distributed accordingly. The portion of employer contributions to employees' benefits not distributed by expenditure category have been included in the "All Other Expenditures" category.

Pennsylvania: Housing excludes the activities of the Pennsylvania Housing Finance Agency.

Rhode Island: Figures include child care.

## CHAPTER EIGHT CAPITAL EXPENDITURES

Capital expenditures are expenditures made for new construction, major repairs and improvements, land purchases and the acquisition of major equipment and existing structures. Minor repairs and routine maintenance are reported as operating expenses. States often find it difficult to report capital expenditures. Given the longterm nature of capital projects, the amount of money appropriated when a project is undertaken will usually not be the amount spent in a single year. For additional information, see Capital Budgeting in the States in the publications section of the NASBO website at www.nasbo.org.

This chapter includes capital expenditures for higher education, corrections, transportation, environmental projects, and housing. Capital expenditures not included in these categories due to differences in states' reporting capabilities, or expenditures for items not easily classified are included in the "All Other" category. Tables 47-53 display capital expenditure data.

## Total Capital Expenditures

Between fiscal 1999 and fiscal 2000, state capital spending increased by 4.8 percent. From 199I to 2000, capital spending has increased by an average of 5.3 percent. Fiscal 2001 estimates reflecting capital spending on infrastructure are $\$ 70.7$ billion, which would represent an 15.4 percent increase.

Because of the nature of capital spending, such as long construction timetables and unforeseen or delayed project costs, increases in state spending on capital projects are generally followed by a significant slowdown or decrease.

## Capital Fund Sources

State spending on capital projects traditionally has come from nongeneral fund sources, namely bonds ( 25.7 percent in fiscal 2000) and other state funds such as fees and fund surpluses (43.9 percent in fiscal 2000). Since 1991, bonds and other state funds have comprised 69 percent of capital fund sources, while federal funds average 25.3 percent. State general funds account for only 5.8 percent of capital spending during the same period.

## Capital Funds by Use

The single largest state capital expenditure category is transportation, comprising 60.3 percent ( $\$ 36.9$ billion) of all capital expenditures in fiscal 2000. If estimated fiscal 2001 figures hold true, transportation-related capital spending will increase by 9.6 percent.

Figure 20
CAPITAL EXPENDITURES BY TYPE, FISCAL 1991 TO 2001

Higher education grew 3.4 percent from fiscal 1999 levels, totaling approximately $\$ 6$ billion, or 9.8 percent of fiscal 2000 total capital spending. It is estimated to grow 32.2 percent in fiscal 200 I.

Corrections capital expenditures shrank slightly in fiscal 2000, totaling $\$ 2$ billion, a 2.9 percent decrease compared to fiscal 1999.

State capital spending for environmental purposes in fiscal 2000 is $\$ 4$ billion, 6.7 percent of total capital spending and a 17.4 percent increase over fiscal 1999.

## Figure 21

TOTAL CAPITAL EXPENDITURES BY FUNDING SOURCE, FISCAL 2000

Federal Funds 23.6\%

Housing capital expenditures account for just 1.2 percent of total fiscal 2000 capital spending, at $\$ 716$ million, an 11.6 percent decrease from the previous year.

State spending for all other purposes totaled $\$ 11.2$ billion, amounting to 18.4 percent of total capital spending, and reflecting a 2.7 percent decrease from fiscal 1999.

## Capital Spending Notes

Alabama: Capital expenditures from federal funds and other state funds cannot be broken out separately.

Florida: The Florida Legislature provided $\$ 200.2$ million in general revenue to the Florida Department of Transportation (DOT) in fiscal 2000 for projects related to the Mobility 2000 (Building Roads for the 21 st Century) initiative. The funds were transferred to DOT and then placed in the State Transportation Trust Fund to be used for capital projects.

Indiana: Bond figures include project appropriations approved during the fiscal year.

Kentucky: Capital expenditures are made from a separate capital fund. Once the originating funds are transferred into it, they lose their original fund source identity. Therefore, all capital expenditures are reported here as "all other.'"

Maryland: Figures include programs funded though the Department of Housing and Community Development, excluding the Maryland Historical Trust programs and museum projects. Revenue bonds issued for the Local Government Infrastructure Program are excluded. Environmental spending includes programs and projects funded in the Departments of Agriculture, Environment, and Natural Resources. It also includes the Maryland Energy Administration, the Maryland Environmental Service (including the local government infrastructure program), and the Asbestos Abatement, CFC Mitigation, and Underground Storage Tank Upgrade/Replacement programs funded in the Board of Public Works.

Massachusetts: The Commonwealth maintains an administrative annual limit on general obligation debt; it is \$1 billion for fiscal 1999 through fiscal 2001. Fiscal 2001 includes $\$ 248$ million in special obligation bonds for proposed convention center construction. Federal funds disbursed directly to local housing authorities for capital housing projects are not included.

Michigan: Higher education capital expenditures made from nonstate funds are excluded.

Nevada: Transportation data reflect funds by year spent. Other capital spending is tracked by project, and by year authorized by the biennial legislature. Except for transportation, figures for fiscal 1999 were authorized by the 1999 legislature, spending began in fiscal 2000, and authority lasts four years. The next capital improvement program will be authorized this spring by the 200 I legislature.

New Mexico: Environmental spending includes direct appropriations only; federal loans are excluded.

Pennsylvania: While federal funds for transportation capital expenditures are anticipated, they are not included due to the difficulty in estimating the varying reimbursement and match requirements.

Tennessee: Bond estimates represent bond authorizations, while actual bond figures represent bond proceeds utilized.

Texas: Separate figures by fund category cannot easily be identified. Figures in all fund categories reflect appropriated, not expended, amounts only. Totals include the Higher Education Fund, which excludes capital expenditures from formula appropriations to institutions of higher education.

## CHAPTER NINE <br> REVENUE SOURCES <br> IN THE GENERAL FUND

States' general fund revenue is estimated to total $\$ 453.4$ billion in fiscal 2000. The major sources of states' general fund revenues are shown in Table 54. Sales and compensating use taxes represent 33.3 percent of total general fund revenue, personal income taxes account for 41.6 percent, and corporate income taxes equal 7.6 percent. Combined, these sources represent 82.5 percent of general fund revenues. Also displayed in the table are gaming taxes, which represent 0.8 percent of the total, and other taxes and fees, amounting to 16.7 percent.

Although sales, personal income, and corporate income taxes are the most significant sources of general fund revenues, states use a variety of taxes and fees to finance their general funds. These include gaming taxes, lottery funds, and motor vehicle taxes, all of which often are earmarked for special purposes or specific funds.

What is referred to as "other taxes and fees" in the general fund may include cigarette and tobacco taxes, alcoholic beverage taxes, insurance premiums, severance taxes, licenses and fees for permits, inheritances taxes, and charges for state-provided services.

Table 55 illustrates the major items that are excluded from general fund revenue sources. For example, property taxes are a mainstay of local government finance and the majority of states exclude them from both their general funds and their revenue bases. However, many states use aid to local governments or other subsidies to help reduce the amount of property taxes local governments require.

Trends in State Tax Actions. States enjoyed overall fiscal health throughout 2000. As a result, governors enacted $\$ 5.8$ billion in tax and fee reductions in their fiscal 2001 budgets. This marked the seventh consecutive year that states cut taxes, totaling $\$ 33.8$ billion over that period. By contrast, net state tax reductions occurred only twice during the 1980s, equaling just more than $\$ 3$ billion. Most of the fiscal 2000 tax cuts focus on reducing personal income and sales taxes. Presently, nine states do not have broad-based personal income taxes: Alaska, Florida, Nevada, New Hampshire, South Dakota, Tennessee, Texas, Washington, and Wyoming.

Revenue Collections. Throughout 2000, as the stock market surged and consumer confidence rose, states enjoyed especially healthy revenue collections, benefiting from large capital gains realizations, growth in partnership income, large bonuses, and strong retail sales. However, the more recent economic slowdown has caused the hefty rate of revenue growth that surprised many states during the past few fiscal years to become less certain.

## Revenue Sources in the General Fund

Massachusetts: For the purposes of this survey, general fund revenues include those in the highway and local aid funds as well as the general fund.

Effective in fiscal 2001, most of one percentage point of the 5 percent sales tax is dedicated to funding the operations of the state's primary mass transit authority. Although these revenues, estimated at $\$ 645$ million in fiscal 200I, are not budgetary receipts (they are deposited in a trust fund), they are included to facilitate revenue comparisons across fiscal years.

Fiscal 2001 personal income taxes incorporate two changes: the first year of a three-year phase-in of the reduction in the tax rate to 5 percent approved in a voters' initiative referendum and a deduction for charitable contributions. The revenue impact in fiscal 200 I for the two tax cuts is estimated at $\$ 135$ million and at $\$ 70$ $\$ 90$ million, respectively.

Severance taxes are not levied in Massachusetts and property taxes are levied and expended by the state's 34 I cities and towns only. About 70 percent of the cigarette tax is dedicated to health carerelated minor funds. Small percentages of motor fuels and certain sales taxes are dedicated to environmental minor funds and to certain convention center development, respectively. Gaming taxes are those on racing, raffles/bazaars, two discrete lottery games and boxing, and are general fund revenue. Most lottery revenue is allocated to the cities and towns.

Michigan: Actual fiscal 1999 and fiscal 2000 amounts reflect general fund non-dedicated revenue as contained in the respective State of Michigan Comprehensive Annual Financial Reports. Revenue figures have been adjusted to put them on a basis comparable to the consensus estimates. Fiscal 2001 estimates are the January 200 I consensus revenue estimates. Revenue totals are affected by phased-in rate cuts in personal income tax and in single business tax (corporate tax).

Missouri: General revenue resources include other taxes and fees and local use tax funds sent to the state for refund for fiscal I999 (\$79.1 million).

Nebraska: The sales tax amount for fiscal 1999 reflects a reduction in the state sales tax from 5.0 percent to 4.5 percent for one year only. The amount shown for the personal income tax for fiscal 1999 reflects the impact of changes passed in the prior year, including an across-the-board rate reduction, an increase in the personal credit, and a deduction for health insurance premiums for self-employed individuals.

Nevada: Nevada has no personal or corporate income tax, or lottery.
Pennsylvania: Other taxes and fees include non-tax revenues such as interest earnings, transfers from other funds and miscellaneous revenues.

Texas: Sales and competing use taxes exclude the motor vehicle sales tax, which is included in other taxes and fees. Corporate income taxes include the corporate franchise tax.

## Child Health Insurance

## Block Grants

Colorado: Each year the General Assembly makes an appropriation from the General Fund for CBHP, and puts those funds in the CBHP Trust. Moneys are then expended from the Trust.

Connecticut: SCHIP reimbursement is set at 65 percent. This amounted to $\$ 8$ million, $\$ 8.6$ million, and $\$ 9.6$ million in fiscal years 1999, 2000, and 200 I, respectively. The state spends all general fund dollars first, and then claims the federal reimbursement, which then goes to the state's revenues. Federal aid comes in the form of an after-the-fact reimbursement after upfront spending by the state.

Ohio: Other State Funds are an offset to general fund spending for Medicaid; therefore, were other funds not available, general funds would have been used.

Tennessee: Tennessee received approval for the Child Health Insurance Block Grant on September 3, 1999. Insurance forTennessee children is included in our TennCare waiver. Tennessee can only access these Child Health Insurance Block Grant funds if our waiver expires or we revert back to the Medicaid program.

## Methodology

The 2000 State Expenditure Report reflects three years of data: actual fiscal year 1999, actual fiscal year 2000, and estimated fiscal year 200 I. The text of this report focuses on actual fiscal year 2000 data.

This survey reports state expenditures in six functional categories: elementary and secondary education, higher education, public assistance including Aid to Families with Dependent Children/Temporary Assistance for Needy Families, Medicaid, corrections, and transportation. All other expenditures make up a seventh category. The report includes expenditures from four fund sources, including general funds, federal funds, other state funds, and bonds. Data for each category includes employer contributions to current employees' pensions and to employee health benefits for employees.

Elementary and secondary education spending includes state and federal fund expenditures only, and excludes local funds raised for education purposes. States were also asked to include, where applicable, state expenditures that support the state's Department of Education, transportation of school children, adult literacy programs, handicapped education programs, programs for other special populations (i.e., gifted and talented programs), anti-drug programs, and vocational education. States were asked to exclude spending for day care programs in the school system and spending for school health and immunization programs.

For higher education, states were requested to include expenditures made for capital construction, community colleges, vocational education, law, medical, veterinary, nursing and technical schools, and assistance to private colleges and universities, as well as tuition and fees and student loan programs. Higher education expenditures exclude federal research grants and endowments to universities.

Spending for public assistance includes expenditures for cash assistance under the Aid to Families with Dependent Children (AFDC) program, Temporary Assistance for Needy Families (TANF) programs, and other cash assistance (i.e., state supplements to the Supplemental Security Income program, general or emergency assistance). States were asked to exclude administrative costs from reported expenditures. Medicaid spending amounts also exclude administrative costs, while including spending from state funds, federal matching funds and other funds and revenue sources used as Medicaid match such as provider taxes, fees, assessments, donations, and local funds.

For corrections, states were asked to include, where applicable, expenditures for capital construction, aid to local governments for jails, parole programs, prison industries, and community corrections, as well as expenditures made for juvenile correction programs. States were asked to exclude expenditures for drug abuse rehabilitation programs and institutions for the criminally insane.

Transportation figures include capital and operating expenditures for highways, mass transit, and airports. States were also asked to include expenditures for road assistance for local governments, the administration of the department of transportation, truck and train/railroad programs, motor vehicle licensing, and gas tax and fee collection. The data excludes spending for port authorities, state police and highway patrol.

The "all other" expenditure category includes all remaining programs not captured in the functional categories previously described, including the State Children's Health Insurance Program and any debt service for other state programs (i.e., environmental projects, housing). States with lotteries were asked to exclude prizes paid to lottery winners. States were also asked to exclude expenditures for state-owned utilities and liquor stores.

Capital spending is included with operating expenditures within each functional category, unless otherwise noted. Capital expenditures have also been collected separately in the following categories: corrections, environmental projects, higher education, housing, and transportation. Capital expenditure data can be found in Chapter Eight.

Chapter Nine illustrates the major sources of state revenue including sales taxes, personal income taxes, corporate income taxes, gaming taxes, and other taxes and fees.

Readers are cautioned against comparing federal fund figures presented here with those on Federal aid which may be referred to in other documents, particularly those from the U.S. Bureau of the Census; many states have not established comprehensive statewide reporting of Federal funds and as a result the numbers in this report may understate Federal funds for any one function.

An important part of the report are tables included in four of the functional categories which reflect expenditures that states have excluded from their reported data. Each table underscores the observation that state-to-state expenditure comparisons in any functional category can be misleading. For example, one state may have included its juvenile institutions in its corrections budget, while another state may have included them in its human resources
budget. Comparisons for one state over time, however, should prove accurate.

All years reported are state fiscal years unless otherwise indicated. In forty-six states, the fiscal year begins on July I and ends on June 30. The exceptions are as follows: in Alabama and Michigan the fiscal year begins on October I; in Texas, the fiscal year begins on September I; and in New York, the fiscal year begins on April I. Additionally, the length of budget cycles vary among states, with more than half of the states budgeting annually and the remainder enacting biennial budgets.

## Definitions

General Fund: Predominant fund for financing a state's operations. Revenues are received from broad-based state taxes. There are differences in how specific functions are financed from state to state, however.

Federal Funds: Funds received directly from the Federal government.

Other State Funds: Expenditures from revenue sources, which are restricted by law for particular governmental functions or activities. For example, a gasoline tax dedicated to a highway trust fund would appear in the "Other State Funds" column. (Note: For Medicaid, other state funds include provider taxes, fees, donations, assessments and local funds.)

Bonds: Expenditures from the sale of bonds, generally for capital projects.

State Funds: General fund plus other state fund spending, excluding state spending from bonds.
