If your child is infected,

- Make sure they wash their hands often.
- Have them avoid touching their eyes with their hands.
- Avoid reusing towels, washcloths, handkerchiefs, and tissues to wipe their face and eyes.
- Change their pillowcase frequently.

Your child can return to school or day care after symptoms of redness and discharge improve, or as advised by a doctor.

*Make an appointment with an ophthalmologist, a medical doctor who specializes in treating diseases and conditions of the eye, to determine the best course of treatment for your child.*
