Naloxone Use in the School Setting: The Role of the School Nurse

Position Statement

SUMMARY

It is the position of the National Association of School Nurses (NASN) that the safe and effective management of opioid pain reliever (OPR)-related overdose in schools be incorporated into the school emergency preparedness and response plan. The registered professional school nurse (hereinafter referred to as school nurse) provides leadership in all phases of emergency preparedness and response. When emergencies happen, including drug-related emergencies, managing incidents at school is vital to positive outcomes. The school nurse is an essential part of the school team responsible for developing emergency response procedures. School nurses in this role should facilitate access to naloxone for the management of OPR-related overdose in the school setting.

BACKGROUND

Deaths from prescription painkillers (opioid or narcotic pain relievers) have reached epidemic levels in the past decade according to the Centers for Disease Control and Prevention (CDC) (2014a). A crucial mitigating factor involves the nonmedical use of prescription painkillers—using drugs without a prescription or using drugs to obtain the "high" they produce. In 2010, the CDC stated about 12 million Americans (age 12 or older) reported nonmedical use of prescription painkillers in the past year (CDC, 2014a). The 2013 Partnership Attitude Tracking Study (PATS) stated almost one in four teens (23 percent) reported abusing or misusing a prescription drug at least once in his or her lifetime, and one in six (16 percent) reported doing so within the past year (Feliz, 2014). According to the Substance Abuse and Mental Health Services Administration’s (SAMHSA) National Survey on Drug Use and Health in 2013, there were 2.2 million adolescents ages 12 to 17 who were current illicit drug users (SAMHSA, 2014). Given the magnitude of the problem, in 2014 the CDC added OPR overdose prevention to its list of top five public health challenges (CDC, 2014b).

RATIONALE

Schools should be responsible for anticipating and preparing to respond to a variety of emergencies (Doyle, 2013). The school nurse is often the first health professional who responds to an emergency in the school setting. The school nurse possesses the education and knowledge to identify emergent situations, manage the emergency until relieved by emergency medical services (EMS) personnel, communicate the assessment and interventions to EMS personnel, and follow up with the healthcare provider. Harm reduction approaches to OPR overdose include expanding access to naloxone, an opioid overdose antidote, which can prevent overdose deaths by reversing life-threatening respiratory depression. When administered quickly and effectively, naloxone has the potential to immediately restore breathing to a victim experiencing an opioid overdose (Hardesty, 2014).

Naloxone saves lives and can be the first step towards OPR abuse recovery. It provides an opportunity for families to have a second chance with their loved ones by getting them into an appropriate treatment regimen (Lagoy, 2014). Ensuring ready access to naloxone is one of the SAMSHA’s five strategic approaches to prevent overdose deaths (SAMHSA, 2013).

CONCLUSION

OPR overdose kills thousands of Americans every year. Many of these deaths are preventable through the timely provision of an inexpensive, safe, and effective drug and the summoning of emergency responders (Davis, Webb & Burris, 2013). School nurses must be familiar and sensitized to the legal issues, which vary from state to state in
terms of the prescription and availability of naloxone. They should review local and state policy on how to access naloxone and implement its use as part of their school emergency response protocol.

It is also important to prevent students from ever misusing opiates. School nurses are crucial primary prevention agents in school communities. Through utilization of prevention materials, school nurses can provide valuable awareness and education on the dangers of prescription drug misuse to K-12 students and their families. In addition, school nurses can help families recognize signs and symptoms of substance abuse, guide them to locate resources, and assist them in making referrals for treatment of OPR addiction.
