

## State News for NSPE Members

### **New Report Identifies New Hampshire as Promising Offshore Wind Provider**

A new [report](#) from the New Hampshire Departments of Energy, Environmental Services, and Business and Economic Affairs explores the possible positive outcomes of harnessing wind power at state sites at the Gulf of Maine. The agencies report that wind initiatives could help New Hampshire's economy and create jobs while reducing greenhouse emissions in the region.

Factors that were considered include existing port infrastructure in the state, coastal transmission infrastructure, and opportunities to attract offshore wind supply chain operations to New Hampshire. The report's authors also considered possible impacts to maritime industries.

### **Internet Service Providers Oppose New Hampshire Broadband Improvement Projects**

In conflict with Grafton County's plan to beef up broadband infrastructure for its towns, some internet service providers argue the move is unnecessary because they already provide high-speed internet to the area, according to Bristol Town Administrator Nik Coates, [WMUR](#) reports.

Grafton County applied for a federal grant through the National Telecommunications and Information Administration to fund the broadband project. Coates said some of the current providers, such as Comcast, have challenged more than 3,000 of the 4,000 census blocks that would be part of the project because they provide internet to at least one household in each block.

### **Meet the 2022 Federal Engineer of the Year**

Robert Zueck, Ph.D., P.E., was named NSPE's [Federal Engineer of the Year](#) during a [virtual awards event](#) on February 24 for his discoveries and contributions in the engineering field. The Federal Engineer of the Year Award, sponsored by the Professional Engineers in Government, honors engineers employed by a federal agency that employs at least 50 engineers worldwide.

Zueck works in the US Department of the Navy's Naval Facilities Engineering Systems Command (NAVFAC), Expeditionary Warfare Center at Port Hueneme, California. He is heralded for applying his vibration research to military defense projects for which engineers can now design beyond the speed, agility, and stealth limitations of many military sensors, weapons, and platforms.

"Every success for me has come out of the hard teamwork of many fellow engineers and scientists," Zueck stated. "I thank them all—particularly those who provided valuable constructive criticism of my rather unique research results."

In a basic research project conducted several years ago, Zueck discovered how geometrically complex vibrations initiate, grow, and sustain themselves, often limiting higher performance for many combat systems. He used this new vibration knowledge to improve the Expeditionary Warfare Center's modeling capability for designing, analyzing, and deploying towed sensors, ship moorings, sub-sea arrays, and other slender naval structures.

"This basic science discovery could be very useful for modeling, simulating, and testing in many other fields of engineering and science," he said.

## Mark Your Calendars: 2022 Professional Engineers Conference

August  
**1-3**  
2022  
Philadelphia, PA  
Sheraton Philadelphia  
Downtown

The 2022 NSPE [Professional Engineers Conference](#) will bring together professional engineers across disciplines from August 1–3, in Philadelphia at the

Sheraton Philadelphia Downtown. Registration for the conference opens in April.

PECON attendees can access specialized content from experts as they discuss issues and trends impacting the profession, develop power skills and life skills not taught in school, and advance their careers by expanding their expertise and preparing for future developments in the industry.

The seventh annual [PE Day](#) will coincide with the conference's culmination on August 3. These two events allow PEs to join their peers in celebration of the profession and advocacy for licensure.

NSPE will continue to monitor health and safety guidelines while we proceed toward hosting this in-person event.

## 2022 NSPE Student Scholarships Available

Students can apply for the 2022 NSPE Education Foundation scholarships through a new [online submission platform](#). The following scholarships have an **April 1** application deadline:

The [Maureen L. and Howard N. Blitman, P.E., Scholarship to Promote Diversity in Engineering](#) is awarded annually to a high school senior from an ethnic minority who has been accepted into an ABET-accredited engineering program at a four-year college or university.

The [Auxiliary Legacy Scholarship](#) is awarded annually to a female undergraduate entering or continuing their junior year of a four-year ABET-accredited engineering program.

The [Steinman Scholarship](#) is awarded annually to undergraduates entering or continuing their junior year in a four-year ABET-accredited engineering program.

The [George B. Hightower, P.E. Fellowship](#) is awarded annually to a current engineering undergraduate or graduate student who is enrolled in, or graduated from, an ABET-accredited engineering program.

**Coming soon!** The [Swadesh and Om P. Popli, P.E., P.L.S. Scholarship](#) will be a multi-year scholarship, providing \$5,000 each year for the recipient's four-year education. Applicants must be a female high school senior from an ethnic minority pursuing a degree in engineering at an ABET-accredited program.
