

State News for NSPE Members

Virtual Membership Meeting on 2/18: Don't Miss It

By Harry Gong, P.E., F.NSPE

To Participate: [Click here to access the virtual meeting.](#)

Meeting ID: 865 1447 8583

Passcode: 470461

I am inviting all Mississippi NSPE Members to attend a virtual membership meeting that is scheduled for Thursday, February 18, 2021 from 11:30am to 12:30pm.

During this meeting the following items will be presented and discussed:

1. NSPE Updates
 - a. New Executive Director & CEO - Monika Schulz, CAE
 - b. Updates from NSPE Officers/Staff
2. Mississippi Legislature Updates
3. [Engineers Week](#) (February 21 - 27)
4. Nominations for Mississippi House Delegate 2021-2023
5. Time for members to share

Please make note of item 4 as I intend to share the duties and commitment that are required to serve as the House Delegate in addition to other volunteer opportunities for serving NSPE. So if you are interested in serving, please attend this meeting so that you can learn how you can get more involved with NSPE.

If anyone has any questions, feel free to comment or [email me directly](#).

Governor Signs EWeek Proclamation

Governor Tate Reeves has [signed a proclamation](#) declaring February 21-27 as National Engineers Week in Mississippi. Get all the details about [EWeek](#) on the DiscoverE website.

Where To Spend Lottery Dollars? State or Local Roads?

Lottery revenue earmarked for maintenance on state highways would be diverted to local road and bridge needs under legislation pending in the Mississippi Senate, [according to Mississippi Today](#). During a special session in 2018, lawmakers adopted the state lottery and decided the first \$80 million in annual lottery revenue would be earmarked for MDOT. The legislation would divert any lottery revenue in excess of \$80 million to public education. The bill's author says Mississippi's state-funded highways rank eighth in the nation, but locally funded roads and bridges are among the worst in the country.

Mississippi Job Opportunities

Postdoctoral Research- Machine Learning

Agricultural Research Service (ARS)- ORISE

Research Agricultural Engineer

USDA-ARS-Pollinator Health in Southern Crop Ecosystem Research Unit

New Report: Valuing Professional Licensing

For years, professional associations and regulatory boards lacked hard data that demonstrated the value of licensing. In 2020, the Alliance for Responsible Professional Licensing (ARPL) sought to fill that information gap by commissioning Oxford Economics to help better understand the nuanced impacts of licensing on professions and trade and vocational occupations. NSPE is a founding member of ARPL.

The report [Valuing Professional Licensing in the United States](#), includes several key findings:

- Across all professions and occupations, **licensing is associated with a 6.5% average increase in hourly earnings**, even after accounting for the job holder's educational attainment, gender, and racial demographics.
- Among professionals in technical fields requiring significant education and training, **a license narrows the gender-driven wage gap by about one third and the race-driven wage gap by about half**.
- Those in trade and vocational occupations can expect a **7.1% hourly wage**

increase after becoming licensed, while those in a profession requiring advanced education and training can expect a **3.6% wage increase** after becoming licensed.

ARPL will host a **live webinar on February 24, 2021 (3:00 p.m. eastern standard time)** to review findings and conclusions of the report and share new strategies for lawmaker outreach. [Register now](#) .

Licensing Reform Must Prioritize Public Safety, Says NSPE President

NSPE President Tricia Hatley has once again made the case for keeping public health, welfare, and safety at the forefront of efforts to reform occupational licensure and increase mobility.

In a recent column directed to state and local government leaders, Hatley warns of the risks of implementing one-size-fits-all universal licensure proposals that do not maintain necessary education and experience standards.

Most people agree professionals should be allowed to move across state lines and earn a living with the least cost and hassle possible. Likewise, most people want to protect the public's health, safety and welfare by ensuring they are being served by qualified professionals who have the knowledge, skills and experience for the job. This is especially true in highly technical, high-impact professions that the Alliance for Responsible Professional Licensing represents like certified public accountants, architects, engineers, surveyors and landscape architects.

Here comes the rub: many of the universal licensing proposals being pitched to state lawmakers, including those put forth by the American Legislative Exchange Council and in Arizona, tend to focus exclusively on the first point—improving mobility—while disregarding the second—ensuring standards necessary to protect the public.

In other words, universal licensing mandates don't consider the critical importance of substantially equivalent requirements between states. Instead, they dictate that states must accept a license issued by any state without regard for, understanding of, or any input in, the underlying minimum competency requirements behind the license.

PEs Can Strengthen Autonomous Vehicle Safety

NSPE is calling on the National Highway Traffic Safety Administration to rely on the expertise of professional engineers and follow recommendations in the Society's [Autonomous Vehicle Policy Guide](#) as part of the federal safety frame work for automated driving systems.

In [recent public comments](#) , NSPE President Tricia Hatley informed the agency that NSPE is committed to creating a world where the public can be confident that engineering decisions affecting their lives are made by qualified and ethically accountable professionals. NSPE [Position Statement No. 03-1772](#) states that the testing and deployment of AVs must include a professional engineer. The rationale for the position is rooted in a professional engineer's ethical obligation to protect the public health, safety, and welfare.

The Society also recommends that the NHTSA implement a third-party verification process. A third-party verification process should establish that the ADS technology under review meets a minimal level of safety, as determined by an assessment of risk. This can be done through the submittal of risk assessments audited by a professional engineer who is in responsible charge of the third-party verification process.
