As 100% renewables mandate nears, Puerto Rico sees new microgrid initiative, resilience focus

When considering the future energy mix of Puerto Rico, worsening hurricane seasons and high levels of poverty in the territory are top of mind for energy experts.

Distributed generation is critical to boosting energy resilience on the island, participants noted yesterday at the Black Start 2019 conference in Puerto Rico, reflecting on lessons learned from Hurricane Maria in 2017.

Energy, policy and regulatory experts discussed a transition to cleaner, distributed generation as a cost-effective solution to harden the U.S. territory’s grid. Besides the high price tag of shipping fossil fuels to generate electricity, the island’s centralized system remains vulnerable to extreme weather events.

Complete the Engineering Team With NICET Certification

In the late 1950s, as the US came to rely more heavily on machines and automation, technically skilled workers who could support the work of engineers were in high demand. In 1961, NSPE rose to the challenge by forming an organization to certify technicians and technologists.

But even though technicians have been an integral part of the engineering team and NSPE since then, that organization—the National Institute for Certification in Engineering Technologies—is not always understood by PEs. A well-attended, NSPE-sponsored webinar on May 29 provided the full picture.

During the webinar, “Quality and Safety Through a Qualified Engineering Team,” NICET Communications Director Chip Hollis detailed the institute’s operations and the technician’s role on the team. NICET was founded to recognize the qualifications of technicians. Its focus, Hollis explained, helps ensure a qualified engineering workforce, certifying both engineering technicians and technologists in areas such as construction materials testing, transportation construction inspection,
Stay current with essential professional development opportunities through NSPE webinars. Members receive a special rate on the upcoming live webinar:

On **June 26 at 2 p.m.**, the webinar *The Saint Joseph Water Crisis – Lessons Learned in the Age of Deteriorating Water Infrastructure* will focus on a water crisis in Saint Joseph, Louisiana, which lends many lessons related to the difficulties faced by small and large water systems in rural environments. In this session, David A. Martin, P.E., will present an overview of the state of the town’s water system prior to and after construction, as well as an overview of the new treatment process and applicability to other aquifer systems. Additionally, participants will be presented with the lessons learned during the crisis, including regulatory involvement, use of multiple funding sources, early owner procurement of long lead time equipment, and alternate project delivery.
