

The Population Association of America and
The Association of Population Centers present:

Living, Working, Dying: Demographic Insights into COVID-19

Friday, April 23

12:00 -1:00 PM ET

REGISTER HERE

MODERATOR:

Dr. Noreen Goldman

Princeton University

PANELISTS:

Dr. Caitlyn Collins

Washington University in St. Louis

Dr. Marc Garcia

University of Nebraska

Dr. Anna Gassman-Pines

Duke University

The COVID-19 pandemic has made clear that factors such as age and pre-existing conditions intersect with socioeconomic and demographic characteristics—such as race-ethnicity, gender, and income—to influence both the onset and severity of the disease, as well as its trajectory. Not only has the pandemic laid bare stark differences in health and mortality for different groups of people, but also dramatic inequalities in outcomes such as education, work, family dynamics, and mental health. In this briefing, population scientists will share research findings on the disparate impacts of COVID and what additional research and data are needed to understand and address its far-reaching effects.
