## WEBINAR

### How Spinal Injections Can Aid in the Rehabilitation of an Injured Worker

**Date:** Thursday, October 16, 2014

**Time:** 8:30 a.m.

**Continuing Education Credits:** 1.5 hours

**Cost:** \$10.00

**To register:** Email [deborah\\_hildebrand@corvel.com](mailto:deborah_hildebrand@corvel.com) for the link to Go To Webinar

**Join Drs. Mark Coleman and Michael Wong as they explain different types of injections, their uses, and the expected benefits for patients.**

**Content:** Injections have become a **treatment of choice for many medical conditions** and often are used for diagnostics, management of pain, and to avoid more invasive procedures. We seem to be addressing those requests daily. **Questions about use, appropriate administration, how many, how often, and expected results are common** among claims professionals, nurse case managers and injured workers.

The various types of injections can be mind boggling - - epidural steroid injections, facet and sacroiliac joint injections, medial branch blocks/chemical neurolysis, sympathetic blocks, radial frequency ablation/neurotomy, discography, peripheral nerve injections, peripheral joint injections, trigger point injections, percutaneous disc decompression.

**Presenters:** National Spine and Pain Centers

***Dr. Mark Coleman***

- MD, Johns Hopkins University School of Medicine
- BA, Wesleyan University
- Internship: Internal Medicine, Sinai Hospital, Baltimore, MD
- Residency: Anesthesiology, University of California, San Francisco, CA

***Dr. Michael Wong***

- MD, Drexel University College of Medicine (MCP Hahnemann)
- Internship: Department of Medicine, Drexel University College of Medicine
- Residency: Anesthesiology UMDNJ Robert Wood Johnson University Hospital
