

**Speaker:** Chad Glenn, FCAS, MAAA

**Title:** Actuarial Perspective & Procedure

**Description:** Several members of RIMS and those that attend regular RIMS chapter meetings oftentimes work with actuaries—however, there tends to be this shroud of secrecy about how the actuarial process works and how the risk management program affects the outcome of the actuarial study. Our goal is to remove the shroud.

**Take-Aways:**

- *Understanding Loss Triangulation*
- *The strengths/weakness of each common actuarial method and when each method is more appropriate*
- *Understanding the impacts of changes in the risk management program (such as safety programs, case reserve strengthening, paying claims quicker, etc...) to the actuarial evaluation*
- *Important items to discuss with your actuary*
- *Industry information (trends, benefits, loss ratios, etc..)*
