Thank you to SGIM and the selection committee for this honor. I am grateful to have an opportunity to thank the many people whom I would not be here without.

My mentors and teachers from graduate school, including Mike Chernew, John Ayanian, Tom McGuire, Joe Newhouse, Kate Baicker, and David Cutler provided the inspiration and opportunity to pursue research. I thank them for their years of guidance that have taught me the substance of our profession. In my early years on the job, Nancy Keating, Barbara McNeil, Josh Metlay, and Katrina Armstrong have generously provided continued support.

I thank my classmates for the friendship, kindness, and encouragement that characterize our community. They include Tisa Sherry, Jacob Wallace, Mike Botta, Daria Pelech, Aaron Schwartz, Hannah Neprash, Beth Wikler, Laura Garabedian, Atheen Venkataramani, and others who have changed our field and whose contributions to society cannot be overstated.

The village that nurtures us often extends beyond a school. Colleagues at the University of Pennsylvania, University of Michigan, Dartmouth, Hopkins, and elsewhere have provided invaluable guidance and mentorship over the years. Colleagues in government, who taught me through policy work, taught even more through their dedication to public service.

I thank the health care providers and staff at my clinic and hospital, whose devotion to our patients grounds me in shared purpose and meaning. Working alongside them is a profound privilege, and has shaped the way I think about health policy. From our primary care clinic to the ICUs, I am indebted to the master clinicians who trained my coresidents and me.

Behind every study is a journey, which often would not occur without research assistants or students. I thank Ozlem Barin, Tim Lillehaugen, Erica Paulos, Lumin Shen, Mia Giuriato, Yunan Ji, Suhas Gondi, Joe Bruch, and others for their collaboration, ingenuity, and hard work. Their future careers and accomplishments are a source of hope for us today.

I thank my many colleagues in IT, finance, and administration at Harvard Medical School and Massachusetts General Hospital who make our collective work possible. They are the unsung heroes who give us data access, manage grants, and keep the lights on. They are the backbone behind an IRB approval or a data use agreement. A seemingly ordinary day seems ordinary because they are extraordinary, and my gratitude goes out to them.

Finally, I thank my family, including my parents, my in-laws, and especially my soulmate Katherine Koh and our daughter Caroline, for the life at home which creates a life at work.

Hope everyone stays healthy and safe.
