The Society for Immunotherapy of Cancer (SITC) Cancer Immunotherapy Winter School is a comprehensive cancer immunotherapy education program, led by experts in the field. Participants will improve their understanding of the core principles of tumor immunology and cancer immunotherapy and examine developing areas in the field.

During the program, participants will learn:

• Core principles of tumor immunology and cancer immunotherapy
• Recent advancements in drug and biomarker technologies and their clinical application
• Appropriate clinical and/or preclinical trial data analysis methods and best practices in clinical and/or preclinical trial design

Attendees are able to tailor their learning experience as the program offers both clinical- and research-focused tracks. In addition to deepening their understanding of integral facets of the field of cancer immunotherapy, attendees will expand their professional network, developing new relationships with faculty and other thought leaders in this intimate setting.

Who should attend?

Individuals working in academic, clinical, industry and government settings, who are:

• Early-to-mid-career scientists and clinicians (graduate students, postdoctoral fellows and clinical fellows)
• New to the field

Program Organizers:

Christian Capitini, MD – University of Wisconsin-Madison
Leisha A. Emens, MD, PhD – UPMC Hillman Cancer Center
Daniel Powell, PhD – University of Pennsylvania

“This is a terrific opportunity for researchers and clinicians, new to the field, to not only deepen their understanding cancer immunotherapy, but to also forge new relationships with colleagues from around the world. Collaboration is a critical component to achieving scientific progress, and this program will seek to lay the foundation for new professional relationships that could blossom into cross-institutional teams in the future.”

— Leisha A. Emens, MD, PhD, SITC Cancer Immunotherapy Winter School Co-Organizer
