

Cancer Immunotherapy Winter School

A COMPREHENSIVE CANCER IMMUNOTHERAPY EDUCATION PROGRAM

Jan. 30–Feb 2, 2024 • Austin, TX • In Person and Virtual

The Society for Immunotherapy of Cancer (SITC) Cancer Immunotherapy Winter School is a comprehensive cancer immunotherapy education program, led by experts in the field. Participants will improve their understanding of the core principles of tumor immunology and cancer immunotherapy and examine developing areas in the field.

During the program, participants will learn:

- Core principles of tumor immunology and cancer immunotherapy
- Recent advancements in drug and biomarker technologies and their clinical application
- Appropriate clinical and/or preclinical trial data analysis methods and best practices in clinical and/or preclinical trial design

Attendees are able to tailor their learning experience as the program offers both clinical- and research-focused tracks. In addition to deepening their understanding of integral facets of the field of cancer immunotherapy, attendees will expand their professional network, developing new relationships with faculty and other thought leaders in this intimate setting.

Who should attend?

Individuals working in academic, clinical, industry and government settings, who are:

- Early-to-mid-career scientists and clinicians (graduate students, postdoctoral fellows and clinical fellows)
- New to the field

Program Organizers:

Justin Eyquem, PhD – *University of California San Francisco*
Chrystal Paulos, PhD – *Winship Cancer Institute at Emory University*
Daniel Powell, PhD – *University of Pennsylvania*

Program Advisor:

Christian Capitini, MD – *University of Wisconsin-Madison*

Continuing Education Credits

Continuing Education Credits will be available for the CIWS 2024 program for physicians, nurses and pharmacists.
