

# An Introduction to Lloyd's Register

Engineering a safer world

# How we started

## Our heritage is genuinely historic

- Formed in 1760 in Edward Lloyd's coffee house to examine and 'classify' merchant ships according to their condition.
- We have over 250 years of global marine history
- The world's first ship classification society and this remains our core activity today.

...and more than 100 years serving other industries across society from energy and food safety to power and manufacturing.

Heritage an important part of our culture and forward-thinking approach to our business

# Making a real difference.

## Critical infrastructure is vital to modern society.

Lloyd's Register Foundation is an independent **global charity** that helps to protect life and property at sea, on land, and in the air.

To do this, we support **education**, engineering-related **research**, **public engagement**, and promote **scientific excellence**.

# Supporting global excellence

£120m	Total grants portfolio (July 2018)
85	Active grants
29	Countries
260	Publications by our grants community 2016
2.64 m	People engaged through our grants programme in 2016
4,525	Printed and digital copies of our Foresight Review distributed in 16/17

International reach of Foundation grants

# Did you know?

## **Blockchain Labs.**

Exploring how these technologies can transform the assurance and safety of shipping's critical infrastructure, and drive new business models.

# Did you know?

## **Safety Accelerator.**

Bringing together start-ups and industry to work together to test innovative digital solutions to the world's toughest safety and risk challenges.

# Did you know?

## MX3D bridge.

World's first 3D printed bridge becomes a 'living laboratory' for research with a vast sensor network.

# Did you know?

## HiLo.

A predictive mathematical model using data to identify risk patterns to avoid major marine casualties.

# Did you know..?

## **Autonomous shipping.**

Joint Foundation and University of York  
£12m partnership programme  
announced, looking at the safety of  
robotics and autonomous systems (RAS).

# The Industry 4.0, revolution

“

*We stand on the brink of a technological revolution that will fundamentally alter the way we live, work, and relate to one another. In its scale, scope, and complexity, the transformation will be unlike anything humankind has experienced before.*

”

**1784**  
Steam Power  
Mechanical  
Production

**1870**  
Electricity  
Mass Production

**1969**  
Electronics  
Automated  
Production

**Today**  
Cloud  
IoT  
Digital

“

*The First Industrial Revolution used water and steam power to mechanize production. The Second used electric power to create mass production. The Third used electronics and information technology to automate production. **Now a Fourth Industrial Revolution is building on the Third, the digital revolution that has been occurring since the middle of the last century. It is characterized by a fusion of technologies that is blurring the lines between the physical, digital, and biological spheres.***

”

- **Klaus Schwab**, Founder & Executive Chairman, World Economic Forum

DATA COLLECTION AND MONITORING  
ENGINE DIAGNOSTIC SYSTEM  
REMOTE SUPPORT

WIDE is a comprehensive, integrated system for creating value from engine and ship data. WIDE allows the collection and analysis of ship and machinery data to predict component malfunctions, and support with live troubleshooting and diagnostic advice to the crew.

Fig. 1. The WIDE WIDE process

WIDE is based on the Data Collection Monitoring (DCM) unit for collecting and visualising the engine and ship data, as well as the Engine Diagnostic System (EDS) software. It analyses the data and creates valuable information.

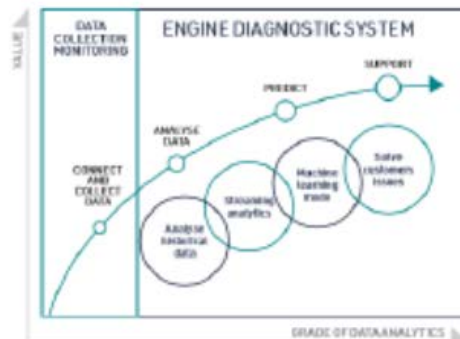

Fig. 2. The WIDE integrated digital expert path to value

These capabilities are integrated into a user-friendly on-board system comprising state-of-the-art hardware, expert software, and efficient data analytics techniques.

# Calendar Based, Preventive Maintenance

- Planned Maintenance Routines are typically built up from Original Equipment Manufacturer (OEM) recommendations in isolation from the specific application or asset.
- Little justification for maintenance interval and typically resistance to change without a good justification
- Maintenance burden typically remains constant over asset life despite changing production or use of the application and/or economic circumstances

# Reliability Centred Maintenance(RCM)

---

- RCM is a methodology that answers the following questions to determine an appropriate maintenance regime...
  1. What is the item supposed to do and its associated performance standards?
  2. In what ways can it fail to provide the required functions?
  3. What are the events that cause each failure?
  4. What happens when each failure occurs?
  5. In what way does each failure matter?
  6. What systematic task can be performed proactively to prevent, or to diminish to a satisfactory degree, the consequences of the failure?
  7. What must be done if a suitable preventive task cannot be found?

# Risk Based Inspection (RBI), Risk Based Mechanical Inspection (RBMI)

Maintenance determined by knowledge of the asset (design, functionality, operation) and past asset failure modes (consequence, occurrence).

Resource intensive (level of expertise, time spent) and requires continued commitment to update the initial results i.e. a feedback loop to determine if the inspection, maintenance processes are effective.

## RBI Process

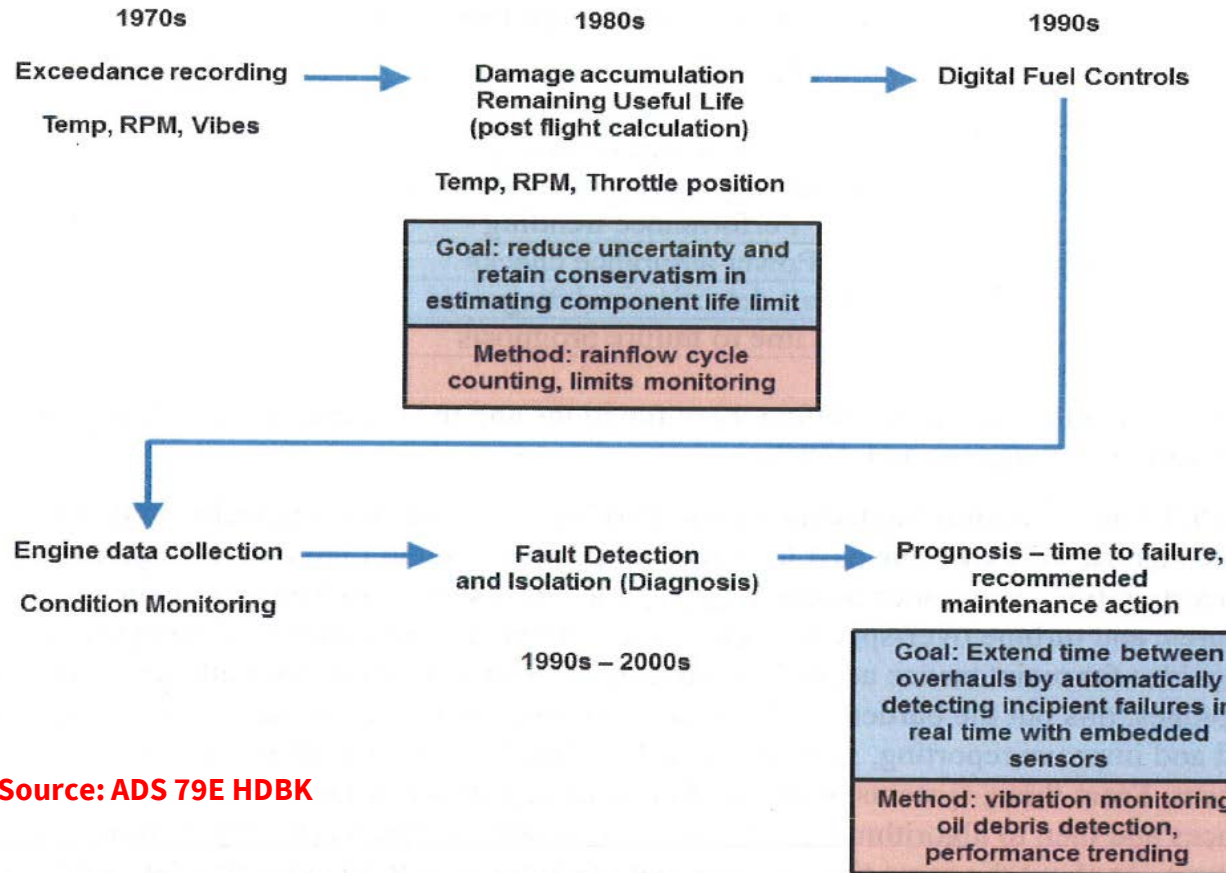

# Condition Monitoring – Individualised, Periodic Insights

Monitoring uses real-time data. The SME collects and process the data to generate **the periodic “Condition Monitoring Report”**. The better the knowledge and experience of the SME - the higher the value of the information

ISO 13379-1 showing Sensing Techniques and Analytics

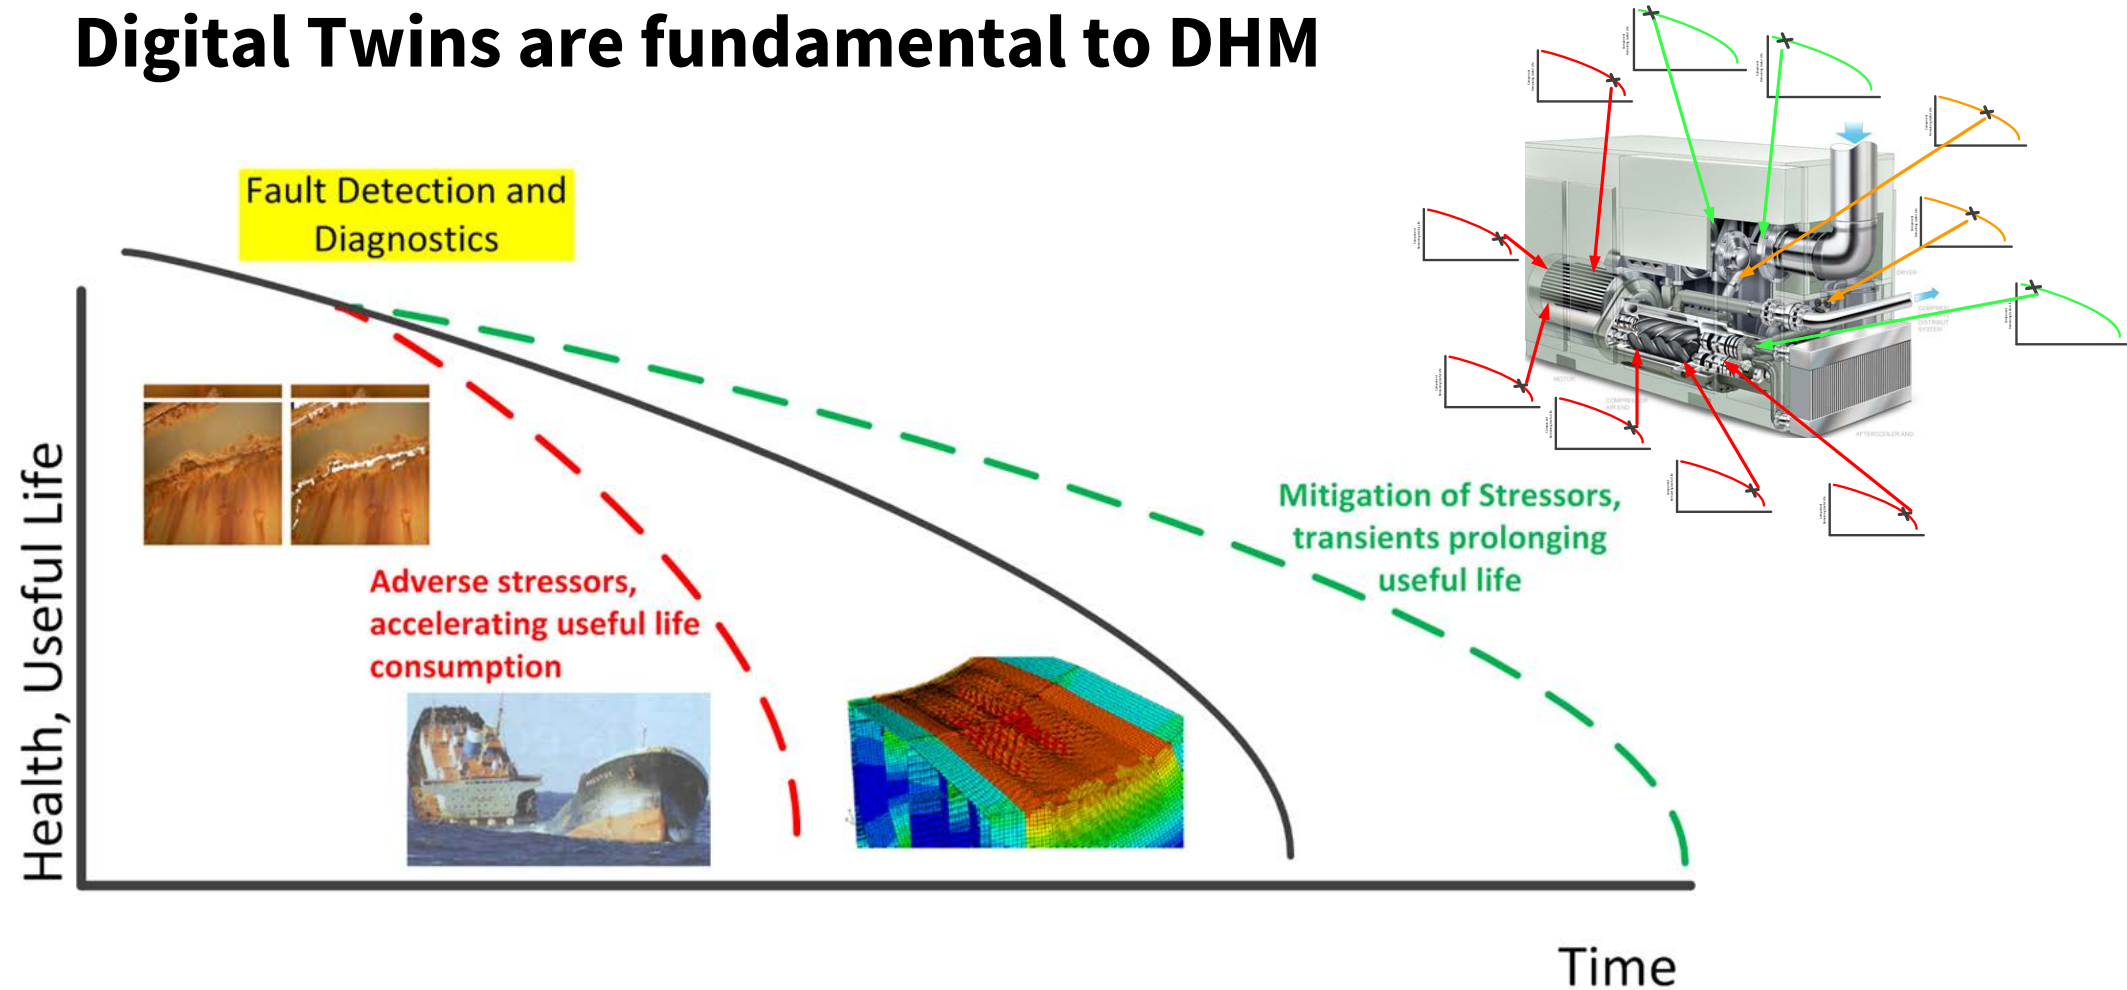

Today sensing, connectivity, computing and UI/UX hardware are more sophisticated and affordable than ever.

Furthermore the increasing use of algorithms – both physics based and data driven has grown exponentially.

# Digital Health Management (DHM) Technology

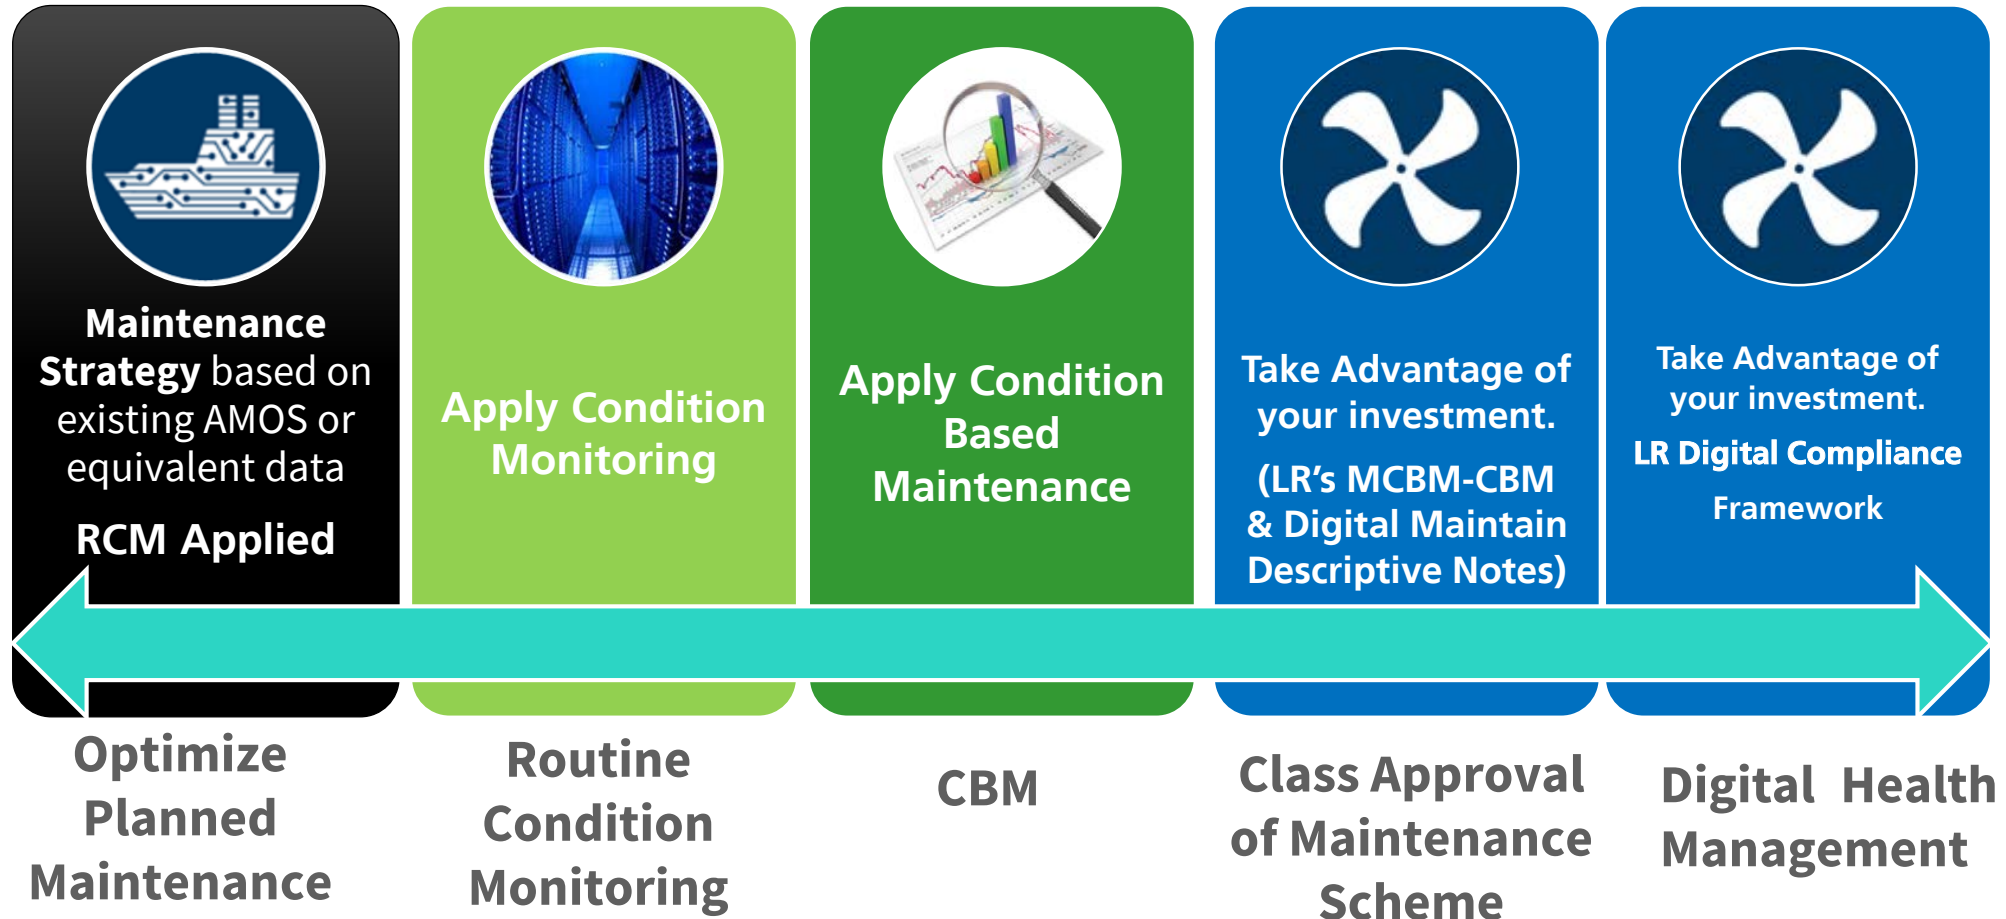

## Digital Twins are fundamental to DHM

# Roadmap to Systems Effectiveness & Maintenance Optimisation

An aerial photograph of a tropical coastline. The image shows a series of white sand beaches and coral reefs meeting the turquoise ocean. The water transitions from a light, shallow turquoise near the shore to a deeper blue further out. The land is covered in lush green vegetation. The overall scene is serene and picturesque.

# **Why Digital Health Management?**

# DHM (and Autonomy too!) Disrupted the Space Industry

*Autonomy and DHM (i.e. reusable rockets) are the two biggest reasons why Space X and their contemporaries can launch assets into space 80% cheaper than United Launch Alliance and other incumbents.*

## Space X Falcon 9

# DHM Benefits a Spectrum of Maritime Stakeholders

---

## **Maintenance engineers and Chief Engineer**

- Opportunistic maintenance
- Maximise uptime
- Minimise unnecessary maintenance

## **Vessel Superintendent**

- Spares Positioning
- Reduced Spares Count
- Logistics Efficiency

## **Flag Administration**

- Increase Asset Safety
- Eliminate Catastrophic Failures

## **Manufacturers, Shipyards, Service Providers**

- Re-defining and exceeding customer expectations
- "As a service" business models
- Through-life monetisation of asset activities.

## **Shipping Company Managing/Technical Director**

- Best Lifecycle Cost
- Business Planning
- Maximising Capability

## **Insurers**

- Enhancement of actuarial science, accurate pricing of risks
- Objective evidence for claims
- Better management of insurance premiums
