

SPE WORKSHOP

SPE Workshop: Multiphase Metering Opportunities and Solutions

May 2026 | San Antonio, Texas

Explore. Connect. Innovate.

The SPE Multiphase Metering Workshop brings together operators, researchers, and technology experts to share real-world experiences and shape the future of flow measurement. Join discussions on emerging technologies, validation methods, and practical solutions that are redefining multiphase metering.

Key Topics

- Advances in multiphase metering technology and field validation
- Flow-loop testing and performance verification
- Integration of AI/ML in measurement and modelling
- Future trends in digitalization, emissions monitoring, and standards

Who Should Attend

- Measurement specialists
- Production and process engineers
- R&D professionals
- Service providers
- Academia
- Anyone committed to improving accuracy, reliability, and innovation in multiphase flow measurement

Why Attend

- Take part in informative, industry-shaping discussions
- Stay informed about recent evolution of multiphase flow measurement in North America unconventional plays
- Multiphase flow measurement adoption, performance and applications in unconventional plays
- Measurement validation workflows and data analytics
- Production Facilities new designs/concepts and ESG impact
- Learn and share best practices
- Experience unparalleled networking opportunities with other industry experts

Sponsorship Opportunities

The workshop offers a unique branding and marketing opportunity through sponsorships to reach an average of 100 attendees – a focused group of key decision makers and an informed audience.

Sponsoring opportunities range from USD 3000 to USD 8000 – customized packages to fit your needs/budget can also be explored.
